- If accessories are required

Using the Catalog Number Selection Chart

Use the charts on pages 10…15 determine the catalog number.

1. Select a 1-, 2-, or 3- pole device.
2. If needed, select the Switched Neutral Module. The Switched Neutral Module is mounted on the right side of the breaker. This module must be mounted at the factory. It cannot be installed in the field.
3. If applicable, consider derating factors as noted on pages 8 and 9.
4. Order accessory contacts or modules as separate items. Accessory modules are always mounted on the left side of the supplemental protector/miniature circuit breaker. A maximum of two accessory modules can be mounted on a single device. See table on page 17 for possible combinations.

Determining Ratings

The standard tripping characteristic for Bulletin 1492-SP is Type C. Type C has a magnetic trip activated at 5…10 times the rated current of the circuit breaker. The reference temperature for the thermal tripping characteristics is 30° C. The Type C characteristic will suit most applications. Use the following steps to determine the current rating for the breaker.

1. Take the rated current of the equipment. For example, 10 A.
2. Take the ambient temperature of the 1492-SP location. For example, 50°C (122°F).
3. Refer to the table below which rerates the 1492-SP for the given ambient.

Rerated current at higher ambients

Influence of the ambient temperature on the thermal tripping characteristic

Note: The table shows the corrected values of the rated current dependent on the ambient temperature.

Device Marked Current Rating	**Rated heat dissipation/pole**	**I_n [A] at Higher Ambient Temperature**					
I_n [A] @ 30°C	[W]	35° C	40° C	45° C	50° C	55° C	60° C
0.5	1.2	0.5	0.5	0.5	0.5	0.5	0.4
1	1.3	1.0	1.0	0.9	0.9	0.9	0.9
2	1.4	2.0	1.9	1.9	1.8	1.8	1.8
3	1.2	2.9	2.9	2.8	2.8	2.7	2.6
4	1.2	3.9	3.8	3.8	3.7	3.6	3.5
6	1.8	5.9	5.8	5.6	5.5	5.4	5.3
10	2.1	9.8	9.6	9.4	9.2	9.0	8.8
13	2.3	12.7	12.5	12.2	12.0	11.7	11.4
16	2.0	15.7	15.4	15.0	14.7	14.4	14.1
20	2.9	19.6	19.2	18.8	18.4	18.0	17.6
25	3.1	24.5	24.0	23.5	23.0	22.5	22.0
32	3.1	31.4	30.7	30.1	29.4	28.8	28.2
40	4.2	39.2	38.4	37.6	36.8	36.0	35.2
50	4.6	49.0	48.0	47.0	46.0	45.0	44.0
63	5.3	61.7	60.5	59.2	58.0	56.7	55.4

Determining Ratings, Continued

4. Select the 1492-SP with the next available rating at the given ambient. In this example it would be 13 A. With this selection, adequate overload protection is provided and nuisance tripping by thermal influences is avoided.
5. Check that transients of the system do not exceed the "must hold" value of the trip characteristic. This will eliminate nuisance tripping by magnetic influences. The Type C characteristic will be adequate for most applications. See page 22 for tripping characteristics.

   In rare occurrences when the Type C characteristic does not fully meet the application, the following additional magnetic trip characteristics are available:

   Type D allows for transients approximately twice as high as the standard Type C. See page 22 for tripping characteristics.

   Type B achieves instantaneous tripping at current levels approximately half as high as Type D. See Page 22 for tripping characteristics.

6. When multiple supplementary protectors are mounted side by side, they must be derated to determine the load carrying capacity.

   Adjusted current rating = Rated current multiplied by α.

Rated diversity factor, where miniature circuit breakers mounted side by side influence one another thermally at rated load.

Technical Information

The Benefits of Limiting Let-Through-Energy

Bulletin 1492-SP vs. Conventional Breakers

The 1492-SP line features the unique ability to achieve short circuit interruptions far more effectively than conventional breakers.

In *conventional circuit breakers*, the short circuit interruption time required is approximately one or two half cycles of an AC sine wave. When the contacts open, the resulting arc continues to burn until the current level passes through zero. The arc may re-ignite because of the insufficient width of the contact gap. The current that flows until the arc is extinguished produces a heating effect proportional to the I^2t value *(let-through-energy)* of the fault current.

The 1492-SP device is designed to substantially reduce the amount of *let-through-current* and the resulting *let-through-energy* that can damage protected components. The Bulletin 1492-SP has the ability to interrupt short circuit current within the first half cycle of the fault.

Limiting let-through-energy will protect against the harmful effects of overcurrent and is focused primarily on avoiding the following:

- Excessive Heat
- Mechanical Damage

Both of these factors are proportional to the square of the current. Thermal energy is proportional to the square of the RMS value and magnetic forces are proportional to the square of the peak value. The most effective way to provide protection is to substantially limit *let-through-energy*. This provides the following advantages:

- Far less damage at the location of the short circuit.
- Fast electric separation of a faulty unit from the system, especially power supplies connected in parallel that are switched off when the voltage of the power bus drops below a certain level.
- Far less wear on the miniature circuit breaker itself. This means more safe interruptions.
- Better protection of all components in the short circuit path.
- Far wider range of selective action when used with an upstream protective device. (No nuisance shut downs from feeder line interruptions, causing a blackout in all connected branches.)

User Manual

Rockwell Automation

Important User Information

Solid state equipment has operational characteristics differing from those of electromechanical equipment. *Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls* (Publication SGI-1.1 available from your local Rockwell Automation sales office or online at **http://www.rockwellautomation.com/literature**) describes some important differences between solid state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc. is prohibited.

Throughout this manual, when necessary we use notes to make you aware of safety considerations.

WARNING: Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

Important: Identifies information that is critical for successful application and understanding of the product.

ATTENTION: Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you:

- identify a hazard
- avoid the hazard
- recognize the consequences

Shock Hazard labels may be located on or inside the equipment (e.g., drive or motor) to alert people that dangerous voltage may be present.

Burn Hazard labels may be located on or inside the equipment (e.g., drive or motor) to alert people that surfaces may be at dangerous temperatures.

PowerFlex is a registered trademark of Rockwell Automation, Inc.
DriveExplorer, DriveExecutive, and SCANport are trademarks of Rockwell Automation, Inc.
PLC is a registered trademark of Rockwell Automation, Inc.

The information below summarizes the changes to the PowerFlex 70 User Manual since the February 2005 release.

Parameter Updates

The following parameters have been added or updated with firmware version 3.002.

Parameter	Number	Description	Page
[Torque Estimate]	015	New	3-12
[Motor OL Mode]	050	New	3-14

Overview

The purpose of this manual is to provide you with the basic information needed to install, start-up and troubleshoot the PowerFlex 70 Adjustable Frequency AC Drive.

For information on...	See page...
Who Should Use this Manual?	P-1
What Is Not in this Manual	P-1
Reference Materials	P-2
Manual Conventions	P-2
Drive Frame Sizes	P-3
General Precautions	P-3
Catalog Number Explanation	P-5

Who Should Use this Manual?

This manual is intended for qualified personnel. You must be able to program and operate Adjustable Frequency AC Drive devices. In addition, you must have an understanding of the parameter settings and functions.

What Is Not in this Manual

The *Power*Flex 70 User Manual is designed to provide only basic start-up information. For detailed drive information, please refer to the *PowerFlex Reference Manual*, publication PFLEX-RM001…. The reference manual is included on the CD supplied with your drive or is also available online at **http://www.rockwellautomation.com/literature**.

Reference Materials

The following manuals are recommended for general drive information:

Title	Publication	Available Online at …
Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives	DRIVES-IN001…	**www.rockwellautomation.com/literature**
Preventive Maintenance of Industrial Control and Drive System Equipment	DRIVES-TD001…	
Safety Guidelines for the Application, Installation and Maintenance of Solid State Control	SGI-1.1	
A Global Reference Guide for Reading Schematic Diagrams	100-2.10	
Guarding Against Electrostatic Damage	8000-4.5.2	

For detailed PowerFlex 70 information:

Title	Publication	Available …
PowerFlex Reference Manual	PFLEX-RM001…	on the CD supplied with the drive or at **www.rockwellautomation.com/literature**

For Allen-Bradley Drives Technical Support:

Title	Online at …
Allen-Bradley Drives Technical Support	**www.ab.com/support/abdrives**

Manual Conventions

- In this manual we refer to the PowerFlex 70 Adjustable Frequency AC Drive as; drive, PowerFlex 70 or PowerFlex 70 Drive.
- To help differentiate parameter names and LCD display text from other text, the following conventions will be used:
  - Parameter Names will appear in [brackets].
    For example: [DC Bus Voltage].
  - Display Text will appear in “quotes.” For example: “Enabled.”
- The following words are used throughout the manual to describe an action:

Word	Meaning
Can	Possible, able to do something
Cannot	Not possible, not able to do something
May	Permitted, allowed
Must	Unavoidable, you must do this
Shall	Required and necessary
Should	Recommended
Should Not	Not recommended

Drive Frame Sizes

Similar PowerFlex 70 drive sizes are grouped into frame sizes to simplify spare parts ordering, dimensioning, etc. A cross reference of drive catalog numbers and their respective frame size is provided in Appendix A.

General Precautions

ATTENTION: This drive contains ESD (Electrostatic Discharge) sensitive parts and assemblies. Static control precautions are required when installing, testing, servicing or repairing this assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with static control procedures, reference A-B publication 8000-4.5.2, "Guarding Against Electrostatic Damage" or any other applicable ESD protection handbook.

ATTENTION: An incorrectly applied or installed drive can result in component damage or a reduction in product life. Wiring or application errors, such as, undersizing the motor, incorrect or inadequate AC supply, or excessive ambient temperatures may result in malfunction of the system.

ATTENTION: Only qualified personnel familiar with adjustable frequency AC drives and associated machinery should plan or implement the installation, start-up and subsequent maintenance of the system. Failure to comply may result in personal injury and/or equipment damage.

ATTENTION: To avoid an electric shock hazard, verify that the voltage on the bus capacitors has discharged before performing any work on the drive. Measure the DC bus voltage at the +DC terminal of the Power Terminal Block and the -DC test point (refer to Chapter 1 for locations). The voltage must be zero.

ATTENTION: Risk of injury or equipment damage exists. DPI or SCANport host products must not be directly connected together via 1202 cables. Unpredictable behavior can result if two or more devices are connected in this manner.

ATTENTION: A risk of injury or equipment damage exists in firmware version 1.011 and earlier. When there is a combination of long shielded motor cables, high source impedance, low speed, light motor load and parameter 190 [Direction Mode] is set to "Unipolar" or "Bipolar," an unexpected change in motor direction may occur. If these conditions exist, choose one of the following corrective actions:

- Set parameter 190 to "Reverse Dis"
- Set parameters 161 and 162 to "Disabled"
- Install a properly sized Dynamic Brake resistor

ATTENTION: Nuisance tripping may occur in Standard Control firmware version 1.011 and earlier due to unstable currents. When using a motor that is connected for a voltage that is different from the drive (e.g., using a 230V connected motor with a 460V drive) the following adjustment must be made to "Stability Gain" using DriveExplorer software and a personal computer.

$$\frac{\text{Motor Nameplate Voltage}}{\text{Drive Rated Voltage}} \times 128$$

Any adjustment made to "Stability Gain" must be manually restored if the drive is reset to defaults or is replaced.

If unstable currents are still present after making the adjustment, contact the factory for assistance.

ATTENTION: The "adjust freq" portion of the bus regulator function is extremely useful for preventing nuisance overvoltage faults resulting from aggressive decelerations, overhauling loads, and eccentric loads. It forces the output frequency to be greater than commanded frequency while the drive's bus voltage is increasing towards levels that would otherwise cause a fault; however, it can also cause either of the following two conditions to occur.

1. Fast positive changes in input voltage (more than a 10% increase within 6 minutes) can cause uncommanded positive speed changes; however an "OverSpeed Limit" fault will occur if the speed reaches [Max Speed] + [Overspeed Limit]. If this condition is unacceptable, action should be taken to 1) limit supply voltages within the specification of the drive and, 2) limit fast positive input voltage changes to less than 10%. Without taking such actions, if this operation is unacceptable, the "adjust freq" portion of the bus regulator function must be disabled (see parameters 161 and 162).
2. Actual deceleration times can be longer than commanded deceleration times; however, a "Decel Inhibit" fault is generated if the drive stops decelerating altogether. If this condition is unacceptable, the "adjust freq" portion of the bus regulator must be disabled (see parameters 161 and 162). In addition, installing a properly sized dynamic brake resistor will provide equal or better performance in most cases.

Note: These faults are not instantaneous and have shown test results that take between 2 and 12 seconds to occur.

Installation/Wiring

This chapter provides information on mounting and wiring the PowerFlex 70 Drive.

For information on...	See page
Opening the Cover	1-1
Mounting Considerations	1-2
AC Supply Source Considerations	1-3
General Grounding Requirements	1-4
Fuses and Circuit Breakers	1-5
Power Wiring	1-5
Using Input/Output Contactors	1-10

For information on...	See page
Disconnecting MOVs and Common Mode Capacitors	1-11
I/O Wiring	1-12
Speed Reference Control	1-19
Auto/Manual Examples	1-20
EMC Instructions	1-21

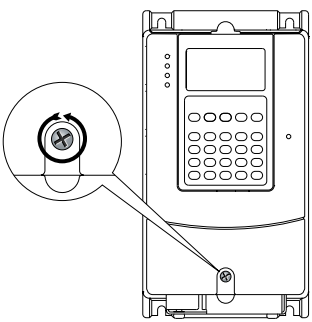
Most start-up difficulties are the result of incorrect wiring. Every precaution must be taken to assure that the wiring is done as instructed. All items must be read and understood before the actual installation begins.

ATTENTION: The following information is merely a guide for proper installation. Rockwell Automation, Inc. cannot assume responsibility for the compliance or the noncompliance to any code, national, local or otherwise for the proper installation of this drive or associated equipment. A hazard of personal injury and/or equipment damage exists if codes are ignored during installation.

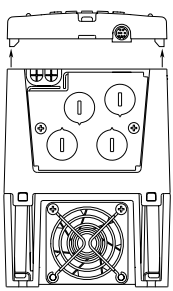
Opening the Cover

IP 20 (NEMA Type 1)

1. Loosen cover screw.

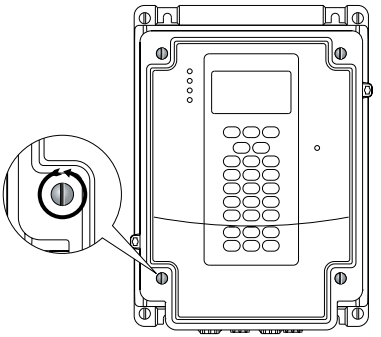


2. Pull cover straight off chassis to avoid damaging connector pins.

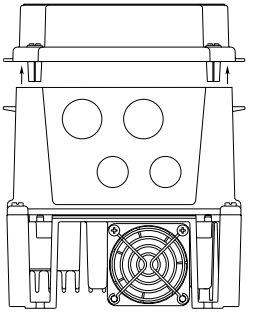


IP 66 (NEMA Type 4X/12)

1. Loosen the cover screws.



2. Pull cover straight off chassis.



Important: Torque cover screws to 0.79 N-m (7 lb.-in.).

Mounting Considerations

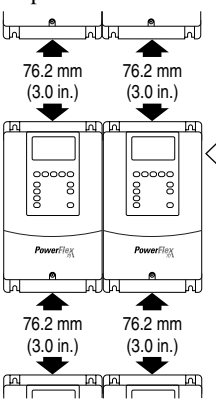
Maximum Surrounding Air Temperature

Enclosure Rating	Temperature Range
Open Type, IP 20, NEMA Type 1 & Flange Mount	0 to 50 degrees C (32 to 122 degrees F)
IP 66 & NEMA Type 4X/12	0 to 40 degrees C (32 to 104 degrees F)
IP 54 & NEMA Type 12	0 to 40 degrees C (32 to 104 degrees F)

Important: Some drives are equipped with an adhesive label on the top of the chassis. Removing the adhesive label from the drive changes the NEMA enclosure rating from Type 1 Enclosed to Open Type.

Minimum Mounting Clearances

Specified vertical clearance requirements are intended to be from drive to drive. Other objects can occupy this space; however, reduced airflow may cause protection circuits to fault the drive. In addition, inlet air temperature must not exceed the product specification.



Clearances apply to all PowerFlex 70 Drives:

- Panel Mount
- Flange Mount
- NEMA Type 4X/12

AC Supply Source Considerations

PowerFlex 70 drives are suitable for use on a circuit capable of delivering up to a maximum of 200,000 rms symmetrical amperes, and a maximum of 600 volts.

ATTENTION: To guard against personal injury and/or equipment damage caused by improper fusing or circuit breaker selection, use only the recommended line fuses/circuit breakers specified in Appendix A.

If a system ground fault monitor (RCD) is to be used, only Type B (adjustable) devices should be used to avoid nuisance tripping.

Unbalanced, Ungrounded, Resistive or B Phase Grounded Distribution Systems

If phase to ground voltage will exceed 125% of normal line to line voltage or the supply system is ungrounded, refer to the *Wiring and Grounding Guidelines for AC Drives* (publication DRIVES-IN001).

ATTENTION: PowerFlex 70 drives contain protective MOVs and common mode capacitors that are referenced to ground. These devices must be disconnected if the drive is installed on an ungrounded, resistive or B phase grounded distribution system. See page 1-11 for jumper locations.

Input Power Conditioning

Certain events on the power system supplying a drive can cause component damage or shortened product life. These conditions are divided into 2 basic categories:

1. **All drives**
   - The power system has power factor correction capacitors switched in and out of the system, either by the user or by the power company.
   - The power source has intermittent voltage spikes in excess of 6000 volts. These spikes could be caused by other equipment on the line or by events such as lightning strikes.
   - The power source has frequent interruptions.
2. **5 HP or Less Drives (in addition to "1" above)**
   - The nearest supply transformer is larger than 100kVA or the available short circuit (fault) current is greater than 100,000A.
   - The impedance in front of the drive is less than 0.5%.

If any or all of these conditions exist, it is recommended that the user install a minimum amount of impedance between the drive and the

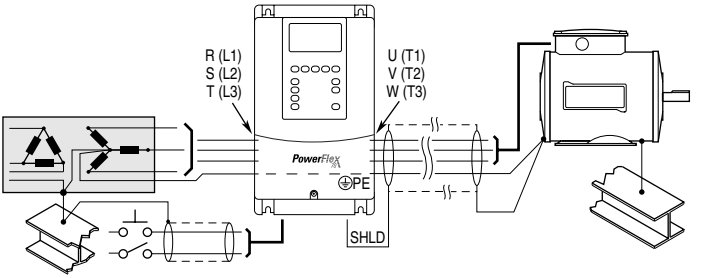
source. This impedance could come from the supply transformer itself, the cable between the transformer and drive or an additional transformer or reactor. The impedance can be calculated using the information supplied in the *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*, publication DRIVES-IN001….

General Grounding Requirements

The drive Safety Ground - PE must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be periodically checked.

For installations within a cabinet, a single safety ground point or ground bus bar connected directly to building steel should be used. All circuits including the AC input ground conductor should be grounded independently and directly to this point/bar.

Figure 1.1 Typical Grounding



Safety Ground - PE

This is the safety ground for the drive that is required by code. This point must be connected to adjacent building steel (girder, joist), a floor ground rod or bus bar (see above). Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

Shield Termination - SHLD

The Shield terminal (see Figure 1.2 on page 1-8) provides a grounding point for the motor cable shield. The **motor cable** shield should be connected to this terminal on the drive (drive end) and the motor frame (motor end). A shield terminating cable gland may also be used.

When shielded cable is used for **control and signal wiring**, the shield should be grounded at the source end only, not at the drive end.

RFI Filter Grounding

Using an optional RFI filter may result in relatively high ground leakage currents. Therefore, the **filter must only be used in installations with grounded AC supply systems and be permanently installed and solidly grounded** (bonded) to the building power distribution ground. Ensure that the incoming supply neutral is solidly connected (bonded) to the same building power distribution ground. Grounding must not rely on flexible cables and should not include any form of plug or socket that would permit inadvertent disconnection. Some local codes may require redundant ground connections. The integrity of all connections should be periodically checked. Refer to the instructions supplied with the filter.

Fuses and Circuit Breakers

The PowerFlex 70 can be installed with either input fuses or an input circuit breaker. National and local industrial safety regulations and/or electrical codes may determine additional requirements for these installations. Refer to Appendix A for recommended fuses/circuit breakers.

ATTENTION: The PowerFlex 70 does not provide branch short circuit protection. Specifications for the recommended fuse or circuit breaker to provide protection against short circuits are provided in Appendix A.

Power Wiring

ATTENTION: National Codes and standards (NEC, VDE, BSI etc.) and local codes outline provisions for safely installing electrical equipment. Installation must comply with specifications regarding wire types, conductor sizes, branch circuit protection and disconnect devices. Failure to do so may result in personal injury and/or equipment damage.

Cable Types Acceptable for 200-600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 meters (1 foot) for every 10 meters (32.8 feet) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than 15 mils (0.4 mm/0.015 in.). Use copper wire only. Wire gauge requirements and recommendations are based on 75 degree C. Do not reduce wire gauge when using higher temperature wire.

Unshielded

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas**. Any wire chosen must have a minimum insulation thickness of 15 mils and should not have large variations in insulation concentricity.

Shielded/Armored Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC Drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications / networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to Reflected Wave in *Wiring and Grounding Guidelines for PWM AC Drives*, publication DRIVES-IN001.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Table 1.A Recommended Shielded Wire

Location	Rating/Type	Description
Standard (Option 1)	600V, 90°C (194°F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	• Four tinned copper conductors with XLPE insulation. • Copper braid/aluminum foil combination shield and tinned copper drain wire. • PVC jacket.
Standard (Option 2)	Tray rated 600V, 90°C (194°F) RHH/RHW-2 Anixter OLF-7xxxxx or equivalent	• Three tinned copper conductors with XLPE insulation. • 5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield. • PVC jacket.
Class I & II; Division I & II	Tray rated 600V, 90°C (194°F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	• Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. • Black sunlight resistant PVC jacket overall. • Three copper grounds on #10 AWG and smaller.

EMC Compliance

Refer to EMC Instructions on page 1-21 for details.

Cable Trays and Conduit

If cable trays or large conduits are to be used, refer to guidelines presented in *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*, publication DRIVES-IN001.

ATTENTION: To avoid a possible shock hazard caused by induced voltages, unused wires in the conduit must be grounded at both ends. For the same reason, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled. This will help minimize the possible shock hazard from “cross coupled” motor leads.

Motor Cable Lengths

Typically, motor lead lengths less than 30 meters (approximately 100 feet) are acceptable. However, if your application dictates longer lengths, refer to *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives* for details.

Single-Phase Input Power

The PowerFlex 70 drive is typically used with a three-phase input supply. The drive has been listed by U.L. to operate on single-phase input power with the following requirement:

- Output current is derated by 50% of the three-phase ratings identified in Tables A.B through A.D.

Power Terminal Block

Figure 1.2 Typical Power Terminal Block Location (B Frame Shown)

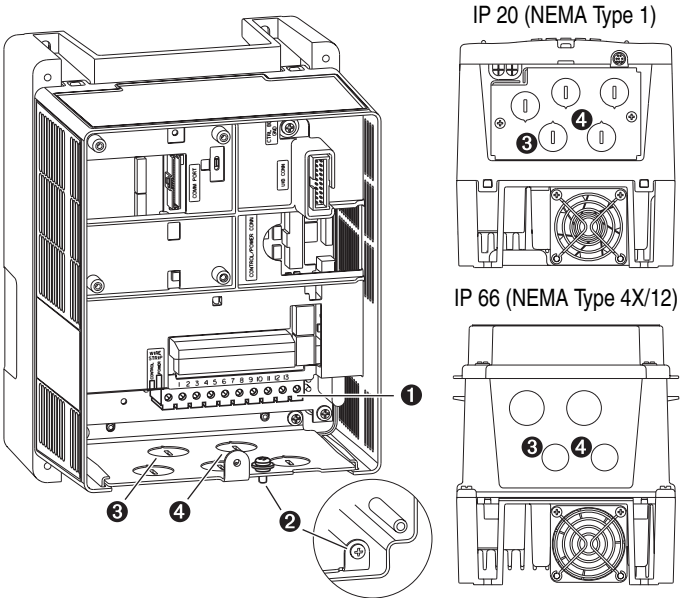


Table 1.B Power Terminal Block Specifications

No.	Name	Description	Frame	Wire Size Range[1] Maximum	Wire Size Range[1] Minimum	Torque Maximum	Torque Recommended
❶	Power Terminal Block	Input power and motor connections	A, B, & C	3.5 mm^2 (12 AWG)	0.3 mm^2 (22 AWG)	0.66 N-m (5.5 lb.-in.)	0.6 N-m (5 lb.-in.)
			D	8.4 mm^2 (8 AWG)	0.8 mm^2 (18 AWG)	1.7 N-m (15 lb.-in.)	1.4 N-m (12 lb.-in.)
			E	25.0 mm^2 (3 AWG)	2.5 mm^2 (14 AWG)	2.71 N-m (24 lb.-in.)	2.71 N-m (24 lb.-in.)
❷	SHLD terminal	Terminating point for wiring shields	All	—	—	1.6 N-m (14 lb.-in.)	1.6 N-m (14 lb.-in.)

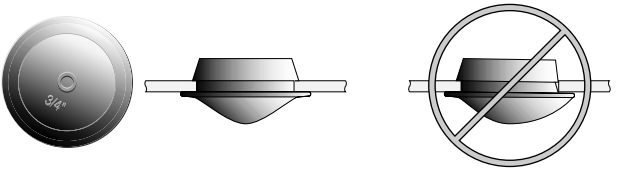
IP66 (NEMA Type 4X/12) Installations

Use the plugs supplied with IP66 (NEMA Type 4X/12) rated drives to seal unused holes in the conduit entry plate.

Important: Completely seat the plug inner rim for the best seal.



Using Input/Output Contactors

Input Contactor Precautions

ATTENTION: A contactor or other device that routinely disconnects and reapplies the AC line to the drive to start and stop the motor can cause drive hardware damage. The drive is designed to use control input signals that will start and stop the motor. If an input device is used, operation must not exceed one cycle per minute or drive damage will occur.

ATTENTION: The drive start/stop/enable control circuitry includes solid state components. If hazards due to accidental contact with moving machinery or unintentional flow of liquid, gas or solids exist, an additional hardwired stop circuit may be required to remove the AC line to the drive. An auxiliary braking method may be required.

Output Contactor Precaution

ATTENTION: To guard against drive damage when using output contactors, the following information must be read and understood. One or more output contactors may be installed between the drive and motor(s) for the purpose of disconnecting or isolating certain motors/loads. If a contactor is opened while the drive is operating, power will be removed from the respective motor, but the drive will continue to produce voltage at the output terminals. In addition, reconnecting a motor to an active drive (by closing the contactor) could produce excessive current that may cause the drive to fault. If any of these conditions are determined to be undesirable or unsafe, an auxiliary contact on the output contactor should be wired to a drive digital input that is programmed as “Enable.” This will cause the drive to execute a coast-to-stop (cease output) whenever an output contactor is opened.

Disconnecting MOVs and Common Mode Capacitors

PowerFlex 70 drives contain protective MOVs and common mode capacitors that are referenced to ground. To guard against drive damage, these devices should be disconnected if the drive is installed on an ungrounded distribution system where the line-to-ground voltages on any phase could exceed 125% of the nominal line-to-line voltage. To disconnect these devices, remove all the jumper(s) shown in the figure and table below. See the *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*, publication DRIVES-IN001, for more information on ungrounded system installation.

ATTENTION: To avoid an electric shock hazard, verify that the voltage on the bus capacitors has discharged before removing/installing jumpers. Measure the DC bus voltage at the +DC terminal of the Power Terminal Block and the -DC test point. The voltage must be zero.

Figure 1.6 Typical Jumper Locations (C Frame Shown)

A	N/A	
B	JP6 – JP5	Common Mode Capacitors to Ground
C and D	JP3B – JP3A	Common Mode Capacitors to Ground
E	JP3 – JP4	Common Mode Capacitors to Ground

I/O Wiring

Important points to remember about I/O wiring:

- Use copper wire only. Wire gauge requirements and recommendations are based on 75 degree C. Do not reduce wire gauge when using higher temperature wire.
- Wire with an insulation rating of 600V or greater is recommended.
- Control and signal wires should be separated from power wires by at least 0.3 meters (1 foot).

Important: I/O terminals labeled "(–)" or "Common" are not referenced to earth ground and are designed to greatly reduce common mode interference. Grounding these terminals can cause signal noise.

ATTENTION: Configuring an analog input for 0-20mA operation and driving it from a voltage source could cause component damage. Verify proper configuration prior to applying input signals.

ATTENTION: Hazard of personal injury or equipment damage exists when using bipolar input sources. Noise and drift in sensitive input circuits can cause unpredictable changes in motor speed and direction. Use speed command parameters to help reduce input source sensitivity.

Signal and Control Wire Types

Table 1.D Recommended Signal Wire

Signal Type	Wire Type(s)	Description	Minimum Insulation Rating
Analog I/O	Belden 8760/9460 (or equiv.)	0.750 mm^2 (18 AWG), twisted pair, 100% shield with drain(1).	300V, 75-90 degrees C (167-194 degrees F)
	Belden 8770 (or equiv.)	0.750 mm^2 (18 AWG), 3 conductor, shielded for remote pot only.	
Encoder	Belden 9728 (or equiv.)	0.196 mm^2 (24 AWG), individually shielded.	
EMC Compliance	Refer to EMC Instructions on page 1-21 for details.		

(1) If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

Table 1.E Recommended Control Wire for Digital I/O

	Wire Type(s)	Description	Minimum Insulation Rating
Unshielded	Per US NEC or applicable national or local code	—	300V, 60 degrees C (140 degrees F)
Shielded	Multi-conductor shielded cable such as Belden 8770 (or equiv.)	0.750 mm^2 (18 AWG), 3 conductor, shielded.	

I/O Terminal Block

Figure 1.9 Typical I/O Terminal Block Location (B Frame Shown)

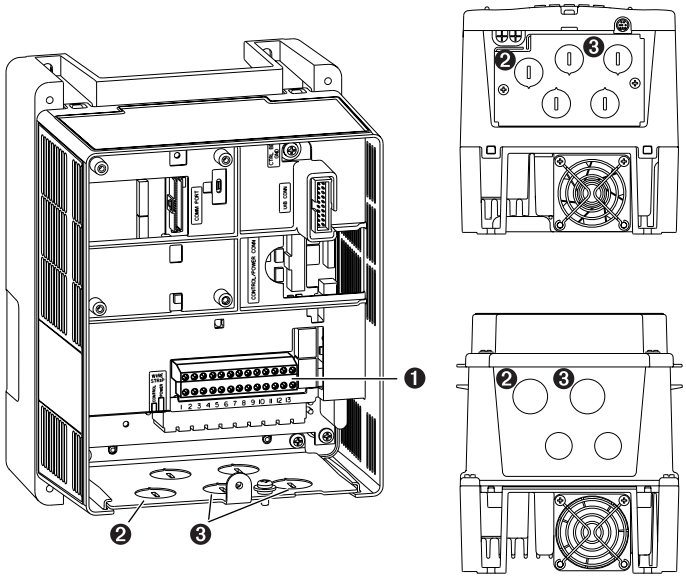

Table 1.F I/O Terminal Block Specifications

No.	Name	Description	Wire Size Range(1)		Torque	
			Maximum	Minimum	Maximum	Recommended

18	Analog In 2 (– Volts)	(2) Voltage – Reads value at 18 & 19	Isolated, bipolar, differential, 0 to +10V unipolar (10 bit) or ±10V bipolar (10 bit & sign), 100k ohm input impedance.(4)	
19	Analog In 2 (+ Volts)			
20	Analog In 2 (– Current)		Isolated, 4-20mA, 10 bit & sign, 100 ohm input impedance.(4)	
21	Analog In 2 (+ Current)			
22	10V Pot Common Analog Out (– Volts) Analog Out (– Current)	(2) Output Freq	0 to +10V, 10 bit, 10k ohm (2k ohm minimum) load. 0 to 20mA, 10 bit, 400 ohm maximum load.(5) Referenced to chassis ground.	340 - 344
23	Analog Out (+ Volts) Analog Out (+ Current)		Common if internal 10V supply (terminal 10) is used.	
24	Digital Out 2 – N.O.(1)	Run	See description at No.s 11-13.	380 - 387
25	Digital Out 2 Common			
26	Digital Out 2 – N.C.(1)	NOT Run		

(1) Contacts shown in unpowered state. Any relay programmed as Fault or Alarm will energize (pick up) when power is applied to drive and deenergize (drop out) when fault or alarm exists. Relays selected for other functions will energize only when that condition exists and will deenergize when condition is removed.

(2) These inputs/outputs are dependent on a number of parameters. See “Related Parameters.”

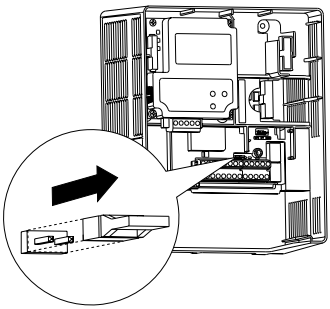
(3) Differential Isolation - External source must be less than 10V with respect to PE.

(4) Differential Isolation - External source must be maintained at less than 160V with respect to PE. Input provides high common mode immunity.

(5) Analog output current is only available with Enhanced Control drives.

Hardware Enable Circuitry (Enhanced Control Only)

By default, the user can program a digital input as an Enable input. The status of this input is *interpreted by drive software*. If the application requires the drive to be disabled *without* software interpretation, a hardware enable configuration can be utilized. This is done by removing the enable jumper (ENBL JMP) and wiring the enable input to "Digital In 6" (see below).



1.Remove drive cover as described on pages 1-1 and 1-2.

2.Locate and remove the Enable Jumper on the Main Control Board (see diagram).

3.Wire Enable to "Digital In 6" (see Table 1.H).

4.Verify that 366 [Digital In6 Sel] is set to option 1 "Enable".

Safe Off Board (Enhanced Control Only)

The PowerFlex Safe-Off board, when used with suitable safety components, provides protection according to EN 954-1:1997; Category 3 for safe off and protection against restart. The PowerFlex safe off option is just one safety control system. All components in the system must be chosen and applied correctly, to achieve the desired level of operator safeguarding.

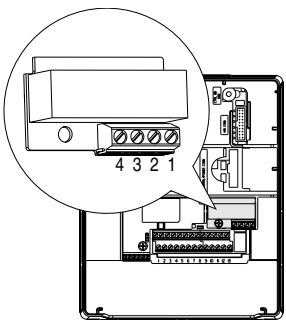


Table 1.I Terminal Description

No.	Signal	Description
1	Monitor - N.C.	Normally closed contacts for monitoring relay status. Maximum Resistive Load: 250V AC / 30V DC / 50 VA / 60 Watts Maximum Inductive Load: 250V AC / 30V DC / 25 VA / 30 Watts
2	Common - N.C.	
3	+24V DC	Connections for user supplied power to energize coil.
4	24V Common	

For detailed information on installing and wiring a safety relay system, refer to the *DriveGuard® Safe-Off Option for PowerFlex AC Drives User Manual*, publication PFLEX-UM001….

Important: If the Safe-Off board is removed from the drive, pins 3 and 4 of the Safe-Off Connector must be jumpered for the drive to run. If the Safe-Off board or the jumper is not installed, and the drive is commanded to run, an F111 "Enable Hardware" fault will occur.

Encoder Interface (Enhanced Control Only)

The PowerFlex Encoder Interface can source 5 or 12 volt power and accept 5 or 12 volt single ended differential inputs.

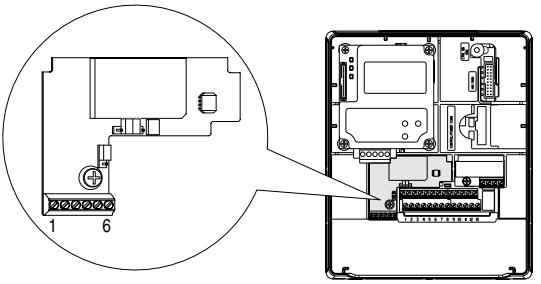

Table 1.J Terminal Description

No.	Signal	Description
1	5-12V Power	Internal power source 250 mA (isolated).
2	Power Return	
3	Encoder B (NOT)	Single channel or quadrature B input.
4	Encoder B	
5	Encoder A (NOT)	Single channel or quadrature A input.
6	Encoder A

Speed Reference Control

"Auto" Speed Sources

The drive speed command can be obtained from a number of different sources. The source is determined by drive programming and the condition of the Speed Select digital inputs, Auto/Manual digital inputs or reference select bits of a command word.

The default source for a command reference (all speed select inputs open or not programmed) is the selection programmed in [Speed Ref A Sel]. If any of the speed select inputs are closed, the drive will use other parameters as the speed command source.

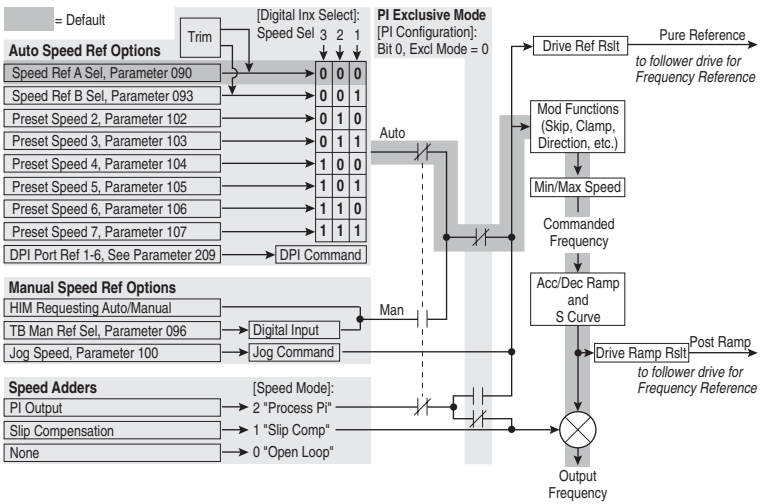
"Manual" Speed Sources

The manual source for speed command to the drive is either the HIM requesting manual control (see ALT Functions on page B-2) or the control terminal block (analog input) if a digital input is programmed to "Auto/Manual".

Changing Speed Sources

The selection of the active Speed Reference can be made through digital inputs, DPI command, jog button or Auto/Manual HIM operation.

Figure 1.13 Speed Reference Selection Chart (1)



(1) To access Preset Speed 1, set [Speed Ref A Sel] or [Speed Ref B Sel] to "Preset Speed 1".

Auto/Manual Examples

PLC = Auto, HIM = Manual

A process is run by a PLC when in Auto mode and requires manual control from the HIM during set-up. The Auto speed reference is issued by the PLC through a communications module installed in the drive. Since the internal communications is designated as Port 5, [Speed Ref A Sel] is set to “DPI Port 5” with the drive running from the Auto source.

Attain Manual Control

- Press ALT then Auto/Man on the HIM.
  When the HIM attains manual control, the drive speed command comes from the HIM speed control keys or analog potentiometer.

Release to Auto Control

- Press ALT then Auto/Man on the HIM again.
  When the HIM releases manual control, the drive speed command returns to the PLC.

PLC = Auto, Terminal Block = Manual

A process is run by a PLC when in Auto mode and requires manual control from an analog potentiometer wired to the drive terminal block. The auto speed reference is issued by the PLC through a communications module installed in the drive. Since the internal communications is designated as Port 5, [Speed Ref A Sel] is set to “DPI Port 5” with the drive running from the Auto source. Since the Manual speed reference is issued by an analog input (“Analog In 1 or 2”), [TB Man Ref Sel] is set to the same input. To switch between Auto and Manual, [Digital In4 Sel] is set to “Auto/ Manual”.

Attain Manual Control

- Close the digital input.
  With the input closed, the speed command comes from the potentiometer.

Release to Auto Control

- Open the digital input.
  With the input open, the speed command returns to the PLC.

Auto/Manual Notes

1. Manual control is exclusive. If a HIM or Terminal Block takes manual control, no other device can take manual control until the controlling device releases manual control.
2. If a HIM has manual control and power is removed from the drive, the drive will return to Auto mode when power is reapplied.

EMC Instructions

CE Conformity[1]

Conformity with the Low Voltage (LV) Directive and Electromagnetic Compatibility (EMC) Directive has been demonstrated using harmonized European Norm (EN) standards published in the Official Journal of the European Communities. PowerFlex Drives comply with the EN standards listed below when installed according to the instructions in this manual and the *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*, publication DRIVES-IN001.

CE Declarations of Conformity are available online at: **http://www.ab.com/certification/ce/docs**.

Low Voltage Directive (73/23/EEC)

- EN50178 Electronic equipment for use in power installations

EMC Directive (89/336/EEC)

- EN61800-3 Adjustable speed electrical power drive systems Part 3: EMC product standard including specific test methods.

General Notes

- If the adhesive label is removed from the top of the drive, the drive must be installed in an enclosure with side openings less than 12.5 mm (0.5 in.) and top openings less than 1.0 mm (0.04 in.) to maintain compliance with the LV Directive.
- The motor cable should be kept as short as possible in order to avoid electromagnetic emission as well as capacitive currents.
- Use of line filters in ungrounded systems is not recommended.
- PowerFlex drives may cause radio interference if used in a residential or domestic environment. The installer is required to take measures to prevent interference, in addition to the essential requirements for CE compliance provided in this section, if necessary.
- Conformity of the drive with CE EMC requirements does not guarantee an entire machine or installation complies with CE EMC requirements. Many factors can influence total machine/installation compliance.
- PowerFlex drives generate conducted low frequency disturbances (harmonic emissions) on the AC supply system.

[1] CE Certification testing has not been completed for 600 Volt class drives.

General Notes (continued)

- When operated on a public supply system, it is the responsibility of the installer or user to ensure, by consultation with the distribution network operator and Rockwell Automation if necessary, that applicable requirements have been met.

Essential Requirements for CE Compliance

Conditions 1-6 listed below **must be** satisfied for PowerFlex drives to meet the requirements of **EN61800-3**.

1. Standard PowerFlex 70 CE compatible Drive.
2. Review important precautions/attention statements throughout this manual before installing the drive.
3. Grounding as described on page 1-5.
4. Output power, control (I/O) and signal wiring must be braided, shielded cable with a coverage of 75% or better, metal conduit, or equivalent attenuation.
5. All shielded cables should terminate with the proper shielded connector.
6. Conditions in Table 1.K or 1.L.

Table 1.K PowerFlex 70 EN61800-3 EMC Compatibility

	0	FN3258-16-45	–	150	–	–	–
	1	FN3258-30-47	–	150	–	–	–
	2	FN3258-42-47	50	50	–	–	–
	2 w/o DC CM Capacitor	FN3258-42-47	150	150	–	–	–
	3	FN3258-75-52	100	100	–	–	–
	3 w/o DC CM Capacitor	FN3258-75-52	150	150	–	–	–

(1) Use of these filters assumes that the drive is mounted in an EMC enclosure.

Start Up

This chapter describes how you start up the PowerFlex 70 Drive. Refer to Appendix B for a brief description of the LED and LCD HIM (Human Interface Module).

For information on...	See page
Prepare For Drive Start-Up	2-1
Status Indicators	2-2
Start-Up Routines	2-3

For information on...	See page
Running S.M.A.R.T. Start	2-4
Running an Assisted Start Up	2-4

ATTENTION: Power must be applied to the drive to perform the following start-up procedure. Some of the voltages present are at incoming line potential. To avoid electric shock hazard or damage to equipment, only qualified service personnel should perform the following procedure. Thoroughly read and understand the procedure before beginning. If an event does not occur while performing this procedure, **Do Not Proceed**. **Remove Power** including user supplied control voltages. User supplied voltages may exist even when main AC power is not applied to the drive. Correct the malfunction before continuing.

Prepare For Drive Start-Up

Before Applying Power to the Drive

❑ **1.** Confirm that all inputs are connected to the correct terminals and are secure.

❑ **2.** Verify that AC line power at the disconnect device is within the rated value of the drive.

❑ **3.** Verify that control power voltage is correct.

The remainder of this procedure requires that a HIM be installed. If an operator interface is not available, remote devices should be used to start up the drive.

Important: When power is first applied, the HIM may require approximately 5 seconds until commands are recognized (including the Stop key).

Applying Power to the Drive

❑ **4.** Apply AC power and control voltages to the drive.

If any of the six digital inputs are configured to "Stop – CF" (CF = Clear Fault) or "Enable," verify that signals are present or the drive will not start. Refer to Alarm Descriptions on page 4-7 for a list of potential digital input conflicts.

If a fault code appears, refer to Chapter 4.

If the STS LED is not flashing green at this point, refer to Status Indicators and their indications below.

❑ **5.** Proceed to Start-Up Routines.

Status Indicators

Figure 2.1 Drive Status Indicators (Typical)

#	Name	Color	State	Description
❶	STS (Status)	Green	Flashing	Drive ready, but not running and no faults are present.
			Steady	Drive running, no faults are present.
		Yellow See page 4-7	Flashing, Drive Stopped	An inhibit condition exists, the drive cannot be started. Check parameter 214 [Start Inhibits].
			Flashing, Drive Running	An intermittent type 1 alarm condition is occurring. Check parameter 211 [Drive Alarm 1].
			Steady, Drive Running	A continuous type 1 alarm condition exists. Check parameter 211 [Drive Alarm 1].
		Red See page 4-3	Flashing	A fault has occurred.
			Steady	A non-resetable fault has occurred.
❷	PORT	Refer to the Communication Adapter User Manual.		Status of DPI port internal communications (if present).
	MOD			Status of communications module (when installed).
	NET A			Status of network (if connected).
	NET B			Status of secondary network (if connected).

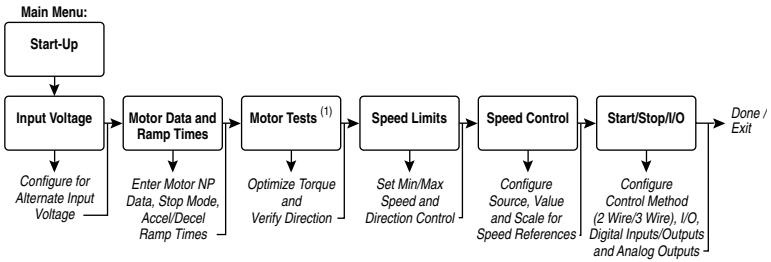
Start-Up Routines

The PowerFlex 70 is designed so that start up is simple and efficient. If you have an LCD HIM, two start-up methods are provided, allowing the user to select the desired level needed for the application.

- **S.M.A.R.T. Start**
  This routine allows you to quickly set up the drive by programming values for the most commonly used functions (see below).

- **Assisted Start Up**
  This routine prompts you for information that is needed to start up a drive for most applications, such as line and motor data, commonly adjusted parameters and I/O. With Enhanced Control, two levels of Assisted Start Up are provided; Basic and Detailed.

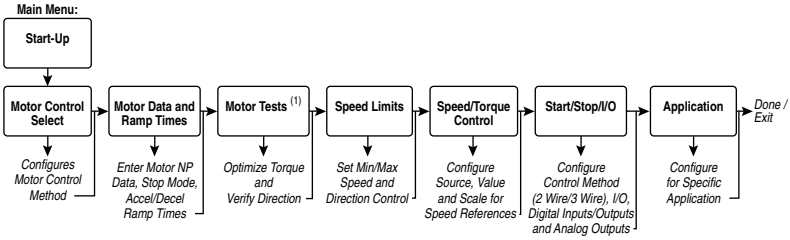
Figure 2.2 Standard Control Start Up Menu



If you do not have an LCD HIM, you must set parameters individually using the LED HIM or other configuration tools, Refer to Chapter 3 for parameters.

Important: Power must be applied to the drive when viewing or changing parameters. Previous programming may affect the drive status when power is applied.

Figure 2.3 Enhanced Control Start Up Menu



(1) During "Motor Tests" the drive may modify some parameter values. It may be necessary to review previously set values.

Running S.M.A.R.T. Start

During a Start Up, the majority of applications require changes to only a few parameters. The LCD HIM on a PowerFlex 70 drive offers S.M.A.R.T. start, which displays the most commonly changed parameters. With these parameters, you can set the following functions:

S - Start Mode and Stop Mode
M - Minimum and Maximum Speed
A - Accel Time 1 and Decel Time 1
R - Reference Source
T - Thermal Motor Overload

To run a S.M.A.R.T. start routine:

Step	Key(s)	Example LCD Displays
1. Press ALT and then Esc (S.M.A.R.T). The S.M.A.R.T. start screen appears. 2. View and change parameter values as desired. For HIM information, see Appendix B. 3. Press Esc to exit the S.M.A.R.T. start.	ALT Esc Esc	F-> Stopped Auto SMART List: Digital In2 Sel Stop Mode A Minimum Speed

Running an Assisted Start Up

Important: This start-up routine requires an LCD HIM.

The Assisted start-up routine asks simple yes or no questions and prompts you to input required information. Access Assisted Start Up by selecting “Start Up” from the Main Menu.

To perform an Assisted Start-Up

Step	Key(s)	Example LCD Displays
1. In the Main Menu, press the Up Arrow or Down Arrow to scroll to “Start Up”. 2. Press Enter.	▲ ▼ ↵	F-> Stopped Auto 0.0 Hz Main Menu: Memory Storage Start Up Preferences

Programming and Parameters

Chapter 3 provides a complete listing and description of the PowerFlex 70 parameters. The parameters can be programmed (viewed/edited) using an LED or LCD HIM (Human Interface Module). As an alternative, programming can also be performed using DriveExplorer™ or DriveExecutive™ software and a personal computer. Refer to Appendix B for brief descriptions of the LED and LCD Human Interface Modules.

Inputs & Outputs File (File J)	3-52
Applications File (File K)	3-59
Parameter Cross Reference – by Name	3-60

About Parameters

To configure a drive to operate in a specific way, drive parameters may have to be set. Three types of parameters exist:

- **ENUM Parameters**
  ENUM parameters allow a selection from 2 or more items. The LCD HIM will display a text message for each item. The LED HIM will display a number for each item.
- **Bit Parameters**
  Bit parameters have individual bits associated with features or conditions. If the bit is 0, the feature is off or the condition is false. If the bit is 1, the feature is on or the condition is true.
- **Numeric Parameters**
  These parameters have a single numerical value (i.e. 0.1 Volts).

The example on the following page shows how each parameter type is presented in this manual.

❶ File	❷ Group	❸ No.	❹ Parameter Name & Description	❺ Values	❻ Related
UTILITY (File E)	Drive . . .	198	**[Load Frm Usr Set]** Loads a previously saved set of parameter values from a selected user set location in drive nonvolatile memory to active drive memory.	Default: 0 "Ready" Options: 0 "Ready" 1 "User Set 1" 2 "User Set 2" 3 "User Set 3"	199
	Diagnostics	216	**[Dig In Status]** Status of the digital inputs.  (1) *Enhanced firmware 2.001 & later.*	
MOTOR . . .	Torq . . .	059	E C **[SV Boost Filter]** Sets the amount of filtering used to boost voltage during Sensorless Vector operation.	Default: 500 Min/Max: 0/32767 Units: 1	

No.	Description
❶	**File** – Lists the major parameter file category.
❷	**Group** – Lists the parameter group within a file.
❸	**No.** – Parameter number. = Parameter value can not be changed until drive is stopped. 32 = 32 bit parameter. E C 32 = 32 bit parameter in Enhanced Control drives only. FV = Parameter only displayed when [Motor Cntl Sel] is set to "4."
❹	**Parameter Name & Description** – Parameter name as it appears on an LCD HIM, with a brief description of the parameters function. Standard = This parameter is specific to Standard Control drives. E C = This parameter will only be available with Enhanced Control drives.
❺	**Values** – Defines the various operating characteristics of the parameter. Three types exist.

ENUM	Default:	Lists the value assigned at the factory. "Read Only" = no default.
	Options:	Displays the programming selections available.
Bit	Bit #:	Lists the bit place holder and definition for each bit.
Numeric	Default:	Lists the value assigned at the factory. "Read Only" = no default.
	Min/Max: Units:	The range (lowest and highest setting) possible for the parameter. Unit of measure and resolution as shown on the LCD HIM.
	Important: Some parameters will have two unit values: • Analog inputs can be set for current or voltage with 320 [Anlg In Config]. • Values that pertain to Enhanced Control drives only will be indicated by "E C."	
	Important: When sending values through DPI ports, simply remove the decimal point to arrive at the correct value (i.e. to send "5.00 Hz," use "500").	

❻	**Related** – Lists parameters (if any) that interact with the selected parameter. The symbol "i" indicates that additional parameter information is available in Appendix C.

How Parameters are Organized

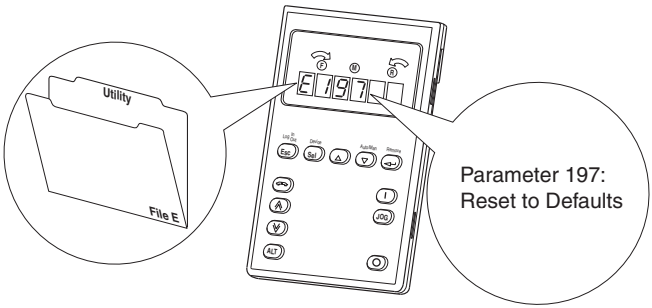
LED HIM (Human Interface Module)

The LED HIM displays parameters in **Numbered List** order. Parameters are accessed by first selecting the file letter then a parameter number.

Important: The PowerFlex 70 Enhanced Control drive does not support the LED HIM.

File Letter Designations

The LED HIM identifies each parameter by File Letter and Parameter Number.



LCD HIM (Human Interface Module)

The LCD HIM displays parameters in a **File-Group-Parameter** or **Numbered List** view order. To switch display mode, access the Main Menu, press ALT then Sel while cursor is on the parameter selection. In addition, using 196 [Param Access Lvl], the user has the option to display *all* parameters, commonly used parameters or diagnostic parameters.

Control Options

Two different control options are available for the PowerFlex 70; Standard and Enhanced. Standard Control drives provide Volts per Hertz and Sensorless Vector operation. Enhanced Control drives support the addition of FVC Vector Control, DriveGuard Safe Off option and more.

File-Group-Parameter View

This simplifies programming by grouping parameters that are used for similar functions. The parameters are organized into 6 files in Basic Parameter view or 7 files in Advanced Parameter view. Each file is divided into groups, and each parameter is an element in a group. By default, the LCD HIM displays parameters by File-Group-Parameter view.

Numbered List View

All parameters are in numerical order.

Basic Parameter View – Standard Control

Parameter 196 [Param Access Lvl] set to option 0 "Basic."

File	Group	Parameters

Monitor File (File A)

File A	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MONITOR (File A)	Metering	001	**[Output Freq]** Output frequency present at T1, T2 & T3 (U, V & W)	Default: Read Only Min/Max: –/+[Maximum Freq] Units: 0.1 Hz	
		002	**[Commanded Freq]** Value of the active frequency command.	Default: Read Only Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	
		003	**[Output Current]** EC 32 The total output current present at T1, T2 & T3 (U, V & W).	Default: Read Only Min/Max: 0.0/Drive Rated Amps × 2 Units: 0.1 Amps 0.01 Amps EC	
		004	**[Torque Current]** EC 32 The amount of current that is in phase with the fundamental voltage component.	Default: Read Only Min/Max: Drive Rating × –2/+2 Units: 0.1 Amps 0.01 Amps EC	
		005	**[Flux Current]** EC 32 The amount of current that is out of phase with the fundamental voltage component.	Default: Read Only Min/Max: Drive Rating × –2/+2 Units: 0.1 Amps 0.01 Amps EC	
		006	**[Output Voltage]** Output voltage present at terminals T1, T2 & T3 (U, V & W).	Default: Read Only Min/Max: 0.0/Drive Rated Volts Units: 0.1 VAC	
		007	**[Output Power]** EC 32 Output power present at T1, T2 & T3 (U, V & W).	Default: Read Only Min/Max: 0.0/Drive Rated kW × 2 Units: 0.1 kW 0.01 kW EC	
		008	**[Output Powr Fctr]** Output power factor.	Default: Read Only Min/Max: 0.00/1.00 Units: 0.01	
		009	**[Elapsed MWh]** 32 Accumulated output energy of the drive.	Default: Read Only Min/Max: 0.0/429496729.5 MWh Units: 0.1 MWh	
		010	**[Elapsed Run Time]** 32 Accumulated time drive is outputting power.	Default: Read Only Min/Max: 0.0/429496729.5 Hrs Units: 0.1 Hrs	
		011	**[MOP Frequency]** Value of the signal at MOP (Motor Operated Potentiometer).	Default: Read Only Min/Max: –/+[Maximum Frequency] Units: 0.1 Hz	
		012	**[DC Bus Voltage]** Present DC bus voltage level.	Default: Read Only Min/Max: 0.0/Drive Rating Based Units: 0.1 VDC	
		013	**[DC Bus Memory]** 6 minute average of DC bus voltage level.	Default: Read Only Min/Max: 0.0/Drive Rating Based Units: 0.1 VDC	

File A	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MONITOR (File A)	Metering	014 32	E C **[Elapsed kWh]** Accumulated output energy of the drive.	Default: Read Only Min/Max: 0.0/429496729.5 kWh Units: 0.1 kWh	
		015	E C v3 **[Torque Estimate]** Estimated motor torque output as percent of motor rated torque.	Default: Read Only Min/Max: –/+800.0 % Units: 0.1 %	
		016 017	**[Analog In1 Value]** **[Analog In2 Value]** Value of the signal at the analog inputs.	Default: Read Only Min/Max: 0.000/20.000 mA –/+10.000V Units: 0.001 mA 0.001 Volt	
		022	E C **[Ramped Speed]** The value shown is the value after the accel/decel ramp but prior to any corrections supplied by slip comp, PI, etc.	Default: Read Only Min/Max: –/+500.0 Hz Units: 0.1 Hz	
		023	E C **[Speed Reference]** Summed value of ramped speed and Process PI.	Default: Read Only Min/Max: –/+500.0 Hz Units: 0.1 Hz	
		024 FV	E C v2 **[Commanded Torque]** Final torque reference value after limits & filtering are applied. % motor rated torque.	Default: Read Only Min/Max: –/+800.0% Units: 0.1%	053
		025	E C v2 **[Speed Feedback]** Value of actual motor speed, measured by encoder feedback or estimated.	Default: Read Only Min/Max: –/+500.0 Hz Units: 0.1 Hz	053
	Drive Data	026 32	**[Rated kW]** Drive power rating.	Default: Read Only Min/Max: 0.37/15.0 kW 0.00/300.00 kW E C Units: 0.01 kW	
		027	**[Rated Volts]** The drive input voltage class (208, 240, 400 etc.).	Default: Read Only Min/Max: 208/600 Volt 0.0/6553.5 Volt E C Units: 0.1 VAC	
		028	**[Rated Amps]** The drive rated output current.	Default: Read Only Min/Max: 1.1/32.2 Amps 0.0/6553.5 Amps E C Units: 0.1 Amps	
		029	**[Control SW Ver]** Main Control Board software version.	Default: Read Only Min/Max: 0.000/65.256 0.0/65.535 E C Units: 0.001	196

Motor Control File (File B)

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Motor Data	040	**[Motor Type]** Set to match the type of motor connected.	Default: 0 "Induction" Options: 0 "Induction" 1 "Synchr Reluc" 2 "Synchr PM"	
		041	**[Motor NP Volts]** Set to the motor nameplate rated volts.	Default: Drive Rating Based Min/Max: 0.0/[Rated Volts] Units: 0.1 VAC	
		042	**[Motor NP FLA]** Set to the motor nameplate rated full load amps.	Default: Drive Rating Based Min/Max: 0.0/[Rated Amps] × 2 Units: 0.1 Amps	047 048
		043	**[Motor NP Hertz]** Set to the motor nameplate rated frequency.	Default: Drive Rating Based Min/Max: 5.0/400.0 Hz 5.0/500.0 Hz EC Units: 0.1 Hz	
		044	**[Motor NP RPM]** Set to the motor nameplate rated RPM.	Default: Drive Rating Based Min/Max: 60/30000 RPM Units: 1 RPM	
		045	**[Motor NP Power]** Set to the motor nameplate rated power. 32 (1) See [Mtr NP Pwr Units]	Default: Drive Rating Based Min/Max: 0.00/100.00 0.00/412.48 EC Units: 0.01 kW/HP(1)	046
		046	**[Mtr NP Pwr Units]** Selects the motor power units to be used.	Default: Drive Rating Based Options: 0 "Horsepower" 1 "kiloWatts"	
		047	**[Motor OL Hertz]** Selects the output frequency below which the motor operating current is derated. The motor thermal overload will generate a fault at lower levels of current.	Default: Motor NP Hz/3 Min/Max: 0.0/500.0 Hz Units: 0.1 Hz	042 220
		048	**[Motor OL Factor]** Sets operating level for motor overload. Motor FLA x OL Factor = Operating Level	Default: 1.00 Min/Max: 0.20/2.00 Units: 0.01	042 220
		049	EC **[Motor Poles]** Defines the number of poles in the motor.	Default: 4 Min/Max: 2/40 Units: 2 Pole	

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Motor Data	050	E C v3 **[Motor OL Mode]** If "0," [Drive OL Count], P219 is reset to zero by a drive reset or a power cycle. If "1," the value is maintained. A "1" to "0" transition resets [Drive OL Count] to zero.  *Factory Default Bit Values*		219
	Torq Attributes	053	Standard **[Torque Perf Mode]** Sets the method of motor torque production.	Default: 0 "Sensrls Vect" Options: 0 "Sensrls Vect" 1 "SV Economize" 2 "Custom V/Hz" 3 "Fan/Pmp V/Hz"	062 063 069 070
			E C **[Motor Cntl Sel]** Sets the method of motor control used in the drive. **Important:** "FVC Vector" mode requires autotuning of the motor, both coupled and uncoupled to the load. (1) Enhanced firmware 2.001 & later.	Default: 0 "Sensrls Vect" Options: 0 "Sensrls Vect" 1 "SV Economize" 2 "Custom V/Hz" 3 "Fan/Pmp V/Hz" 4 "FVC Vector"(1)	
		054	**[Maximum Voltage]** Sets the highest voltage the drive will output.	Default: Drive Rated Volts Min/Max: Rated Volts × 0.25/Rated Volts Units: 0.1 VAC	
		055	**[Maximum Freq]** Sets the highest frequency the drive will output. Refer to parameter 083 [Overspeed Limit].	Default: 110.0 or 130.0 Hz Min/Max: 5.0/400.0 Hz 5.0/500.0 Hz E C Units: 0.1 Hz	083

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Torq Attributes	056	**[Compensation]** Enables/disables correction options.  *Factory Default Bit Values* (1) *Enhanced firmware 1.001 & later.* (2) *Enhanced firmware 2.001 & later.* Option Descriptions Reflect Wave — Disables reflected wave overvoltage protection for long cable lengths. (typically enabled). Enable Jerk — In non-FVC Vector modes, disabling jerk removes a short S-curve at the start of the accel/decel ramp. Ixo AutoCalc — Not functional – reserved for future enhancements. Xsistor Diag — Disables power transistor power diagnostic tests which run at each start command. Rs Adapt — FVC w/Encoder Only - Disabling may improve torque regulation at lower speeds (typically not needed). Mtr Lead Rev — Reverses the phase rotation of the applied voltage, effectively reversing the motor leads. PWM Freq Lock — Keeps the PWM frequency from decreasing to 2 kHz at low operating frequencies in FVC Vector mode without encoder.		411
		057	**[Flux Up Mode]** Auto = Flux is established for a calculated time period based on motor nameplate data. [Flux Up Time] is not used. Manual = Flux is established for [Flux Up Time] before acceleration.	Default: 0 "Manual" Options: 0 "Manual" 1 "Automatic"	053 058
		058	**[Flux Up Time]** Sets the amount of time the drive will use to try and achieve full motor stator flux. When a Start command is issued, DC current at current limit level is used to build stator flux before accelerating.	Default: 0.00 Secs Min/Max: 0.00/5.00 Secs Units: 0.01 Secs	053 058
		059	E C **[SV Boost Filter]** Sets the amount of filtering used to boost voltage during Sensorless Vector operation.	Default: 500 Min/Max: 0/32767 Units: 1	

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Torq Attributes	061	**[Autotune]** Provides a manual or automatic method for setting [IR Voltage Drop] and [Flux Current Ref], which affect sensorless vector performance. Valid only when parameter 53 is set to "Sensrls Vect," "SV Economize" or "FVC Vector"	Default: 3 "Calculate" Options: 0 "Ready" 1 "Static Tune" 2 "Rotate Tune" 3 "Calculate"	053 062
			"Ready" (0) = Parameter returns to this setting following a "Static Tune" or "Rotate Tune." It also permits manually setting [IR Voltage Drop] and [Flux Current Ref]. "Static Tune" (1) = A temporary command that initiates a non-rotational motor stator resistance test for the best possible automatic setting of [IR Voltage Drop]. A start command is required following initiation of this setting. The parameter returns to "Ready" (0) following the test, at which time another start transition is required to operate the drive in normal mode. Used when motor cannot be rotated. "Rotate Tune" (2) = A temporary command that initiates a "Static Tune" followed by a rotational test for the best possible automatic setting of [Flux Current Ref]. A start command is required following initiation of this setting. The parameter returns to "Ready" (0) following the test, at which time another start transition is required to operate the drive in normal mode. **Important:** Used when motor is uncoupled from the load. Results may not be valid if a load is coupled to the motor during this procedure. **ATTENTION:** Rotation of the motor in an undesired direction can occur during this procedure. To guard against possible injury and/or equipment damage, it is recommended that the motor be disconnected from the load before proceeding. "Calculate" (3) = This setting uses motor nameplate data to automatically set [IR Voltage Drop] and [Flux Current Ref].		
		062	**[IR Voltage Drop]** Value of voltage drop across the resistance of the motor stator at rated motor current. Used only parameter 53 is set to "Sensrls Vect", "SV Economize" or "FVC Vector."	Default: Drive Rating Based Min/Max: 0.0/[Motor NP Volts]×0.5 Units: 0.1 VAC	053 061
		063	**[Flux Current Ref]** Value of amps for full motor flux. Used only when parameter 53 is set to "Sensrls Vect", "SV Economize" or "FVC Vector."	Default: Drive Rating Based Min/Max: [Motor NP FLA] × 0.05/ [Motor NP FLA] × 0.9 Units: 0.01 Amps	053 061
		064	E C v2 **[IXo Voltage Drop]** Value of voltage drop across the leakage inductance of the motor at rated motor current. Used only when parameter 53 is set to "FVC Vector."	Default: Based on Drive Rating Min/Max: 0.0/Motor NP Volts Units: 0.1 VAC	
		066	E C v2 **[Autotune Torque]** Specifies motor torque applied to the motor during the flux current and inertia tests performed during an autotune.	Default: 50.0% Min/Max: 0.0/150.0% Units: 0.1%	053

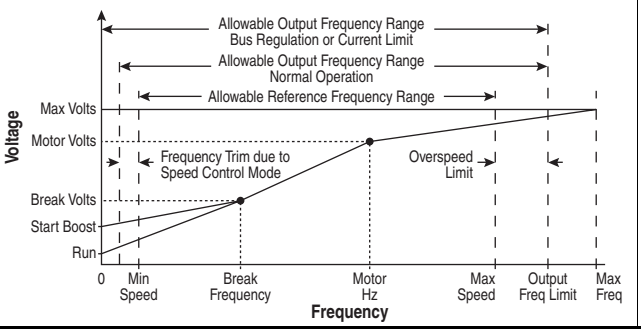
File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Torq Attributes	067	E C v2 **[Inertia Autotune]** Provides an automatic method of setting [Total Inertia]. This test is automatically run during Start-Up motor tests. **Important:** Use when motor is coupled to the load. Results may not be valid if the load is not coupled to the motor during this procedure. "Ready" = Parameter returns to this setting following a completed inertia tune. "Inertia Tune" = A temporary command that initiates an inertia test of the motor/load combination. The motor will ramp up and down, while the drive measures the amount of inertia.	Default: 0 "Ready" Options: 0 "Ready" 1 "Inertia Tune"	053 450
		427	E C v2 **[Torque Ref A Sel]** Selects the source of the external torque reference to the drive. How this reference is used is dependent upon [Speed/Torque Mod]. (1) See *Appendix B* for DPI port locations.	Default: 0 "Torque Setpt" Options: 0 "Torque Setpt" 1 "Analog In 1" 2 "Analog In 2" 3-17 "Reserved" 18-22 "DPI Port 1-5"(1) 23 "Reserved" 24 "Disabled"	053
		428	E C v2 **[Torque Ref A Hi]** Scales the upper value of the [Torque Ref A Sel] selection when the source is an analog input.	Default: 100.0% Min/Max: –/+800.0% Units: 0.1%	053
		429	E C v2 **[Torque Ref A Lo]** Scales the lower value of the [Torque Ref A Sel] selection when the source is an analog input.	Default: 0.0% Min/Max: –/+800.0% Units: 0.1%	053
		435	E C v2 **[Torque Setpoint1]** Provides an internal fixed value for Torque Setpoint when [Torque Ref Sel] is set to "Torque Setpt."	Default: 0.0% Min/Max: –/+800.0% Units: 0.1%	053
		436	E C v2 **[Pos Torque Limit]** Defines the torque limit for the positive torque reference value. The reference will not be allowed to exceed this value.	Default: 200.0% Min/Max: 0.0/800.0% Units: 0.1%	053
		437	E C v2 **[Neg Torque Limit]** Defines the torque limit for the negative torque reference value. The reference will not be allowed to exceed this value.	Default: –200.0% Min/Max: –800.0/0.0% Units: 0.1%	053

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Torq Attributes	440	E C v2 **[Control Status]** FV Displays a summary status of any condition that may be limiting either the current or the torque reference.  	Read Only	053
		441	E C v2 **[Torq Current Ref]** FV Displays the torque current reference value that is present at the output of the current rate limiter (parameter 154).	Default: Read Only Min/Max: –/+3276.7 Amps Units: 0.1 Amps	053
	Volts per Hertz	069	**[Start/Acc Boost]** Sets the voltage boost level for starting and acceleration when “Custom V/Hz” mode is selected. Refer to parameter 083 [Overspeed Limit].	Default: Drive Rating Based Min/Max: 0.0/[Motor NP Volts] × 0.25 Units: 0.1 VAC	053 070
		070	**[Run Boost]** Sets the boost level for steady state or deceleration when “Fan/Pmp V/Hz” or “Custom V/Hz” modes are selected. Refer to the diagram at parameter 083.	Default: Drive Rating Based Min/Max: 0.0/[Motor NP Volts] × 0.25 Units: 0.1 VAC	053 069
		071	**[Break Voltage]** Sets the voltage the drive will output at [Break Frequency]. Refer to parameter 083 [Overspeed Limit].	Default: [Motor NP Volts] × 0.25 Min/Max: 0.0/[Motor NP Volts] Units: 0.1 VAC	053 072
		072	**[Break Frequency]** Sets the frequency the drive will output at [Break Voltage]. Refer to parameter 083 [Overspeed Limit].	Default: [Motor NP Hertz] × 0.25 Min/Max: 0.0/[Maximum Freq] Units: 0.1 Hz	053 071

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Speed Feedback	412	E C v2 **[Motor Fdbk Type]** Selects the encoder type; single channel or quadrature. Options 1 & 3 detect a loss of encoder signal (when using differential inputs) regardless of the [Feedback Select], param. 080 setting. For FVC Vector mode, use a quadrature encoder only (option 0/1). If a single channel encoder is used (option 2/3) in sensorless vector or V/Hz mode, select "Reverse Dis" (option 2) in param. 190.	Default: 0 "Quadrature" Options: 0 "Quadrature" 1 "Quad Check" 2 "Single Chan" 3 "Single Check"	
		413	E C v2 **[Encoder PPR]** Contains the encoder pulses per revolution. For improved operation in FVC Vector mode, PPR should be ≥ (64 x motor poles).	Default: 1024 PPR Min/Max: 1/20000 PPR Units: 1 PPR	
		414	E C v2 **[Enc Pos Feedback]** Displays raw encoder pulse count. For single channel encoders, this count will increase (per rev.) by the amount in [Encoder PPR]. For quadrature encoders this count will increase by 4 times the amount defined in [Encoder PPR].	Default: Read Only Min/Max: –/+2147483647 Units: 1	
		415	E C v2 **[Encoder Speed]** Provides a monitoring point that reflects speed as seen from the feedback device.	Default: Read Only Min/Max: –/+500.0 Hz Units: 0.1 Hz	
		416	E C v2 **[Fdbk Filter Sel]** Selects the type of feedback filter desired. "Light" uses a 35/49 radian feedback filter. "Heavy" uses a 20/40 radian feedback filter.	Default: 0 "None" Options: 0 "None" 1 "Light" 2 "Heavy"	
		419	E C v2 **[Notch FilterFreq]** FV Sets the center frequency for an optional 2-pole notch filter. Filter is applied to the torque command. "0" disables this filter.	Default: 0.0 Hz Min/Max: 0.0/500.0 Hz Units: 0.1 Hz	053
		420	E C v2 **[Notch Filter K]** FV Sets the width for the 2-pole notch filter.	Default: 0.3 Min/Max: 0.1/0.9 Units: 0.1	053

Speed Command File (File C)

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Spd Mode & Limits	080	Standard **[Speed Mode]** Sets the method of speed regulation.	Default: 0 "Open Loop" Options: 0 "Open Loop" 1 "Slip Comp" 2 "Process PI"	121 thru 138
			EC **[Feedback Select]** Selects the source for motor speed feedback. Note that all selections are available when using Process PI. "Open Loop" (0) - no encoder is present, and slip compensation is not needed. "Slip Comp" (1) - tight speed control is needed, and encoder is not present. "Encoder" (3) - an encoder is present. "Simulator" (5) - Simulates a motor for testing drive operation & interface check.	Default: 0 "Open Loop" Options: 0 "Open Loop" 1 "Slip Comp" 2 "Reserved" 3 "Encoder" 4 "Reserved" 5 "Simulator"	
		081	**[Minimum Speed]** Sets the low limit for speed reference after scaling is applied. Refer to parameter 083 [Overspeed Limit].	Default: 0.0 Hz Min/Max: 0.0/[Maximum Speed] Units: 0.1 Hz	092 095
		082	**[Maximum Speed]** Sets the high limit for speed reference after scaling is applied. Refer to parameter 083 [Overspeed Limit].	Default: 50.0 or 60.0 Hz (Dependent on voltage class) Min/Max: 5.0/400.0 Hz 5.0/500.0 Hz EC Units: 0.1 Hz	055 083 091 094 202
		083	**[Overspeed Limit]** Sets the incremental amount of the output frequency (above [Maximum Speed]) allowable for functions such as slip compensation. [Maximum Speed] + [Overspeed Limit] must be ≤ [Maximum Freq]	Default: 10.0 Hz Min/Max: 0.0/20.0 Hz Units: 0.1 Hz	055 082



File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Spd Mode & Limits	084 085 086	**[Skip Frequency 1]** **[Skip Frequency 2]** **[Skip Frequency 3]** Sets a frequency at which the drive will not operate.	Default: 0.0 Hz Default: 0.0 Hz Default: 0.0 Hz Min/Max: –/+500.0 Hz Units: 0.1 Hz	087
		087	**[Skip Freq Band]** Determines the bandwidth around a skip frequency. [Skip Freq Band] is split, applying 1/2 above and 1/2 below the actual skip frequency. The same bandwidth applies to all skip frequencies.	Default: 0.0 Hz Min/Max: 0.0/30.0 Hz Units: 0.1 Hz	084
		088 FV	E C v2 **[Speed/Torque Mod]** Selects the torque reference source. "Zero Torque" (0) - torque command = 0. "Speed Reg" (1) - drive operates as a speed regulator. "Torque Reg" (2) - an external torque reference is used for the torque command. "Min Torq/Spd" (3) - selects the smallest algebraic value to regulate to when the torque reference and torque generated from the speed regulator are compared. "Max Torq/Spd" (4) - selects the largest algebraic value when the torque reference and the torque generated from the speed regulator are compared. "Sum Torq/Spd" (5) - selects the sum of the torque reference and the torque generated from the speed regulator. **ATTENTION:** The speed of the drive could reach [Maximum Speed] + [Overspeed Limit] to meet required torque when any of the torque modes have been selected. Equipment damage and/or personal injury may result.	Default: 1 "Speed Reg" Options: 0 "Zero Torque" 1 "Speed Reg" 2 "Torque Reg" 3 "Min Torq/Spd" 4 "Max Torq/Spd" 5 "Sum Torq/Spd"	053
		454	E C **[Rev Speed Limit]** Sets a limit on speed in the negative direction. A value of zero disables this parameter and uses [Min Speed] for minimum speed.	Default: 0.0 Hz Min/Max: –[Max Speed]/0.0 Hz Units: 0.1 Hz	

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Speed References	090	**[Speed Ref A Sel]** Selects the source of the speed reference to the drive unless [Speed Ref B Sel] or [Preset Speed 1-7] is selected. For more information on selecting a speed reference source, see Figure 1.13 on page 1-19. (1) See Appendix B for DPI port locations. (2) Enhanced Control Drives Only.	Default: 2 "Analog In 2" Options: 1 "Analog In 1" 2 "Analog In 2" 3-7 "Reserved" 8 "Encoder" 9 "MOP Level" 10 "Reserved" 11 "Preset Spd1" 12 "Preset Spd2" 13 "Preset Spd3" 14 "Preset Spd4" 15 "Preset Spd5" 16 "Preset Spd6" 17 "Preset Spd7" 18 "DPI Port 1"(1) 19 "DPI Port 2"(1) 20 "DPI Port 3"(1) 21 "Reserved" 22 "DPI Port 5"(1) 23-29 "Reserved" 30 "HighRes Ref"(2)	002 091 thru 093 101 thru 107 117 thru 120 192 thru 194 213 272 273 320 361 thru 366
		091	**[Speed Ref A Hi]** Scales the upper value of the [Speed Ref A Sel] selection when the source is an analog input.	Default: [Maximum Speed] Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	082
		092	**[Speed Ref A Lo]** Scales the lower value of the [Speed Ref A Sel] selection when the source is an analog input.	Default: 0.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	081
		093	**[Speed Ref B Sel]** See [Speed Ref A Sel].	Default: 11 "Preset Spd1" Options: See [Speed Ref A Sel]	See 090
		094	**[Speed Ref B Hi]** Scales the upper value of the [Speed Ref B Sel] selection when the source is an analog input.	Default: [Maximum Speed] Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	093
		095	**[Speed Ref B Lo]** Scales the lower value of the [Speed Ref B Sel] selection when the source is an analog input.	Default: 0.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	090 093

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Speed References	096	**[TB Man Ref Sel]** Sets the manual speed reference source when a digital input is configured for "Auto/Manual." (1) "Analog In 2" is not a valid selection if it was selected for any of the following: - [Trim In Select] - [PI Feedback Sel] - [PI Reference Sel] - [Current Lmt Sel]	Default: 1 "Analog In 1" Options: 1 "Analog In 1" 2 "Analog In 2"(1) 3-8 "Reserved" 9 "MOP Level"	097 098
		097	**[TB Man Ref Hi]** Scales the upper value of the [TB Man Ref Sel] selection when the source is an analog input.	Default: [Maximum Speed] Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	096
		098	**[TB Man Ref Lo]** Scales the lower value of the [TB Man Ref Sel] selection when the source is an analog input.	Default: 0.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	096
	Discrete Speeds	100	Standard **[Jog Speed]** Sets the output frequency when a jog command is issued.	Default: 10.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	
			E C **[Jog Speed 1]** Sets the output frequency when Jog Speed 1 is selected.	Default: 10.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	
		101 102 103 104 105 106 107	**[Preset Speed 1]** **[Preset Speed 2]** **[Preset Speed 3]** **[Preset Speed 4]** **[Preset Speed 5]** **[Preset Speed 6]** **[Preset Speed 7]** Provides an internal fixed speed command value. In bipolar mode direction is commanded by the sign of the reference.	Default: 5.0 Hz 10.0 Hz 20.0 Hz 30.0 Hz 40.0 Hz 50.0 Hz 60.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	090 093
		108	E C **[Jog Speed 2]** Sets the output frequency when Jog Speed 2 is selected.	Default: 10.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz	

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Speed Trim	116	EC **[Trim % Setpoint]** Adds or subtracts a percentage of the speed reference or maximum speed. Dependent on the setting of [Trim Out Select], parameter 118.	Default: 0.00% Min/Max: –/+200.00% Units: 0.01%	090 093
		117	**[Trim In Select]** Specifies which analog input signal is being used as a trim input.	Default: 2 "Analog In 2" Options: See [Speed Ref A Sel]	090 093
		118	**[Trim Out Select]** Specifies which speed references are to be trimmed.  *Factory Default Bit Values* * Enhanced Control Option Only.	117 119 120
		119	**[Trim Hi]** Scales the upper value of the [Trim In Select] selection when the source is an analog input.	Default: 60.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz 1 % EC	082 117
		120	**[Trim Lo]** Scales the lower value of the [Trim In Select] selection when the source is an analog input.	Default: 0.0 Hz Min/Max: –/+[Maximum Speed] Units: 0.1 Hz 1 % EC	117
	Slip Comp		**Important:** Parameters in the Slip Comp Group are used to enable and tune the Slip Compensation Regulator. In order to allow the Slip Compensation Regulator to control drive operation, parameter 080 must be set to 1 "Slip Comp".		
		121	**[Slip RPM @ FLA]** Sets the amount of compensation to drive output at motor FLA. If the value of parameter 061 [Autotune] = 3 "Calculate" changes made to this parameter will not be accepted.	Default: Based on [Motor NP RPM] Min/Max: 0.0/1200.0 RPM Units: 0.1 RPM	061 080 122 123
		122	**[Slip Comp Gain]** Sets the response time of slip compensation.	Default: 40.0 Min/Max: 1.0/100.0 Units: 0.1	080 121 122
		123	**[Slip RPM Meter]** Displays the present amount of adjustment being applied as slip compensation.	Default: Read Only Min/Max: 0.0/300.0 RPM –/+300.0 RPM EC Units: 0.1 RPM	080 121 122

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Process PI		**Important:** Parameters in the Process PI Group are used to enable and tune the PI Loop. Standard To allow the PI Loop to control drive operation, parameter 080 must be set to 2 "Process PI".		
		124	**[PI Configuration]** Sets configuration of the PI regulator.  *Factory Default Bit Values* (1) *Enhanced firmware 1.001 & later.* (2) *Enhanced firmware 2.001 & later.*		124 thru 138
		125	**[PI Control]** Controls the PI regulator.  *Factory Default Bit Values*		080
		126	**[PI Reference Sel]** Selects the source of the PI reference. (1) Enhanced Control Drives Only.	Default: 0 "PI Setpoint" Options: 0 "PI Setpoint" 1 "Analog In 1" 2 "Analog In 2" 3-7 "Reserved" 8 "Encoder" 9 "MOP Level" 10 "Master Ref" 11-17 "Preset Spd1-7" 18-20 "DPI Port 1-3" 21 "Reserved" 22 "DPI Port 5" 23-29 "Reserved" 30 "HighRes Ref"(1)	124 thru 138
		127	**[PI Setpoint]** Provides an internal fixed value for process setpoint when [PI Reference Sel] is set to "PI Setpoint."	Default: 50.00% Min/Max: –/+100.00% of Maximum Process Value Units: 0.01%	124 thru 138

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Process PI	128	**[PI Feedback Sel]** Selects the source of the PI feedback.	Default: 2 "Analog In 2" Options: See [PI Reference Sel].	124 thru 138
		129	**[PI Integral Time]** Time required for the integral component to reach 100% of [PI Error Meter]. Not functional when the PI Hold bit of [PI Control] = "1" (enabled). A value of zero disables this parameter	Default: 2.00 Secs Min/Max: 0.00/100.00 Secs Units: 0.01 Secs	124 thru 138
		130	**[PI Prop Gain]** Sets the value for the PI proportional component. PI Error × PI Prop Gain = PI Output	Default: 1.00 Min/Max: 0.00/100.00 Units: 0.01	124 thru 138
		131	**[PI Lower Limit]** Sets the lower limit of the PI output.	Default: –[Maximum Freq] –100% EC Min/Max: –/+400.0 Hz –/+800% EC Units: 0.1 Hz 0.1% EC	124 thru 138
		132	**[PI Upper Limit]** Sets the upper limit of the PI output.	Default: +[Maximum Freq] 100% EC Min/Max: –/+400.0 Hz –/+800.0% EC Units: 0.1 Hz 0.1% EC	124 thru 138
		133	**[PI Preload]** Sets the value used to preload the integral component on start or enable.	Default: 0.0 Hz 100.0% EC Min/Max: [PI Lower Limit]/ [PI Upper Limit Units: 0.1 Hz 0.1% EC	124 thru 138
		134	**[PI Status]** Status of the Process PI regulator.  	Read Only	124 thru 138
		135	**[PI Ref Meter]** Present value of the PI reference signal.	Default: Read Only Min/Max: –/+100.00% Units: 0.01%	124 thru 138

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Process PI	136	**[PI Fdback Meter]** Present value of the PI feedback signal.	Default: Read Only Min/Max: –/+100.00% Units: 0.01%	124 thru 138
		137	**[PI Error Meter]** Present value of the PI error.	Default: Read Only Min/Max: –/+100.00% Units: 0.01%	124 thru 138
		138	**[PI Output Meter]** Present value of the PI output.	Default: Read Only Min/Max: –/+100.0 Hz –/+800.0% EC Units: 0.1 Hz 0.1% EC	124 thru 138
		139	EC v2 **[PI BW Filter]** *Firmware 2.001 & later* – Provides filter for Process PI error signal. The output of this filter is displayed in [PI Error Meter]. Zero will disable the filter.	Default: 0.0 R/s Min/Max: 0.0/240.0 R/s Units: 0.1 R/s	137
		459	EC v2 **[PI Deriv Time]** Refer to formula below: $PI_{Out} = KD\ (Sec) \times \frac{d_{PI\ Error}\ (\%)}{d_t\ (Sec)}$	Default: 0.00 Secs Min/Max: 0.00/100.00 Secs Units: 0.01 Secs	
		460	EC **[PI Reference Hi]** Scales the upper value of [PI Reference Sel] of the source.	Default: 100.0% Min/Max: –/+100.0% Units: 0.1%	
		461	EC **[PI Reference Lo]** Scales the lower value of [PI Reference Sel] of the source.	Default: –100.0% Min/Max: –/+100.0% Units: 0.1%	
		462	EC **[PI Feedback Hi]** Scales the upper value of [PI Feedback] of the source.	Default: 100.0% Min/Max: –/+100.0% Units: 0.1%	
		463	EC **[PI Feedback Lo]** Scales the lower value of [PI Feedback] of the source.	Default: 0.0% Min/Max: –/+100.0% Units: 0.1%	
	Speed Regulator	445	EC v2 **[Ki Speed Loop]** FV Controls the integral error gain of the speed regulator. The drive automatically adjusts [Ki Speed Loop] when a non-zero value is entered for [Speed Desired BW] or an autotune is performed. Typically, manual adjustment of this parameter is needed only if system inertia cannot be determined through an autotune. [Speed Desired BW] is set to "0" when a manual adjustment is made to this parameter.	Default: 7.8 Min/Max: 0.0/4000.0 Units: 0.1	053

File C	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
SPEED COMMAND (File C)	Speed Regulator	446 FV	E C v2 **[Kp Speed Loop]** Controls the proportional error gain of the speed regulator. The drive automatically adjusts [Kp Speed Loop] when a non-zero value is entered for [Speed Desired BW] or an auto-tune is performed. Typically, manual adjustment of this parameter is needed only if system inertia cannot be determined through an autotune. [Speed Desired BW] is set to "0" when a manual adjustment is made to this parameter.	Default: 6.3 Min/Max: 0.0/200.0 Units: 0.1	053
		447 FV	E C v2 **[Kf Speed Loop]** Controls the feed forward gain of the speed regulator. Setting the Kf gain greater than zero reduces speed feedback overshoot in response to a step change in speed reference.	Default: 0.0 Min/Max: 0.0/0.5 Units: 0.1	053
		448 FV	E C v3 **[Spd Err Filt BW]** Sets the bandwidth of a speed error filter used in FVC Vector mode. A setting of 0.0 disables the filter.	Default: 200.0 R/s Min/Max: 0.0/2000.0 R/s Units: 0.1 R/s	053
		449 FV	E C v2 **[Speed Desired BW]** Sets the speed loop bandwidth and determines the dynamic behavior of the speed loop. As bandwidth increases, the speed loop becomes more responsive and can track a faster changing speed reference. Adjusting this parameter will cause the drive to calculate and change [Ki Speed Loop] and [Kp Speed Loop] gains.	Default: 0.0 Radians/Sec Min/Max: 0.0/250.0 Radians/Sec Units: 0.1 Radians/Sec	053
		450 FV	E C v2 **[Total Inertia]** Represents the time in seconds, for a motor coupled to a load to accelerate from zero to base speed, at rated motor torque. The drive calculates Total Inertia during the autotune inertia procedure. Adjusting this parameter will cause the drive to calculate and change [Ki Speed Loop] and [Kp Speed Loop] gains.	Default: 0.10 Secs Min/Max: 0.01/600.0 Secs Units: 0.01 Secs	053
		451 FV	E C v2 **[Speed Loop Meter]** Value of the speed regulator output. When in FVC mode, units are in percent.	Default: Read Only Min/Max: –/+800.0%/Hz Units: 0.1%/Hz	053 121

Dynamic Control File (File D)

File D	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
DYNAMIC CONTROL (File D)	Ramp Rates	140 141	**[Accel Time 1]** **[Accel Time 2]** Sets the rate of accel for all speed increases. $\frac{\text{Max Speed}}{\text{Accel Time}}$ = Accel Rate	Default: 10.0 Secs 10.0 Secs Min/Max: 0.0/3600.0 Secs Units: 0.1 Secs	142 143 146 361 thru 366
		142 143	**[Decel Time 1]** **[Decel Time 2]** Sets the rate of decel for all speed decreases. $\frac{\text{Max Speed}}{\text{Decel Time}}$ = Decel Rate	Default: 10.0 Secs 10.0 Secs Min/Max: 0.0/3600.0 Secs Units: 0.1 Secs	140 141 146 361 thru 366
		146	**[S Curve %]** Sets the percentage of accel or decel time that is applied to the ramp as S Curve. Time is added, 1/2 at the beginning and 1/2 at the end of the ramp.	Default: 0.0% Min/Max: 0.0/100.0% Units: 0.1%	140 thru 143
	Load Limits	147	**[Current Lmt Sel]** Selects the source for the adjustment of current limit (i.e. parameter, analog input, etc.).	Default: 0 "Cur Lim Val" Options: 0 "Cur Lim Val" 1 "Analog In 1" 2 "Analog In 2"	146 149
		148	**[Current Lmt Val]** Defines the current limit value when [Current Lmt Sel] = "Cur Lim Val."	Default: [Rated Amps] × 1.5 (Equation approximates default value.) Min/Max: Drive Rating Based Units: 0.1 Amps	147 149
		149	**[Current Lmt Gain]** Sets the responsiveness of the current limit.	Default: 250 Min/Max: 0/5000 Units: 1	147 148
		150	**[Drive OL Mode]** Selects the drive's response to increasing drive temperature.	Default: 3 "Both–PWM 1st" Options: 0 "Disabled" 1 "Reduce CLim" 2 "Reduce PWM" 3 "Both–PWM 1st"	219
		151	**[PWM Frequency]** Sets the carrier frequency for the PWM output. Drive derating may occur at higher carrier frequencies. For derating information, refer to the *PowerFlex Reference Manual*, publication PFLEX-RM001….	Default: 4 kHz Min/Max: 2, 3, 4, 5, 6, 7, 8, 9, 10 kHz 2, 4, 8, 12 kHz EC Units: 1 kHz	

File D	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
DYNAMIC CONTROL (File D)	Load Limits	152	E C v2 **[Droop RPM @ FLA]** Selects amount of droop that the speed reference is reduced when at full load torque. Zero disables the droop function. Setting parameter 080 to 0 is recommended when using the Droop function.	Default: 0.0 RPM Min/Max: 0.0/200.0 RPM Units: 0.1 RPM	
		153	E C v2 **[Regen Power Lim]** FV Sets the maximum power limit allowed to transfer from the motor to the DC bus. When using an external dynamic brake, set this parameter to its maximum value.	Default: –50.0% Min/Max: –800.0/0.0% Units: 0.1%	053
		154	E C v2 **[Current Rate Lim]** FV Sets the largest allowable rate of change for the current reference signal. This number is scaled in percent of maximum motor current every 250 microseconds.	Default: 400.0% Min/Max: 1.0/800.0% Units: 0.1%	053
		189	E C **[Shear Pin Time]** Sets the time that the drive is at or above current limit before a fault occurs. Zero disables this feature.	Default: 0.0 Secs Min/Max: 0.0/30.0 Secs Units: 0.1 Secs	
	Stop/Brake Modes	145	E C **[DB While Stopped]** Enables/disables dynamic brake operation. Disabled = DB will only operate when drive is running. Enable = DB operates whenever drive is energized.	Default: 0 "Disabled" Options: 0 "Disabled" 1 "Enabled"	
		155 156	Standard **[Stop Mode A]** Standard **[Stop Mode B]** Active stop mode. [Stop Mode A] is active unless [Stop Mode B] is selected by digital inputs programmed for "Stop Mode B." (1) When using options 1 or 2, refer to the Attention statements at [DC Brake Level].	Default: 1 "Ramp" Default: 0 "Coast" Options: 0 "Coast" 1 "Ramp"(1) 2 "Ramp to Hold"(1) 3 "DC Brake"	157 158 159 361 thru 366
			E C v2 **[Stop/Brk Mode A]** E C v2 **[Stop/Brk Mode B]** See description above.	Default: 1 "Ramp" Default: 0 "Coast" Options: 0 "Coast" 1 "Ramp"(1) 2 "Ramp to Hold"(1) 3 "DC Brake" 4 "Fast Brake" E C v3	
		157	**[DC Brake Lvl Sel]** Selects the source for [DC Brake Level].	Default: 0 "DC Brake Lvl" Options: 0 "DC Brake Lvl" 1 "Analog In 1" 2 "Analog In 2"	155 156 158 159

File D	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
DYNAMIC CONTROL (File D)	Stop/Brake Modes	158	**[DC Brake Level]** Defines the DC brake current level injected into the motor when "DC Brake" is selected as a stop mode. The DC braking voltage used in this function is created by a PWM algorithm and may not generate the smooth holding force needed for some applications. Refer to the *PowerFlex Reference Manual*, publication PFLEX-RM001…. **Important:** Frame E drives may be limited to less than 150% depending on the setting of parameter 151 [PWM Frequency].	Default: [Rated Amps] Min/Max: 0/[Rated Amps] × 1.5 (Equation yields approximate maximum value.) Units: 0.1 Amps	
			ATTENTION: If a hazard of injury due to movement of equipment or material exists, an auxiliary mechanical braking device must be used. **ATTENTION:** This feature should not be used with synchronous or permanent magnet motors. Motors may be demagnetized during braking.		
		159	**[DC Brake Time]** Sets the amount of time DC brake current is "injected" into the motor.	Default: 0.0 Secs Min/Max: 0.0/90.0 Secs Units: 0.1 Secs	155 thru 158
		160	Standard **[Bus Reg Gain]** E C **[Bus Reg Ki]** Sets the responsiveness of the bus regulator.	Default: 450 Min/Max: 0/5000 Units: 1	161 162
		161 162	**[Bus Reg Mode A]** **[Bus Reg Mode B]** Active bus regulation mode. Choices are dynamic brake, frequency adjust or both. Sequence is determined by programmed value or digital input programmed for "Bus Reg Md B." Dynamic Brake Setup If a dynamic brake resistor is connected to the drive, both these parameters must be set to either option 2, 3 or 4. Refer to the Attention statement on page P-4 for important information on bus regulation.	Default: 1 "Adjust Freq" 4 "Both-Frq 1st" Options: 0 "Disabled" 1 "Adjust Freq" 2 "Dynamic Brak" 3 "Both-DB 1st" 4 "Both-Frq 1st"	160 163 361 thru 366
			ATTENTION: The drive does not offer protection for externally mounted brake resistors. A risk of fire exists if external braking resistors are not protected. External resistor packages must be self-protected from over temperature or the protective circuit shown in Figure C.1 on page C-1 (or equivalent) must be supplied.		

File D	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
DYNAMIC CONTROL (File D)	Stop/Brake Modes	163	**[DB Resistor Type]** Selects whether the internal or an external DB resistor will be used. If a dynamic brake resistor is connected to the drive, [Bus Reg Mode x], A, B or Both (if used), must be set to either option 2, 3 or 4. **ATTENTION:** The drive does not offer protection for externally mounted brake resistors. A risk of fire exists if external braking resistors are not protected. External resistor packages must be self-protected from over temperature or the protective circuit shown in Figure C.1 on page C-1, or equivalent, must be supplied. **ATTENTION:** Equipment damage may result if a drive mounted (internal) resistor is installed and this parameter is set to "External Res." Thermal protection for the internal resistor will be disabled, resulting in possible device damage.	Default: 0 "Internal Res" 2 "None" E C Options: 0 "Internal Res" 1 "External Res" 2 "None"	161 162
		164	E C **[Bus Reg Kp]** Proportional gain for the bus regulator. Used to adjust regulator response.	Default: 1500 Min/Max: 0/10000 Units: 1	
		165	E C **[Bus Reg Kd]** Derivative gain for the bus regulator. Used to control regulator overshoot.	Default: 1000 Min/Max: 0/10000 Units: 1	
		166	E C v2 **[Flux Braking]** Set to use an increase in the motor flux current to increase the motor losses, and allow a faster deceleration time when a chopper brake or regenerative capability is not available. Can be used as a stopping or fast deceleration method.	Default: 0 "Disabled" Options: 0 "Disabled" 1 "Enabled"	

File D	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
DYNAMIC CONTROL (File D)	Restart Modes	167	E C **[Powerup Delay]** Defines the programmed delay time, in seconds, before a start command is accepted after a power up.	Default: 0.0 Secs Min/Max: 0.0/30.0 Secs Units: 0.1 Secs	
		168	**[Start At PowerUp]** Enables/disables a feature to issue a Start or Run command and automatically resume running at commanded speed after drive input power is restored. Requires a digital input configured for Run or Start and a valid start contact. **ATTENTION:** Equipment damage and/or personal injury may result if this parameter is used in an inappropriate application. Do not use this function without considering applicable local, national and international codes, standards, regulations or industry guidelines.	Default: 0 "Disabled" Options: 0 "Disabled" 1 "Enabled"	
		169	**[Flying Start En]** Enables/disables the function which reconnects to a spinning motor at actual RPM when a start command is issued.	Default: 0 "Disabled" Options: 0 "Disabled" 1 "Enabled"	170
		170	**[Flying StartGain]** Sets the response of the flying start function.	Default: 4000 Min/Max: 20/32767 Units: 1	169
		174	**[Auto Rstrt Tries]** Sets the maximum number of times the drive attempts to reset a fault and restart. **ATTENTION:** Equipment damage and/or personal injury may result if this parameter is used in an inappropriate application. Do not use this function without considering applicable local, national and international codes, standards, regulations or industry guidelines.	Default: 0 Min/Max: 0/9 Units: 1	175
		175	**[Auto Rstrt Delay]** Sets the time between restart attempts when [Auto Rstrt Tries] is set to a value other than zero.	Default: 1.0 Secs Min/Max: 0.5/30.0 Secs Units: 0.1 Secs	174

File D: DYNAMIC CONTROL (File D) | Group: Restart Modes | No. 178

Parameter Name and Description — *See page 3-2 for symbol descriptions*

[Sleep Wake Mode] E C v2

Enables/disables the Sleep/Wake function. **Important:** When enabled, the following conditions must be met:

- A proper value must be programmed for [Sleep Level] & [Wake Level].
- A speed reference must be selected in [Speed Ref A Sel].
- At least one of the following must be programmed (and input closed) in [Digital Inx Sel]; "Enable," "Stop=CF," "Run," "Run Forward," "Run Reverse."

Values

Default: 0 "Disabled"

Options: 0 "Disabled"
1 "Direct" (Enabled)
2 "Invert" (Enabled)(7)

Related

ATTENTION: Enabling the Sleep-Wake function can cause unexpected machine operation during the Wake mode. Equipment damage and/or personal injury can result if this parameter is used in an inappropriate application. Do Not use this function without considering the information below and in Appendix C. In addition, all applicable local, national & international codes, standards, regulations or industry guidelines must be considered

Conditions Required to Start Drive(1)(2)(3)

Input	After Power-Up	After a Drive Fault		After a Stop Command
		Reset by Stop-CF, HIM or TB	*Reset by Clear Faults (TB)*	*HIM or TB*
Stop	Stop Closed Wake Signal	Stop Closed Wake Signal New Start or Run Cmd.(4)	Stop Closed Wake Signal	Stop Closed Direct Mode Analog Sig. > Sleep Level(6) Invert Mode Analog Sig. < Sleep Level(6) New Start or Run Cmd.(4)
Enable	Enable Closed Wake Signal(4)	Enable Closed Wake Signal New Start or Run Cmd.(4)	Enable Closed Wake Signal	Enable Closed Direct Mode Analog Sig. > Sleep Level(6) Invert Mode Analog Sig. < Sleep Level(6) New Start or Run Cmd.(4)
Run Run For. Run Rev.	Run Closed Wake Signal	New Run Cmd.(5) Wake Signal	Run Closed Wake Signal	New Run Cmd.(5) Wake Signal

(1) When power is cycled, if all of the above conditions are present after power is restored, restart will occur.

(2) If all of the above conditions are present when [Sleep-Wake Mode] is "enabled," the drive will start.

(3) The active speed reference is determined as explained in Speed Reference Control on page 1-19. The Sleep/Wake function and the speed reference may be assigned to the same input.

(4) Command must be issued from HIM, TB or network.

(5) Run Command must be cycled.

(6) Signal does not need to be greater than wake level.

(7) Enhanced firmware 2.001 & later. For Invert function, refer to [Analog In x Loss].

File D	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
DYNAMIC CONTROL (File D)	Restart Modes	179	E C v2 **[Sleep Wake Ref]** Selects the source of the input controlling the Sleep-Wake function.	Default: 2 "Analog In 2" Options: 1 "Analog In 1" 2 "Analog In 2"	
		180	E C v2 **[Wake Level]** Defines the analog input level that will start the drive.	Default: 6.000 mA, 6.000 Volts Min/Max: [Sleep Level]/20.000 mA [Sleep Level]/10.000 Volts Units: 0.001 mA 0.001 Volts	181
		181	E C v2 **[Wake Time]** Defines the amount of time at or above [Wake Level] before a Start is issued.	Default: 1.0 Secs Min/Max: 0.0/1000.0 Secs Units: 0.1 Secs	180
		182	E C v2 **[Sleep Level]** Defines the analog input level that will stop the drive.	Default: 5.000 mA, 5.000 Volts Min/Max: 4.000 mA/[Wake Level] 0.000 Volts/[Wake Level] Units: 0.001 mA 0.001 Volts	183
		183	E C v2 **[Sleep Time]** Defines the amount of time at or below [Sleep Level] before a Stop is issued.	Default: 1.0 Secs Min/Max: 0.0/1000.0 Secs Units: 0.1 Secs	182
	Power Loss	177	E C v2 **[Gnd Warn Level]** Sets the level at which a ground warning fault will occur. Configure with [Alarm Config 1].	Default: 3.0 Amps Min/Max: 1.0/5.0 Amps Units: 0.1 Amps	259
		184	**[Power Loss Mode]** Sets the reaction to a loss of input power. Power loss is recognized when: • DC bus voltage is ≤ 73% of [DC Bus Memory] and [Power Loss Mode] is set to "Coast". • DC bus voltage is ≤ 82% of [DC Bus Memory] and [Power Loss Mode] is set to "Decel".	Default: 0 "Coast" Options: 0 "Coast" 1 "Decel" 2 "Continue" E C	013 185
		185	**[Power Loss Time]** Sets the time that the drive will remain in power loss mode before a fault is issued.	Default: 0.5 Secs Min/Max: 0.0/60.0 Secs Units: 0.1 Secs	184
		187	E C v2 **[Load Loss Level]** Sets the percentage of motor nameplate torque at which a load loss alarm will occur.	Default: 200.0% Min/Max: 0.0/800.0% Units: 0.1%	211 259
		188	E C v2 **[Load Loss Time]** Sets the time that current is below the level set in [Load Loss Level] before a fault occurs.	Default: 0.0 Secs Min/Max: 0.0/300.0 Secs Units: 0.1 Secs	187

Utility File (File E)

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Direction Config	190	**[Direction Mode]** Selects the method for changing drive direction. **Mode** / **Direction Change** Unipolar — Drive Logic Bipolar — Sign of Reference Reverse Dis — Not Changable	Default: 0 "Unipolar" Options: 0 "Unipolar" 1 "Bipolar" 2 "Reverse Dis"	320 thru 327 361 thru 366
	HIM Ref Config	192	**Standard** **[Save HIM Ref]** Enables a feature to save the present frequency reference value issued by the HIM to Drive memory on power loss. Value is restored to the HIM on power up. Bit # 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 — At Powr Down Nibble 4 / Nibble 3 / Nibble 2 / Nibble 1 Factory Default Bit Values: x x x x x x x x x x x x x x x 1 1 = Save at Power Down 0 = Do Not Save x = Reserved		
			E C **[AutoMan Cnfg]** Bit # 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 — HIM Disable / ManRefPrld / Manual Mode / Save HIM Ref Nibble 4 / Nibble 3 / Nibble 2 / Nibble 1 Factory Default Bit Values: x x x x x x x x x x x x 0 1 0 1 Save HIM Ref 1 = Saves HIM reference, Reloads HIM reference at power-up. **0** = Disabled Manual Mode **1** = HIM has exclusive Start & Jog control in Manual mode. **0** = Disabled ManRefPrld **1** = Preloads auto reference into HIM upon Auto to Manual transition. **0** = Disabled HIM Disable **1** = HIM does not start drive. **0** = HIM starts drive x = Reserved	
		193	**Standard** **[Man Ref Preload]** Enables/disables a feature to automatically load the present "Auto" frequency reference value into the HIM when "Manual" is selected. Allows smooth speed transition from "Auto" to "Manual."	Default: 0 "Disabled" Options: 0 "Disabled" 1 "Enabled"	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	MOP Config	194	**[Save MOP Ref]** Enables/disables the feature that saves the present MOP frequency reference at power down or at stop.  *Factory Default Bit Values*		
		195	**[MOP Rate]** Sets rate of change of the MOP reference in response to a digital input.	Default: 1.0 Hz/s Min/Max: 0.2/[Maximum Freq] Units: 0.1 Hz/s	
	Drive Memory	196	**[Param Access Lvl]** Selects the parameter display level. Basic = Reduced param. set Advanced = Full param. set	Default: 0 "Basic" Options: 0 "Basic" 1 "Advanced" 2 "Reserved" EC	
		197	**[Reset To Defalts]** Resets all parameter values (except parameters 196, 201 & 202) to defaults. Option 1 resets drive to factory settings. Options 2 and 3 will reset drive to alternate voltage and current rating.	Default: 0 "Ready" Options: 0 "Ready" 1 "Factory" 2 "Low Voltage" 3 "High Voltage"	
		198	**[Load Frm Usr Set]** Loads a previously saved set of parameter values from a selected user set location in drive nonvolatile memory to active drive memory.	Default: 0 "Ready" Options: 0 "Ready" 1 "User Set 1" 2 "User Set 2" 3 "User Set 3"	199
		199	**[Save To User Set]** Saves the parameter values in active drive memory to a user set in drive nonvolatile memory.	Default: 0 "Ready" Options: 0 "Ready" 1 "User Set 1" 2 "User Set 2" 3 "User Set 3"	198
		200	**[Reset Meters]** Resets selected meters to zero.	Default: 0 "Ready" Options: 0 "Ready" 1 "MWh" 2 "Elapsed Time"	
		201	**[Language]** Selects the display language when using an LCD HIM. This parameter is not functional with an LED HIM.	Default: 0 "Not Selected" Options: 0 "Not Selected" 1 "English" 2 "Français" 3 "Español" 4 "Italiano" 5 "Deutsch" 6 "Reserved" 7 "Português" 8-9 "Reserved" 10 "Nederlands"	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Drive Memory	202	**[Voltage Class]** Configures the drive current rating and associates it with the selected voltage (i.e. 400 or 480V). This parameter is normally used when downloading parameter sets.	Default: Based on Drive Cat. No. Options: 2 "Low Voltage" 3 "High Voltage"	
		203	**[Drive Checksum]** Provides a checksum value that indicates whether or not a change in drive programming has occurred.	Default: Read Only Min/Max: 0/65535 Units: 1	
		204	E C v2 **[Dyn UsrSet Cnfg]** Enables/Disables dynamic selection of user parameter sets. **Important:** In dynamic mode, changes to the parameters are not saved to nonvolatile storage. Switching user sets restores the values last saved before enabling dynamic mode. 	
		205	E C v2 **[Dyn UsrSet Sel]** Selects user set if [Dyn UsrSet Cnfg] = xxx xx11. 	
		206	E C v2 **[Dyn UserSet Actv]** Read Only Indicates the active user set and if the operation is dynamic or normal. 	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Diagnostics	209	**[Drive Status 1]**	Read Only	210

Present operating condition of the drive.

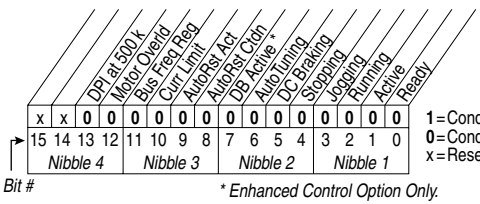
210	**[Drive Status 2]**													Read Only		209

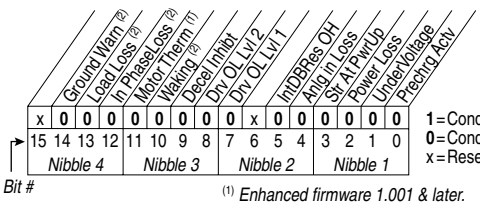
Present operating condition of the drive.



* *Enhanced Control Option Only.*

211	**[Drive Alarm 1]**													Read Only		212

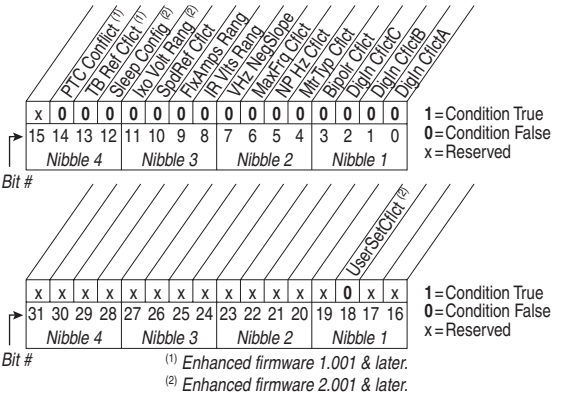
Alarm conditions that currently exist in the drive.



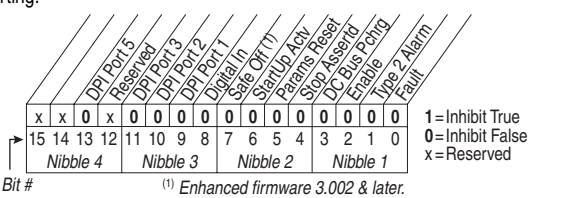
(1) *Enhanced firmware 1.001 & later.*

(2) *Enhanced firmware 2.001 & later.*

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Diagnostics	212	**[Drive Alarm 2]** Alarm conditions that currently exist in the drive.	Read Only	211
		213	**[Speed Ref Source]** Displays the source of the speed reference to the drive. (1) Enhanced Control Drives Only.	Default: Read Only Options: 0 "PI Output" 1 "Analog In 1" 2 "Analog In 2" 3-7 "Reserved" 8 "Encoder" 9 "MOP Level" 10 "Reserved" 11 "Preset Spd1" 12 "Preset Spd2" 13 "Preset Spd3" 14 "Preset Spd4" 15 "Preset Spd5" 16 "Preset Spd6" 17 "Preset Spd7" 18 "DPI Port 1" 19 "DPI Port 2" 20 "DPI Port 3" 21 "Reserved" 22 "DPI Port 5" 23-29 "Reserved" 30 "HighRes Ref"(1)	090 093 096 101
		214	**[Start Inhibits]** Displays the inputs currently preventing the drive from starting.	Read Only	



(1) *Enhanced firmware 1.001 & later.*
(2) *Enhanced firmware 2.001 & later.*

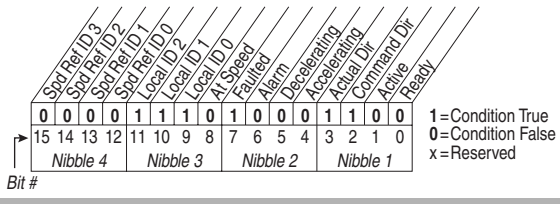


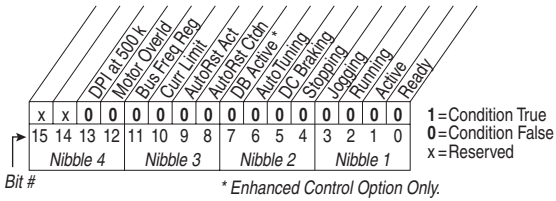
(1) *Enhanced firmware 3.002 & later.*

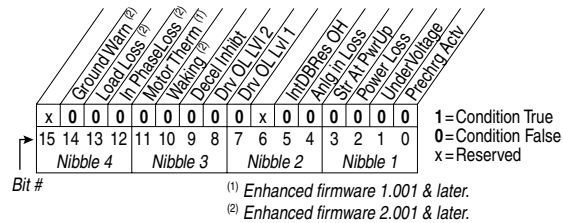
File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Diagnostics	215	**[Last Stop Source]** Displays the source that initiated the most recent stop sequence. It will be cleared (set to 0) during the next start sequence.	Default: Read Only Options: 0 "Pwr Removed" 1 "DPI Port 1" 2 "DPI Port 2" 3 "DPI Port 3" 4 "Reserved" 5 "DPI Port 5" 6 "Reserved" 7 "Digital In" 8 "Fault" 9 "Not Enabled" 10 "Sleep" 11 "Jog" 12 "Autotune" EC 13 "Precharge" EC 14 "Safe Off" EC v3	361 362 363 364 365 366
		216	**[Dig In Status]** Status of the digital inputs.  (1) *Enhanced firmware 2.001 & later.*	Read Only	361 thru 366 411
		217	**[Dig Out Status]** Status of the digital outputs.  	Read Only	380 thru 384
		218	**[Drive Temp]** Present operating temperature of the drive power section.	Default: Read Only Min/Max: –/+100 degC 0.0/100.0% EC Units: 1.0 degC 0.1% EC	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Diagnostics	219	**[Drive OL Count]** Accumulated percentage of drive overload. Continuously operating the drive over 100% of its rating will increase this value to 100% and cause a drive fault or foldback depending on the setting of [Drive OL Mode].	Default: Read Only Min/Max: 0.0/100.0% Units: 0.1%	150
		220	**[Motor OL Count]** Accumulated percentage of motor overload. Continuously operating the motor over 100% of the motor overload setting will increase this value to 100% and cause a drive fault.	Default: Read Only Min/Max: 0.0/100.0% Units: 0.1%	047 048
		221	E C v3 **[Mtr OL Trip Time]** Amount of time before a drive Overload fault(F64) occurs if the load condition remains constant. A value of 99999 means that the drive is operating under the overload level.	Default: Read Only Min/Max: 0/99999 Units: 1	220
		222	E C v3 **[Drive Status 3]** Present operating condition of the drive. Manual Mode - See *Manual Speed Sources* on page 1-19. Fast Braking - Fast Braking is active, see [Stop/Brk Mode A] on page 3-30.  *Factory Default Bit Values*	Read Only	
		223	E C v3 **[Status 3 @ Fault]** Captures and displays [Drive Status 3] bit pattern at the time of the last fault.  *Factory Default Bit Values*	Read Only	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Diagnostics	224	**[Fault Frequency]** Captures and displays the output speed of the drive at the time of the last fault.	Default: Read Only Min/Max: 0.0/+[Maximum Freq] Units: 0.1 Hz	225 thru 230
		225	**[Fault Amps]** Captures and displays motor amps at the time of the last fault.	Default: Read Only Min/Max: 0.0/[Rated Amps] × 2 Units: 0.1 Amps	224 thru 230
		226	**[Fault Bus Volts]** Captures and displays the DC bus voltage of the drive at the time of the last fault.	Default: Read Only Min/Max: 0.0/Max Bus Volts Units: 0.1 VDC	224 thru 230
		227	**[Status 1 @ Fault]** Captures and displays [Drive Status 1] bit pattern at the time of the last fault.	Read Only	209 224 thru 230
		228	**[Status 2 @ Fault]** Captures and displays [Drive Status 2] bit pattern at the time of the last fault.	Read Only	210 224 thru 230
		229	**[Alarm 1 @ Fault]** Captures and displays [Drive Alarm 1] at the time of the last fault.	Read Only	211 224 thru 230



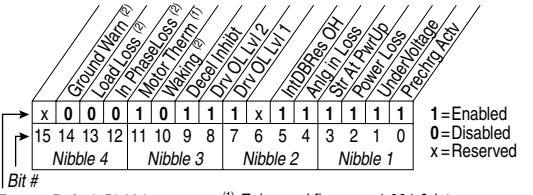




File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Diagnostics	230	**[Alarm 2 @ Fault]** Captures and displays [Drive Alarm 2] at the time of the last fault.  (1) *Enhanced firmware 1.001 & later.* (2) *Enhanced firmware 2.001 & later.*	Read Only	212 224 thru 230
		234 236	**[Testpoint 1 Sel]** **[Testpoint 2 Sel]** Selects the function whose value is displayed value in [Testpoint x Data]. These are internal values that are not accessible through parameters. See Testpoint Codes and Functions on page 4-11 for a listing of available codes and functions.	Default: 499 Min/Max: 0/999 0/65535 EC Units: 1	
		235 237 EC 32	**[Testpoint 1 Data]** **[Testpoint 2 Data]** The present value of the function selected in [Testpoint x Sel].	Default: Read Only Min/Max: 0/65535 –/+2147483647 EC Units: 1	
	Faults	238	**[Fault Config 1]** Enables/disables annunciation of the listed faults.  (1) *Enhanced firmware 1.001 & later.* (2) *Enhanced firmware 2.001 & later.*		
		240	**[Fault Clear]** Resets a fault and clears the fault queue.	Default: 0 "Ready" Options: 0 "Ready" 1 "Clear Faults" 2 "Clr Flt Que"	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Faults	241	**[Fault Clear Mode]** Enables/disables a fault reset (clear faults) attempt from any source. This does not apply to fault codes which are cleared indirectly via other actions.	Default: 1 "Enabled" Options: 0 "Disabled" 1 "Enabled"	
		242 32	**[Power Up Marker]** Elapsed hours since initial drive power up. This value will rollover to 0 after the drive has been powered on for more than the max value shown. For relevance to most recent power up see [Fault x Time].	Default: Read Only Min/Max: 0.0000/429496.7295 Hrs Units: 0.0001 Hrs	246
		243 245 247 249	**[Fault 1 Code]** **[Fault 2 Code]** **[Fault 3 Code]** **[Fault 4 Code]** A code that represents the fault that tripped the drive. The codes will appear in these parameters in the order they occur ([Fault 1 Code] = the most recent fault).	Default: Read Only Min/Max: 0/9999 0/65535 EC Units: 0	
		244 246 248 250	**[Fault 1 Time]** **[Fault 2 Time]** **[Fault 3 Time]** **[Fault 4 Time]**	Default: Read Only Min/Max: 0.0000/429496.7295 Hrs Units: 0.0001 Hrs	242
		32	The time between **initial** drive power up and the occurrence of the associated trip fault. Can be compared to [Power Up Marker] for the time from the most recent power up. [Fault x Time] – [Power Up Marker] = Time difference to the most recent power up. A negative value indicates fault occurred before most recent power up. A positive value indicates fault occurred after most recent power up. To convert this value to the number days, hours, minutes and seconds, the following formula may be used: Fault x Time / 24 hours = (# of days).(remaining time) Remaining Time x 24 hours = (# of hours).(remaining time) Remaining Time x 60 minutes = (# of minutes).(remaining seconds) Remaining Time x 60 seconds = (# of seconds) Result = (# of days).(# of hours).(# of minutes).(# of seconds) Example: 1909.2390 Hrs / 1 Day/24 Hrs = 79.551625 Days 0.551625 Days x 24 Hrs/Day = 13.239 Hrs 0.239 Hrs x 60 Min/Hr = 14.34 Min 0.34 Min x 60 Sec/Min = 20.4 Secs	

File E	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
UTILITY (File E)	Alarms	259	**[Alarm Config 1]** Enables/disables alarm conditions that will initiate an active drive alarm.		



Factory Default Bit Values

(1) *Enhanced firmware 1.001 & later.*

(2) *Enhanced firmware 2.001 & later.*

Communication File (File H)

File H	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
COMMUNICATION (File H)	Comm Control	270	**[DPI Data Rate]** Sets the baud rate for attached drive peripherals. When changing this value the drive must be reset for the change to take affect.	Default: 0 "125 kbps" Options: 0 "125 kbps" 1 "500 kbps"	
		271	**[Drive Logic Rslt]** The final logic command resulting from the combination of all DPI and discrete inputs. This parameter has the same structure as the product-specific logic command received via DPI and is used in peer to peer communications.	Read Only	
		272	**[Drive Ref Rslt]** Present frequency reference scaled as a DPI reference for peer to peer communications. The value shown is the value prior to the accel/decel ramp and any corrections supplied by slip comp, PI, etc.	Default: Read Only Min/Max: –/+32767 Units: 1	
		273	**[Drive Ramp Rslt]** Present frequency reference scaled as a DPI reference for peer to peer communications. The value shown is the value after the accel/decel ramp but prior to any corrections supplied by slip comp, PI, etc.	Default: Read Only Min/Max: –/+32767 Units: 1

File H	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
COMMUNICATION (File H)	Comm Control	274	E C **[DPI Port Select]** Selects which port reference value will appear in [DPI Port Value].	Default: 0 "Not Used" Options: 0 "Not Used" 1 "DPI Port 1" 2 "DPI Port 2" 3 "DPI Port 3" 4 "Reserved" 5 "DPI Port 5"	
		275	E C **[DPI Port Value]** Value of the DPI reference selected in [DPI Port Sel].	Default: Read Only Min/Max: –/+32767 Units: 1	
		298	E C **[DPI Ref Select]** Scales DPI on [Maximum Freq] or [Maximum Speed]. This will adjust the resolution of the DPI reference.	Default: 0 "Max Freq" Options: 0 "Max Freq" 1 "Max Speed"	
	Masks & Owners	276	**[Logic Mask]** Determines which adapters can control the drive when 598, bit 15 is set to "1." If the bit for an adapter is "0," the adapter will have no control functions except for stop.  *Factory Default Bit Values*	288 thru 297
		277	**[Start Mask]** Controls which adapters can issue start commands.	See [Logic Mask].	288 thru 297
		278	**[Jog Mask]** Controls which adapters can issue jog commands.	See [Logic Mask].	288 thru 297
		279	**[Direction Mask]** Controls which adapters can issue forward/reverse direction commands.	See [Logic Mask].	288 thru 297
		280	**[Reference Mask]** Controls which adapters can select an alternate reference; [Speed Ref A, B Sel] or [Preset Speed 1-7].	See [Logic Mask].	288 thru 297
		281	**[Accel Mask]** Controls which adapters can select [Accel Time 1, 2].	See [Logic Mask].	288 thru 297
		282	**[Decel Mask]** Controls which adapters can select [Decel Time 1, 2].	See [Logic Mask].	288 thru 297
		283	**[Fault Clr Mask]** Controls which adapters can clear a fault.	See [Logic Mask].	288 thru 297

File H	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
COMMUNICATION (File H)	Masks & Owners	284	**[MOP Mask]** Controls which adapters can issue MOP commands to the drive.	See [Logic Mask].	288 thru 297
		285	**[Local Mask]** Controls which adapters are allowed to take exclusive control of drive logic commands (except stop). Exclusive "local" control can only be taken while the drive is stopped.	See [Logic Mask].	288 thru 297
		288	**[Stop Owner]** Adapters that are presently issuing a valid stop command.  	Read Only	276 thru 285
		289	**[Start Owner]** Adapters that are presently issuing a valid start command.	See [Stop Owner].	276 thru 285
		290	**[Jog Owner]** Adapters that are presently issuing a valid jog command.	See [Stop Owner].	276 thru 285
		291	**[Direction Owner]** Adapter that currently has exclusive control of direction changes.	See [Stop Owner].	276 thru 285
		292	**[Reference Owner]** Adapter that has the exclusive control of the command frequency source selection.	See [Stop Owner].	276 thru 285
		293	**[Accel Owner]** Adapter that has exclusive control of selecting [Accel Time 1, 2].	See [Stop Owner].	140 276 thru 285
		294	**[Decel Owner]** Adapter that has exclusive control of selecting [Decel Time 1, 2].	See [Stop Owner].	142 276 thru 285
		295	**[Fault Clr Owner]** Adapter that is presently clearing a fault.	See [Stop Owner].	276 thru 285
		296	**[MOP Owner]** Adapters that are currently issuing increases or decreases in MOP command frequency.	See [Stop Owner].	276 thru 285

File H	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
COMMUNICATION (File H)	Masks & Owners	297	**[Local Owner]** Adapter that has requested exclusive control of all drive logic functions. If an adapter is in local lockout, all other functions (except stop) on all other adapters are locked out and non-functional. Local control can only be obtained when the drive is not running.	See [Stop Owner].	276 thru 285
	Datalinks	300 301 ◯	**[Data In A1] -** Link A Word 1 **[Data In A2] -** Link A Word 2 Parameter number whose value will be written from a communications device data table. Parameters that can only be changed while drive is stopped cannot be used as Datalink inputs. Entering a parameter of this type will "Disable" the link. Refer to your communications option manual for datalink information.	Default: 0 (0 = "Disabled") Min/Max: 0/387 0/545 EC 0/598 EC v2 Units: 1	
		302 303 ◯	**[Data In B1] -** Link B Word 1 **[Data In B2] -** Link B Word 2	See [Data In A1] - Link A Word 1.	
		304 305 ◯	**[Data In C1] -** Link C Word 1 **[Data In C2] -** Link C Word 2	See [Data In A1] - Link A Word 1.	
		306 307 ◯	**[Data In D1] -** Link D Word 1 **[Data In D2] -** Link D Word 2	See [Data In A1] - Link A Word 1.	
		310 311	**[Data Out A1] -** Link A Word 1 **[Data Out A2] -** Link A Word 2 Parameter number whose value will be written to a communications device data table.	Default: 0 (0 = "Disabled") Min/Max: 0/387 0/545 EC 0/598 EC v2 Units: 1	
		312 313	**[Data Out B1] -** Link B Word 1 **[Data Out B2] -** Link B Word 2	See [Data Out A1] - Link A Word 1.

		316 317	**[Data Out D1] -** Link D Word 1 **[Data Out D2] -** Link D Word 2	See [Data Out A1] - Link A Word 1.	
		308 32	EC **[HighRes Ref]** Used as a high resolution, 32 bit reference with Datalinks. –/+[Maximum Freq] or –/+[Maximum Speed] = 2147418112	Default: 0 Min/Max: –/+2147483647 Units: 1	090 093 126 128 213 298

File H	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
COMMUNICATION (File H)	Security	595	E C v2 **[Port Mask Act]** Active status for port communication.  *Factory Default Bit Values*		
		596	E C v2 **[Write Mask Cfg]** Enables/disables write access (parameters, etc.) for ports. Changes to this parameter only become affective upon power cycle, drive reset or when 597, bit 15 transitions from “1” to “0.”  *Factory Default Bit Values*		
		597	E C v2 **[Write Mask Act]** Active status of write access for ports. Bit 15 determines if network security is controlling the write mask instead of 596.	See [Port Mask Act].	
		276	**[Logic Mask]** Determines which adapters can control the drive when 597, bit 15 is set to “1”. If the bit for a port is set to “0,” the port will have no control functions except for stop.  *Factory Default Bit Values*		288 thru 297
		598	E C v2 **[Logic Mask Act]** Active status of logic mask for ports. Bit 15 determines if network security is controlling the logic mask instead of 276.	See [Port Mask Act].	

Inputs & Outputs File (File J)

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
INPUTS & OUTPUTS (File J)	Analog Inputs	320	**[Anlg In Config]** Selects the mode for the analog inputs.  *Factory Default Bit Values*		322 323
		321	**[Anlg In Sqr Root]** Enables/disables the square root function for each input.  *Factory Default Bit Values*		
		322 325	**[Analog In 1 Hi]** **[Analog In 2 Hi]** Sets the highest input value to the analog input x scaling block.	Default: 10.000 Volt 10.000 Volt Min/Max: 4.000/20.000 mA Standard, 0.000/20.000 mA EC, –/+10.000V, Units: 0.000/10.000V 0.001 mA, 0.001 Volt	091 092
		323 326	**[Analog In 1 Lo]** **[Analog In 2 Lo]** Sets the lowest input value to the analog input x scaling block.	Default: 0.000 Volt 0.000 Volt Min/Max: 4.000/20.000 mA, 0.000/10.000V (No. 323), –/+10.000V (No. 326) Units: 0.000/10.000V, 0.001 mA, 0.001 Volt	091 092
		324 327	**[Analog In 1 Loss]** **[Analog In 2 Loss]** Selects drive action when an analog signal loss is detected. Signal loss is defined as an analog signal less than 1V or 2mA. The signal loss event ends and normal operation resumes when the input signal level is greater than or equal to 1.5V or 3mA.	Default: 0 "Disabled" 0 "Disabled" Options: 0 "Disabled" 1 "Fault" 2 "Hold Input" 3 "Set Input Lo" 4 "Set Input Hi" 5 "Goto Preset1" 6 "Hold OutFreq"	091 092

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
INPUTS & OUTPUTS (File J)	Analog Outputs	340	**E C [Anlg Out Config]** Selects the mode for the analog outputs.  *Factory Default Bit Values*		
		341	**[Anlg Out Absolut]** Selects whether the signed value or absolute value of a parameter is used before being scaled to drive the analog output.  *Factory Default Bit Values*		342
		342	**[Analog Out1 Sel]** Selects the source of the value that drives the analog output.	Default: 0 "Output Freq" Options: See Table	001 002 003 004 005 007 006 012 135 136 137 138 220 219 024 441 023 025 015 377

Options		[Analog Out1 Lo] Value *Param. 341= Signed*	 *Param. 341 = Absolute*	[Analog Out1 Hi] Value

(1) Refer to Option Definitions on page 3-58.
(2) Enhanced firmware 1.001 & later.
(3) Enhanced firmware 2.002 & later.

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
INPUTS & OUTPUTS (File J)	Analog Outputs	343	**[Analog Out1 Hi]** Sets the analog output value when the source value is at maximum.	Default: 10.00 Volts Min/Max: 0.00/10.00 Volts 0.00/20.00 mA EC Units: 0.01 Volt 0.01 mA EC	340 342
		344	**[Analog Out1 Lo]** Sets the analog output value when the source value is at minimum.	Default: 0.00 Volts Min/Max: 0.00/10.00 Volts 0.00/20.00 mA EC Units: 0.01 Volt 0.01 mA EC	340 342
		354	EC **[Anlg Out1 Scale]** Sets the high value for the range of analog out scale. Entering 0.0 will disable this scale and max scale will be used. Example: If [Analog Out Sel] = "Commanded Trq," a value of 150 = 150% scale in place of the default 800%.	Default: 0.0 Min/Max: [Analog Out1 Sel] Units: 0.01	
		377	EC **[Anlg Out1 Setpt]** Controls the analog output value from a communication device. Example Set [Data In A1] to "377" which will be the value from the communication device.	Default: 0.00 Volts Min/Max: 0.00/10.00 Volts 0.00/20.00 mA EC Units: 0.01 Volt 0.01 mA EC	340

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
INPUTS & OUTPUTS (File J)	Digital Inputs	361 362 363 364 365 366	**[Digital In1 Sel]** **[Digital In2 Sel]** **[Digital In3 Sel]** **[Digital In4 Sel]** **[Digital In5 Sel]** **[Digital In6 Sel]**(7)	Default: 4 "Stop – CF"(1) Default: 5 "Start" Default: 18 "Auto/ Manual" Default: 15 "Speed Sel 1" Default: 16 "Speed Sel 2" Default: 17 "Speed Sel 3"	
			Selects the function for the digital inputs.	Options: 0 "Not Used" 1 "Enable"(6) 2 "Clear Faults"(1) 3 "Aux Fault" 4 "Stop – CF"(1) 5 "Start"(9)(11) 6 "Fwd/ Reverse"(9) 7 "Run"(10) 8 "Run Forward"(10) 9 "Run Reverse"(10) 10 "Jog"(9) "Jog1"(4) 11 "Jog Forward" 12 "Jog Reverse" 13 "Stop Mode B" 14 "Bus Reg Md B" 15-17 "Speed Sel 1-3"(2) 18 "Auto/ Manual"(8) 19 "Local" 20 "Acc2 & Dec2" 21 "Accel 2" 22 "Decel 2" 23 "MOP Inc"(12) 24 "MOP Dec"(12) 25 "Excl Link"(12) 26 "PI Enable" 27 "PI Hold" 28 "PI Reset" 29 "Reserved" 30 "Precharge En"(4)(12) 31-33 "Spd/Trq Sel1-3"(3)(13) 34 "Jog 2"(4) 35 "PI Invert"(4) 36-40 "Reserved" 41-42 "UserSet Sel1-2"(5) 43 "Run Level"(5)(12) 44 "RunFwd Level"(5)(12) 45 "RunRev Level"(5)(12) 46 "Run w/Comm"(5)(12) 47-57 "Reserved" 58 "Sync Enable"(13) 59 "Traverse Ena"(13)	100 156 162 096 140 194 380 125 088 108 124 205 620

(1) When [Digital Inx Sel] is set to option 2 "Clear Faults" the Stop button cannot be used to clear a fault condition.

(2)

3	2	1	"Speed Sel 1-3"
0	0	0	Reference A
0	0	1	Reference B
0	1	0	Preset Speed 2
0	1	1	Preset Speed 3
1	0	0	Preset Speed 4
1	0	1	Preset Speed 5
1	1	0	Preset Speed 6
1	1	1	Preset Speed 7

To access Preset Speed 1, set [Speed Ref A Sel] or [Speed Ref B Sel] to "Preset Speed 1".

(3)

3	2	1	"Spd/Trq Sel1-3"
0	0	0	Zero Torque
0	0	1	Spd Reg
0	1	0	Torque Reg
0	1	1	Min Spd/Trq
1	0	0	Max Spd/Trq
1	0	1	Sum Spd/Trq
1	1	0	Absolute
1	1	1	Zero Trq

(4) Enhanced Control Drives Only.

(5) Enhanced Firmware V2.001 and later.

(6) Opening an "Enable" input will cause the motor to coast-to-stop, ignoring any programmed Stop modes.

(7) A dedicated hardware enable input is available via a jumper selection. Refer to page 1-15 for further information.

(8) Auto/Manual - Refer to Figure 1.13 on page 1-19 for details.

(9) Typical 3-Wire Inputs - Requires that only 3-wire functions are chosen. Including 2-wire selections will cause a type 2 alarm.

(10) Typical 2-Wire Inputs - Requires that only 2-wire functions are chosen. Including 3-wire selections will cause a type 2 alarm.

(11) A "Dig In ConflictB" alarm will occur if a "Start" input is programmed without a "Stop" input. Type 2 Alarms - Some digital input programming may cause conflicts that will result in a Type 2 alarm. Example: [Digital In1 Sel] set to 5 "Start" in 3-wire control and [Digital In2 Sel] set to 7 "Run" in 2-wire. Refer to Alarm Descriptions on page 4-7 for information on resolving this type of conflict.

(12) Refer to Option Definitions on page 3-58.

(13) Enhanced Firmware V3.002 and later.

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
INPUTS & OUTPUTS (File J)	Digital Inputs	411	E C **[DigIn DataLogic]** Provides data to the logical operations that will be done with the digital inputs when parameter 056 is set to option 9 “DigIn DatLog”.  *Factory Default Bit Values*	056
	Digital Outputs	379	E C **[Dig Out Setpt]** Controls output relays (CRx) when parameter 380 or 384 is set to option 30 “Param Cntl”.  *Factory Default Bit Values*	

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values			Related
INPUTS & OUTPUTS (File J)	Digital Outputs	380 384	**[Digital Out1 Sel]** **[Digital Out2 Sel]** Selects the drive status that will energize a (CRx) output relay. (1) Any relay programmed as Fault or Alarm will energize (pick up) when power is applied to drive and deenergize (drop out) when a fault or alarm exists. Relays selected for other functions will energize only when that condition exists and will deenergize when condition is removed. Refer to page 1-14. (2) Activation level is defined in [Dig Outx Level] below. (3) Enhanced Control Drives Only. (4) Enhanced Firmware V3.002 and later.	Default: Options:	1 4 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31-57 58 59	"Fault" "Run" "Fault"(1) "Alarm"(1) "Ready" "Run" "Forward Run" "Reverse Run" "Auto Restart" "Powerup Run" "At Speed" "At Freq"(2) "At Current"(2) "At Torque"(2) "At Temp"(2) "At Bus Volts"(2) "At PI Error"(2) "DC Braking" "Curr Limit" "Economize" "Motor Overld" "Power Loss" "Input 1 Link" "Input 2 Link" "Input 3 Link" "Input 4 Link" "Input 5 Link" "Input 6 Link" "PI Enabled"(3) "PI Hold"(3) "Drive Overld"(3) "Param Cntl"(3) ""Reserved" "Manual Mode"(4) "Fast Braking"(4)	381 385 382 383 002 001 003 004 218 012 137 157 147 053 048 184
		381 385	**[Dig Out1 Level]** **[Dig Out2 Level]** Sets the relay activation level for options 10 – 15 in [Digital Outx Sel]. Units are assumed to match the above selection (i.e. "At Freq" = Hz, "At Torque" = Amps).	Default: Min/Max: Units:	0.0 0.0 0.0/819.2 0.1		380
		382 386	**[Dig Out1 OnTime]** **[Dig Out2 OnTime]** Sets the "ON Delay" time for the digital outputs. This is the time between the occurrence of a condition and activation of the relay.	Default: Min/Max: Units:	0.0 Secs 0.0 Secs 0.0/600.0 Secs 0.1 Secs		380

File J	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
INPUTS & OUTPUTS (File J)	Digital Outputs	383 387	**[Dig Out1 OffTime]** **[Dig Out2 OffTime]** Sets the "OFF Delay" time for the digital outputs. This is the time between the disappearance of a condition and de-activation of the relay.	Default: 0.0 Secs 0.0 Secs Min/Max: 0.0/600.0 Secs Units: 0.1 Secs	380

Selected Option Definitions – [Analog Outx Sel], [Digital Inx Sel], [Digital Outx Sel]

Option	Description	Related
At Speed	Relay changes state when drive has reached commanded speed.	380
Excl Link	Links digital input to a digital output if the output is set to "Input 1-6 Link."	361
Input 1-6 Link	When Digital Output 1 is set to of these (i.e. Input 3 Link) in conjunction with Digital Input 3 set to "Excl Link," the Digital Input 3 state (on/off) is echoed in the Digital Output 1.	380
Manual Mode	Either the HIM or I/O Terminal Block (analog input) has control of the speed reference.	380
MOP Dec	Decrements speed reference as long as input is closed.	361
MOP Inc	Increments speed reference as long as input is closed.	361
MtrTrqCurRef	Torque producing current reference.	342
Param Cntl	Parameter controlled analog output allows PLC to control analog outputs through data links. Set in [AnlgX Out Setpt], parameters 377-378.	342
Param Cntl	Parameter controlled digital output allows PLC to control digital outputs through data links. Set in [Dig Out Setpt], parameter 379.	342
PI Reference	Reference for PI block (see Process PI for Standard Control on page C-11).	342
Precharge En	Forces drive into precharge state. Typically controlled by auxiliary contact on the disconnect at the DC input to the drive.	361
Run Level RunFwd Level RunRev Level	Provides a run level input. They do not require a transition for enable or fault, but a transition is still required for a stop.	
Run w/Comm	Allows the comms start bit to operate like a run with the run input on the terminal block. Ownership rules apply.	
SpdFdBk NoFilt	Provides an unfiltered value to an analog output. The filtered version "Speed Fdbk" includes a 125 ms filter.	342
Sync Enable	The fiber feature Synchronized Speed Change has been enabled. Allows a coordinated change in drive speeds to change machine speed.	622
Torque Est	Calculated percentage of rated motor torque.	342
Traverse Enable	The Traverse function has been enabled. This adds a triangle wave and square wave modulation to the speed reference.	623 624 625 626

Applications File (File K)

File K	Group	No.	Parameter Name & Description *See page 3-2 for symbol descriptions*	Values	Related
APPLICATIONS (File K)	Fiber Functions	620	E C v3 **[Fiber Control]** Controls the Sync and Traverse functions.  *Factory Default Bit Values*		
		621	E C v3 **[Fiber Status]** Read Only Status of Sync and Traverse functions.  *Factory Default Bit Values*		
		622	E C v3 **[Sync Time]** The time to ramp from the "held speed reference" to the current speed reference, after the Sync input is de-energized.	Default: 0.0 Secs Min/Max: 0.0/3600.0 Secs Units: 0.1 Secs	
		623	E C v3 **[Traverse Inc]** Sets the time period of increasing frequency.	Default: 0.00 Secs Min/Max: 0.00/30.00 Secs Units: 0.01 Secs	
		624	E C v3 **[Traverse Dec]** Sets the time period of decreasing frequency.	Default: 0.00 Secs Min/Max: 0.00/30.00 Secs Units: 0.01 Secs	
		625	E C v3 **[Max Traverse]** Sets the amplitude of the triangle wave speed modulation.	Default: 0.00 Hz Min/Max: 0.00/Maximum Speed Units: 0.01 Hz	
		626	E C v3 **[P Jump]** Sets the amplitude of the square wave speed modulation.	Default: 0.00 Hz Min/Max: 0.00/Maximum Speed Units: 0.01 Hz

Troubleshooting

Chapter 4 provides information to guide you in troubleshooting the PowerFlex 70. Included is a listing and description of drive faults (with possible solutions, when applicable) and alarms.

For information on...	See page...

Testpoint Codes and Functions	4-11
Common Symptoms and Corrective Actions	4-12

Faults and Alarms

A fault is a condition that stops the drive. There are three fault types.

Type	Fault Description	
①	Auto-Reset Run	When this type of fault occurs, and [Auto Rstrt Tries] (see page 3-33) is set to a value greater than "0," a user-configurable timer, [Auto Rstrt Delay] (see page 3-33) begins. When the timer reaches zero, the drive attempts to automatically reset the fault. If the condition that caused the fault is no longer present, the fault will be reset and the drive will be restarted.
②	Non-Resettable	This type of fault normally requires drive or motor repair. The cause of the fault must be corrected before the fault can be cleared. The fault will be reset on power up after repair.
③	User Configurable	These faults can be enabled/disabled to annunciate or ignore a fault condition.

An alarm is a condition that, if left untreated, may stop the drive. There are two alarm types.

Type	Alarm Description	
①	User Configurable	These alarms can be enabled or disabled through [Alarm Config 1] on page 3-46.
②	Non-Configurable	These alarms are always enabled.

Drive Status

The condition or state of your drive is constantly monitored. Any changes will be indicated through the LEDs and/or the HIM (if present).

LED Indications

See page 2-2 for information on LED status indicators.

HIM Indication

The LCD and LED HIMs also provide visual notification of a fault or alarm condition.

Condition	Display
Drive is indicating a fault. The LCD HIM immediately reports the fault condition by displaying the following. • "Faulted" appears in the status line • Fault number • Fault name • Time that has passed since fault occurred Press Esc to regain HIM control. The LED HIM reports the fault condition by displaying the specific fault code.	LCD HIM  LED HIM
Drive is indicating an alarm. The LCD HIM immediately reports the alarm condition by displaying the following. • Alarm name (Type 2 alarms only) • Alarm bell graphic	LCD HIM  LED HIM No indication.

Manually Clearing Faults

Step	Key(s)
1. Press Esc to acknowledge the fault. The fault information will be removed so that you can use the HIM.	Esc
2. Address the condition that caused the fault. The cause must be corrected before the fault can be cleared.	
3. After corrective action has been taken, clear the fault by one of these methods. • Press Stop • Cycle drive power • Set parameter 240 [Fault Clear] to "1." • "Clear Faults" on the HIM Diagnostic menu.	

Fault Descriptions

Table 4.A Fault Types, Descriptions and Actions

Fault	No.	Type(1)	Description	Action
Analog In Loss	29	① ③	An analog input is configured to fault on signal loss. A signal loss has occurred. Configure with [Anlg In 1, 2 Loss] on page 3-52.	1. Check parameters. 2. Check for broken/loose connections at inputs.
Anlg Cal Chksum	108		The checksum read from the analog calibration data does not match the checksum calculated.	Replace drive.
Auto Rstrt Tries	33	③	Drive unsuccessfully attempted to reset a fault and resume running for the programmed number of [Flt RstRun Tries]. Enable/Disable with [Fault Config 1] on page 3-44.	Correct the cause of the fault and manually clear.
AutoTune Aborted	80		Autotune function was canceled by the user or a fault occurred.	Restart procedure.
Auxiliary Input	2	①	Auxiliary input interlock is open.	Check remote wiring.
Decel Inhibit	24	③	The drive is not following a commanded deceleration because it is attempting to limit bus voltage.	1. Verify input voltage is within drive specified limits. 2. Verify system ground impedance follows proper grounding techniques. 3. Disable bus regulation and/or add dynamic brake resistor and/or extend deceleration time.
Drive OverLoad	64		Drive rating of 110% for 1 minute or 150% for 3 seconds has been exceeded.	Reduce load or extend Accel Time.

Fault	No.	Type(1)	Description	Action
Drive Powerup E C v2	49		No fault displayed. Used as a Power Up Marker in the Fault Queue indicating that the drive power has been cycled.	
Enable Hardware E C	111		Safe-Off board is not installed and pins 3 and 4 of the Safe-Off Connector are not jumpered.	Install Safe-Off board or jumper pins 3 and 4.
			Safe-Off board has failed.	Replace Safe-Off board.
			Hardware enable circuitry failed.	Replace control board.
Encoder Loss E C v2	91		One or both encoder channel signals is missing.	1. Check Wiring. 2. Replace encoder.
Excessive Load	79		Motor did not come up to speed in the allotted time during autotune.	1. Uncouple load from motor. 2. Repeat Autotune.
Faults Cleared E C v2	52		No fault displayed. Used as a marker in the Fault Queue indicating that the fault clear function was performed.	
Flt QueueCleared E C v2	51		No fault displayed. Used as a marker in the Fault Queue indicating that the clear queue function was performed.	
FluxAmpsRef Rang	78		The value for flux amps determined by the Autotune procedure exceeds the programmed [Motor NP FLA].	1. Reprogram [Motor NP FLA] with the correct motor nameplate value. 2. Repeat Autotune.
Heatsink OvrTemp	8	①	Heatsink temperature exceeds 100% of [Drive Temp].	1. Verify that maximum ambient temperature has not been exceeded. 2. Check fan. 3. Check for excess load.
HW OverCurrent	12	①	The drive output current has exceeded the hardware current limit.	Check programming. Check for excess load, improper DC boost setting, DC brake volts set too high or other causes of excess current.
Incompat MCB-PB	106	②	Drive rating information stored on the power board is incompatible with the main control board.	Load compatible version files into drive.
Input Phase Loss E C v2	17		The DC bus ripple has exceeded a preset level.	Check incoming power for a missing phase/blown fuse.
IR Volts Range	77		"Calculate" is the autotune default and the value determined by the autotune procedure for IR Drop Volts is not in the range of acceptable values.	Re-enter motor nameplate data.
IXo VoltageRange E C v2	87		Voltage calculated for motor inductive impedance exceeds 25% of [Motor NP Volts].	1. Check for proper motor sizing. 2. Check for correct programming of [Motor NP Volts], parameter 41. 3. Additional output impedance may be required.
Load Loss E C v2	15		Drive output torque current is below [Load Loss Level] for a time period greater than [Load Loss time].	1. Verify connections between motor and load. 2. Verify level and time requirements.

Fault	No.	Type(1)	Description	Action
Motor OverLoad	7	① ③	Internal electronic overload trip. Enable/Disable with [Fault Config 1] on page 3-44.	An excessive motor load exists. Reduce load so drive output current does not exceed the current set by [Motor NP FLA].
Motor Thermistor E C	16		Thermistor output is out of range.	1. Verify that thermistor is connected. 2. Motor is overheated. Reduce load.
Overspeed Limit	25	①	Functions such as Slip Compensation or Bus Regulation have attempted to add an output frequency adjustment greater than that programmed in [Overspeed Limit].	Remove excessive load or overhauling conditions or increase [Overspeed Limit].
OverVoltage	5	①	DC bus voltage exceeded maximum value.	Monitor the AC line for high line voltage or transient conditions. Bus overvoltage can also be caused by motor regeneration. Extend the decel time or install dynamic brake option.
Parameter Chksum	100	②	The checksum read from the board does not match the checksum calculated.	1. Restore defaults. 2. Reload User Set if used.
Params Defaulted	48		The drive was commanded to write default values to EEPROM.	1. Clear the fault or cycle power to the drive. 2. Program the drive parameters as needed.
Phase U to Grnd	38		A phase to ground fault has been detected between the drive and motor in this phase.	1. Check the wiring between the drive and motor. 2. Check motor for grounded phase. 3. Replace drive.
Phase V to Grnd	39			
Phase W to Grnd	40			
Phase UV Short	41		Excessive current has been detected between these two output terminals.	1. Check the motor and drive output terminal wiring for a shorted condition. 2. Replace drive.
Phase VW Short	42			
Phase UW Short	43			
Port 1-5 DPI Loss	81-85		DPI port stopped communicating. A SCANport device was connected to a drive operating DPI devices at 500k baud.	1. If adapter was not intentionally disconnected, check wiring to the port. Replace wiring, port expander, adapters, Main Control Board or complete drive as required. 2. Check HIM connection. 3. If an adapter was intentionally disconnected and the [Logic Mask] bit for that adapter is set to “1”, this fault will occur. To disable this fault, set the [Logic Mask] bit for the adapter to “0.”
Port 1-5 Adapter	71-75		The communications card has a fault.	Check DPI device event queue and corresponding fault information for the device.

Fault	No.	Type[1]	Description	Action
Power Loss	3	① ③	DC bus voltage remained below 85% of nominal for longer than [Power Loss Time]. Enable/ Disable with [Fault Config 1] on page 3-44.	Monitor the incoming AC line for low voltage or line power interruption.
Pwr Brd Chksum1	104		The checksum read from the EEPROM does not match the checksum calculated from the EEPROM data.	Clear the fault or cycle power to the drive.
Pwr Brd Chksum2	105	②	The checksum read from the board does not match the checksum calculated.	1. Cycle power to the drive. 2. If problem persists, replace drive.
Replaced MCB-PB	107	②	Main Control Board was replaced and parameters were not programmed.	1. Restore defaults. 2. Reprogram parameters.
Shear Pin	63	③	Programmed [Current Lmt Val] has been exceeded. Enable/ Disable with [Fault Config 1] on page 3-44.	Check load requirements and [Current Lmt Val] setting.
SW OverCurrent	36	①	Drive output current has exceeded the 1ms current rating. This rating is greater than the 3 second current rating and less than the hardware overcurrent fault level. It is typically 200-250% of the drive continuous rating.	Check for excess load, improper DC boost setting. DC brake volts set too high.
Trnsistr OvrTemp	9	①	Output transistors have exceeded their maximum operating temperature.	1. Verify that maximum ambient temperature has not been exceeded. 2. Check fan. 3. Check for excessive load.
UnderVoltage	4	① ③	DC bus voltage fell below the minimum value of 509V DC at 600V input, 407V DC at 400/ 480V input or 204V DC at 200/ 240V input. Enable/Disable with [Fault Config 1] on page 3-44.	Monitor the incoming AC line for low voltage or power interruption.
UserSet1 Chksum	101	②	The checksum read from the user set does not match the checksum calculated.	Re-save user set.
UserSet2 Chksum	102	②		
UserSet3 Chksum	103	②		

(1) See page 4-1 for a description of fault types.

Clearing Alarms

Alarms are automatically cleared when the condition that caused the alarm is no longer present.

Alarm Descriptions

Table 4.C Alarm Descriptions and Actions

Alarm	No.	Type(1)	Description
Analog in Loss	5	①	An analog input is configured for “Alarm” on signal loss and signal loss has occurred.
Bipolar Conflict	20	②	Parameter 190 [Direction Mode] is set to “Bipolar” or “Reverse Dis” and one or more of the following digital input functions is configured: “Fwd/Reverse”, “Run Forward”, “Run Reverse”, “Jog Forward”, or “Jog Reverse”.
Decel Inhibit	10	①	Drive is being inhibited from decelerating.

Alarm	No.	Type(1)	Description
Dig In ConflictA	17	②	Digital input functions are in conflict. Combinations marked with a "●" will cause an alarm.

	Acc2/Dec2	Accel 2	Decel 2	Jog	Jog Fwd	Jog Rev	Fwd/Rev
Acc2 / Dec2		●	●				
Accel 2	●						
Decel 2	●						
Jog					●	●	
Jog Fwd				●			●
Jog Rev				●			●
Fwd / Rev					●	●	

Dig In ConflictB	18	②	A digital Start input has been configured without a Stop input or other functions are in conflict. Combinations that conflict are marked with a "●" and will cause an alarm.						

	Start	Stop–CF	Run	Run Fwd	Run Rev	Jog	Jog Fwd	Jog Rev	Fwd/ Rev
Start			●	●	●		●	●	
Stop–CF									
Run	●			●	●		●	●	
Run Fwd	●		●			●			●
Run Rev	●		●			●			●
Jog				●	●				
Jog Fwd	●		●						
Jog Rev	●		●						
Fwd / Rev				●	●				

Dig In ConflictC	19	②	More than one physical input has been configured to the same input function. Multiple configurations are not allowed for the following input functions.			
			Forward/Reverse	Run Reverse	Bus Regulation Mode B	
			Speed Select 1	Jog Forward	Acc2 / Dec2	
			Speed Select 2	Jog Reverse	Accel 2	
			Speed Select 3	Run	Decel 2	
			Run Forward	Stop Mode B		
Drive OL Level 1	8	①	The calculated IGBT temperature requires a reduction in PWM frequency. If [Drive OL Mode] is disabled and the load is not reduced, an overload fault will eventually occur.			
Drive OL Level 2	9	①	The calculated IGBT temperature requires a reduction in Current Limit. If [Drive OL Mode] is disabled and the load is not reduced, an overload fault will eventually occur.			
FluxAmpsRef Rang	26	②	The calculated or measured Flux Amps value is not within the expected range. Verify motor data and rerun motor tests.			
Ground Warn E C v2	15	①	Ground current has exceeded the level set in [Gnd Warn Level].			
In Phase Loss E C v2	13	①	The DC bus ripple has exceeded the level in [Phase Loss Level].			
IntDBRes OvrHeat	6	①	The drive has temporarily disabled the DB regulator because the resistor temperature has exceeded a predetermined value.			

Alarm	No.	Type(1)	Description
IR Volts Range	25	②	The drive auto tuning default is “Calculate” and the value calculated for IR Drop Volts is not in the range of acceptable values. This alarm should clear when all motor nameplate data is properly entered.
IXo VoltageRange E C v2	28	②	Motor leakage inductance is out of range.
Load Loss E C v2	14		Output torque current is below [Load Loss Level] for a time period greater than [Load Loss time].
MaxFreq Conflict	23	②	The sum of [Maximum Speed] and [Overspeed Limit] exceeds [Maximum Freq]. Raise [Maximum Freq] or lower [Maximum Speed] and/or [Overspeed Limit] so that the sum is less than or equal to [Maximum Freq].
Motor Thermistor E C	12		[Fault Config 1] or [Alarm Config 1] Bit 7 “Motor Therm” is enabled and the analog Input voltage is <0.2 Volts or >5.0 Volts.
Motor Type Cflct	21	②	[Motor Type] has been set to “Synchr Reluc” or “Synchr PM” and one or more of the following exist: • [Torque Perf Mode] = “Sensrls Vect,” “SV Economize” or “Fan/Pmp V/Hz.” • [Flux Up Time] is greater than 0.0 Secs. • [Speed Mode] is set to “Slip Comp.” • [Autotune] = “Static Tune” or “Rotate Tune.”
NP Hz Conflict	22	②	Fan/pump mode is selected in [Torq Perf Mode] and the ratio of [Motor NP Hertz] to [Maximum Freq] is greater than 26.
Power Loss	3	①	Drive has sensed a power line loss.
Precharge Active	1	①	Drive is in the initial DC bus precharge state.
PTC Conflict E C	31		[Fault Config 1] or [Alarm Config 1] Bit 7 “Motor Therm” is enabled and Analog In 1 is set to milliamperes.
Sleep Config E C v2	29	②	Sleep/Wake configuration error. With [Sleep-Wake Mode] = “Direct,” possible causes include: drive is stopped and [Wake Level] < [Sleep Level]. “Stop=CF,” “Run,” “Run Forward,” or “Run Reverse.” is not configured in [Digital Inx Sel].
Speed Ref Cflct	27	②	[Speed Ref x Sel] or [PI Reference Sel] is set to “Reserved”.
Start At PowerUp	4	①	[Start At PowerUp] is enabled. Drive may start at any time within 10 seconds of drive powerup.

Alarm	No.	Type(1)	Description
TB Man Ref Cflct E C	30		Occurs when: • "Auto/Manual" is selected (default) for [Digital In3 Sel], parameter 363 *and* • [TB Man Ref Sel], parameter 96 has been reprogrammed. No other use for the selected analog input may be programmed. Example: If [TB Man Ref Sel] is reprogrammed to "Analog In 2," all of the factory default uses for "Analog In 2" must be reprogrammed (such as parameters 90, 117, 128 and 179). See also Auto/Manual Examples on page 1-20. To correct: • Verify/reprogram the parameters that reference an analog input *or* • Reprogram [Digital In3] to another function or "Unused."
UnderVoltage	2	①	The bus voltage has dropped below a predetermined value.
UserSet Conflict E C v2	51	②	[Digital Inx Sel] values differ in different user sets.
VHz Neg Slope	24	②	[Torq Perf Mode] = "Custom V/Hz" and the V/Hz slope is negative.
Waking E C v2	11	①	The Wake timer is counting toward a value that will start the drive.

(1) See page 4-1 for a description of alarm types.

11-99	Reserved for Factory Use

(1) Use the equation below to calculate total Lifetime MegaWatt Hours.

$$\left(\frac{\text{Value of Code 9}}{\text{Value of Code 10}} \times 0.1\right) + \text{Value of Code 5} = \text{Total Lifetime MegaWatt Hours}$$

Common Symptoms and Corrective Actions

Drive does not Start from Start or Run Inputs wired to the terminal block.

Cause(s)	Indication	Corrective Action
Drive is Faulted	Flashing red status light	Clear fault. • Press Stop • Cycle power • Set [Fault Clear] to 1 (See page 3-44) • "Clear Faults" on the HIM Diagnostic menu
Incorrect input wiring. See page 1-17 for wiring examples. • 2 wire control requires Run, Run Forward, Run Reverse or Jog input. • 3 wire control requires Start and Stop inputs • Jumper from terminal 7 to 8 is required.	None	Wire inputs correctly and/or install jumper.
Incorrect digital input programming. • Mutually exclusive choices have been made (i.e., Jog and Jog Forward). • 2 wire and 3 wire programming may be conflicting. • Exclusive functions (i.e, direction control) may have multiple inputs configured. • Stop is factory default and is not wired.	None	Program [Digital Inx Sel] for correct inputs. (See page 3-55) Start or Run programming may be missing.
	Flashing yellow status light and "DigIn CflctB" indication on LCD HIM. [Drive Status 2] shows type 2 alarm(s).	Program [Digital Inx Sel] to resolve conflicts. (See page 3-55) Remove multiple selections for the same function. Install stop button to apply a signal at stop terminal.

Drive does not Start from HIM.

Cause(s)	Indication	Corrective Action
Drive is programmed for 2 wire control. HIM Start button is disabled for 2 wire control.	None	If 2 wire control is required, no action is necessary. If 3 wire control is required, program [Digital Inx Sel] for correct inputs. (See page 3-55)

Drive does not respond to changes in speed command.

Cause(s)	Indication	Corrective Action
No value is coming from the source of the command.	LCD HIM Status Line indicates “At Speed” and output is 0 Hz.	1. If the source is an analog input, check wiring and use a meter to check for presence of signal. 2. Check [Commanded Freq] for correct source. (Param #002, page 3-11)
Incorrect reference source has been programmed.	None	3. Check [Speed Ref Source] for the source of the speed reference. (Param #213, page 3-40) 4. Reprogram [Speed Ref A Sel] for correct source. (Param #090, page 3-22)
Incorrect Reference source is being selected via remote device or digital inputs.	None	5. Check [Drive Status 1], bits 12 and 13 for unexpected source selections. (Param #209, page 3-39) 6. Check [Dig In Status] to see if inputs are selecting an alternate source. (Param #216, page 3-41) 7. Reprogram digital inputs to correct “Speed Sel x” option. (See page 3-55)

Motor and/or drive will not accelerate to commanded speed.

Cause(s)	Indication	Corrective Action
Acceleration time is excessive.	None	Reprogram [Accel Time x]. (See page 3-29)
Excess load or short acceleration times force the drive into current limit, slowing or stopping acceleration.	None	Check [Drive Status 2], bit 10 to see if the drive is in Current Limit. (See page 3-39) Remove excess load or reprogram [Accel Time x]. (See page 3-29)
Speed command source or value is not as expected.	None	Check for the proper Speed Command using Steps 1 through 7 above.
Programming is preventing the drive output from exceeding limiting values.	None	Check [Maximum Speed] (Param #082, page 3-20) and [Maximum Freq] (Param #055, page 3-14) to assure that speed is not limited by programming.

Motor operation is unstable.

Cause(s)	Indication	Corrective Action
Motor data was incorrectly entered or Autotune was not performed.	None	1. Correctly enter motor nameplate data. 2. Perform “Static” or “Rotate” Autotune procedure. (Param #061, page 3-16)

Drive will not reverse motor direction.

Cause(s)	Indication	Corrective Action
Digital input is not selected for reversing control.	None	Check [Digital Inx Sel] (See page 3-55). Choose correct input and program for reversing mode.
Digital input is incorrectly wired.	None	Check input wiring. (See page 1-14)
Direction mode parameter is incorrectly programmed.	None	Reprogram [Direction Mode] for analog "Bipolar" or digital "Unipolar" control. (Param #190, page 3-36)
Motor wiring is improperly phased for reverse.	None	Switch two motor leads.
A bipolar analog speed command input is incorrectly wired or signal is absent.	None	1. Use meter to check that an analog input voltage is present. 2. Check wiring. (See page 1-17) Positive voltage commands forward direction. Negative voltage commands reverse direction.

Stopping the drive results in a Decel Inhibit fault.

Cause(s)	Indication	Corrective Action
The bus regulation feature is enabled and is halting deceleration due to excessive bus voltage. Excess bus voltage is normally due to excessive regenerated energy or unstable AC line input voltages. Internal timer has halted drive operation.	Decel Inhibit fault screen. LCD Status Line indicates "Faulted".	1. See Attention statement on Preface-4. 2. Reprogram bus regulation (parameters 161 and 162) to eliminate any "Adjust Freq" selection. 3. Disable bus regulation (parameters 161 and 162) and add a dynamic brake. 4. Correct AC input line instability or add an isolation transformer. 5. Reset drive.

	✔	✔	✔	CE	Marked for all applicable European Directives (1) EMC Directive (89/336/EEC) EN 61800-3 Adjustable Speed electrical power drive systems Low Voltage Directive (73/23/EEC) EN 50178 Electronic Equipment for use in Power Installations
	✔	✔	✔	N223	Certified to AS/NZS, 1997 Group 1, Class A
			✔	NSF	Certified to Criteria C-2, 1983.
	✔	✔	✔	EMC TÜV EN 50178 TÜV Rheinland FS	Certified to EN 954-1, Category 3 for 240V, 400V, and 480V ratings of PowerFlex 70 Enhanced Control with DriveGuard Safe-Off option.
	✔	✔	✔		TUV Approved to EN 954-1, Category 3 for 600V ratings of PowerFlex 70 Enhanced Control with DriveGuard Safe-Off option.
	The drive is also designed to meet the appropriate portions of the following specifications: NFPA 70 - US National Electrical Code NEMA ICS 3.1 - Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems. IEC 146 - International Electrical Code.				
Electrical	Voltage Tolerance:				–10% of minimum, +10% of maximum. See page C-14 for Full Power and Operating Range.
	Frequency Tolerance:				47-63 Hz.
	Input Phases:				Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current.
	Displacement Power Factor (all drives):				0.98 across speed range.
	Efficiency:				97.5% at rated amps, nominal line volts.
	Maximum Short Circuit Rating:				200,000 Amps symmetrical.
	Max. Short Circuit Current Rating: Using Recommended Fuse or Circuit Breaker Type				Maximum short circuit current rating to match specified fuse/circuit breaker capability.
Control	Method:				Sine coded PWM with programmable carrier frequency. Ratings apply to all drives.
	Carrier Frequency:				2, 3, 4, 5, 6, 7, 8, 9 & 10 kHz Standard. 2, 4, 8 & 12 kHz EC. Drive rating based on 4 kHz.
	Output Voltage Range:				0 to rated motor voltage
	Output Frequency Range:				0 to 400 Hz Standard. 0 to 500 Hz EC.
	Frequency Accuracy Digital Input: Analog Input:				 Within ±0.01% of set output frequency. Within ±0.4% of maximum output frequency.

Category	Specification	
Control *(continued)*	Frequency Control - Speed Regulation	with Slip Compensation (V/Hz Mode) 0.5% of base speed across 40:1 speed range 40:1 operating range 10 rad/sec bandwidth
		with Slip Compensation (Sensorless Vector Mode) 0.5% of base speed across 80:1 speed range 80:1 operating range 20 rad/sec bandwidth
		with feedback (Sensorless Vector Mode) EC 0.1% of base speed across 80:1 speed range 80:1 operating range 20 rad/sec bandwidth
	Speed Control - Speed Regulation	without feedback (Vector Control Mode) EC 0.1% of base speed across 120:1 speed range 120:1 operating range 30 rad/sec bandwidth
		with feedback (Vector Control Mode) EC 0.001% of base speed across 120:1 speed range 1000:1 operating range 125 rad/sec bandwidth
	Torque Regulation	without feedback +/-10% EC
		with feedback +/-5% EC
	Selectable Motor Control:	Sensorless Vector with full tuning. Standard V/Hz with full custom capability and vector control.
	Stop Modes:	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Ramp-to-Hold and S-curve.
	Accel/Decel:	Two independently programmable accel & decel times. Each time may be programmed from 0-3600 seconds in 0.1 sec. increments
	Intermittent Overload:	110% Overload capability for up to 1 minute 150% Overload capability for up to 3 seconds
	Current Limit Capability:	Proactive Current Limit programmable from 20 to 160% of rated output current. Independently programmable proportional and integral gain.
	Electronic Motor Overload Protection:	Class 10 protection with speed sensitive response. Investigated by U.L. to comply with N.E.C. Article 430. U.L. File E59272, volume 12.
Encoder	Type:	Incremental, dual channel
	Supply:	5V/12V Configurable +/-5%
	Quadrature:	90° +/-27° at 25° C.
	Duty Cycle:	50% +10%
	Requirements	Encoders must be line driver type, quadrature (dual channel) or pulse (single channel), single-ended or differential and capable of supplying a minimum of 10 mA per channel. The Encoder Interface Board accepts 5V or 12V DC square-wave with a minimum high state voltage of 3.5V DC (5V mode) and 7.0V DC (12V mode). Maximum low state voltage is 1V DC (for both 5V and 12V modes). Maximum input frequency is 250 kHz.

(1) Applied noise impulses may be counted in addition to the standard pulse train causing erroneously high [Pulse Freq] readings.

Communication Configurations

Typical Programmable Controller Configurations

Important: If block transfers are programmed to continuously write information to the drive, care must be taken to properly format the block transfer. If attribute 10 is selected for the block transfer, values will be written only to RAM and will not be saved by the drive. This is the preferred attribute for continuous transfers. If attribute 9 is selected, each program scan will complete a write to the drives non-volatile memory (EEprom). Since the EEprom has a fixed number of allowed writes, continuous block transfers will quickly damage the EEprom. Do Not assign attribute 9 to continuous block transfers. Refer to the individual communications adapter User Manual for additional details.

Logic Command/Status Words

Figure A.1 Logic Command Word

Logic Bits																
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	**Command**	**Description**
															x	Stop[1]	0 = Not Stop 1 = Stop
														x		Start[1][2]	0 = Not Start 1 = Start
													x			Jog	0 = Not Jog 1 = Jog
												x				Clear Faults	0 = Not Clear Faults 1 = Clear Faults

	x	x	x													Reference Select[3]	000 = No Command 001 = Ref. 1 (Ref A Select) 010 = Ref. 2 (Ref B Select) 011 = Ref. 3 (Preset 3) 100 = Ref. 4 (Preset 4) 101 = Ref. 5 (Preset 5) 110 = Ref. 6 (Preset 6) 111 = Ref. 7 (Preset 7)
x																MOP Decrement	0 = Not Decrement 1 = Decrement

(1) A “0 = Not Stop” condition (logic 0) must first be present before a “1 = Start” condition will start the drive. The Start command acts as a momentary Start command. A “1” will start the drive, but returning to “0” will not stop the drive.

(2) This Start will not function if a digital input (parameters 361-366) is programmed for 2-Wire Control (option 7, 8 or 9).

(3) This Reference Select will not function if a digital input (parameters 361-366) is programmed for “Speed Sel 1, 2 or 3” (option 15, 16 or 17). When using the Logic Command Word for the speed reference selection, always set Bit 12, 13 or 14. Note that Reference Selection is “Exclusive Ownership” see [Reference Owner] on page 3-49.

Figure A.2 Logic Status Word

Output Devices

For information on output devices such as output contactors, cable terminators and output reactors refer to the *PowerFlex Reference Manual*, publication PFLEX-RM001….

Drive, Fuse & Circuit Breaker Ratings

The tables on the following pages provide drive ratings (including continuous, 1 minute and 3 second) and recommended AC line input fuse and circuit breaker information. Both types of short circuit protection are acceptable for UL and IEC requirements. Sizes listed are the recommended sizes based on 40 degree C and the U.S. N.E.C. Other country, state or local codes may require different ratings.

Fusing

If fuses are chosen as the desired protection method, refer to the recommended types listed below. If available amp ratings do not match the tables provided, the closest fuse rating that exceeds the drive rating should be chosen.

- IEC – BS88 (British Standard) Parts 1 & 2 [1], EN60269-1, Parts 1 & 2, type gG or equivalent should be used.
- UL – UL Class CC, T, RK1 or J must be used.

Circuit Breakers

The “non-fuse” listings in the following tables include both circuit breakers (inverse time or instantaneous trip) and 140M Self-Protecting Motor Starters. **If one of these is chosen as the desired protection method**, the following requirements apply.

- IEC and UL – Both types of devices are acceptable for IEC and UL installations.

[1] Typical designations include, but may not be limited to the following; Parts 1 & 2: AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH.

(1) For IP 66 (NEMA Type 4X/12) enclosures, drives listed as Frame A increase to Frame B and drives listed as Frame C increase to Frame D.

(2) Minimum protection device size is the lowest rated device that supplies maximum protection without nuisance tripping.

(3) Maximum protection device size is the highest rated device that supplies drive protection. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.

(4) Circuit Breaker - inverse time breaker. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.

(5) Maximum allowable rating by US NEC. Exact size must be chosen for each installation.

(6) Motor Circuit Protector - instantaneous trip circuit breaker. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.

(7) Bulletin 140M with adjustable current range should have the current trip set to the minimum range that the device will not trip.

(8) Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 208 Wye or Delta, 240 Wye or Delta, 480Y/277 or 600Y/347. Not UL listed for use on 480V or 600V Delta/Delta systems.

(9) The AIC ratings of the Bulletin 140M Motor Protector may vary. See publication 140M-SG001B-EN-P.

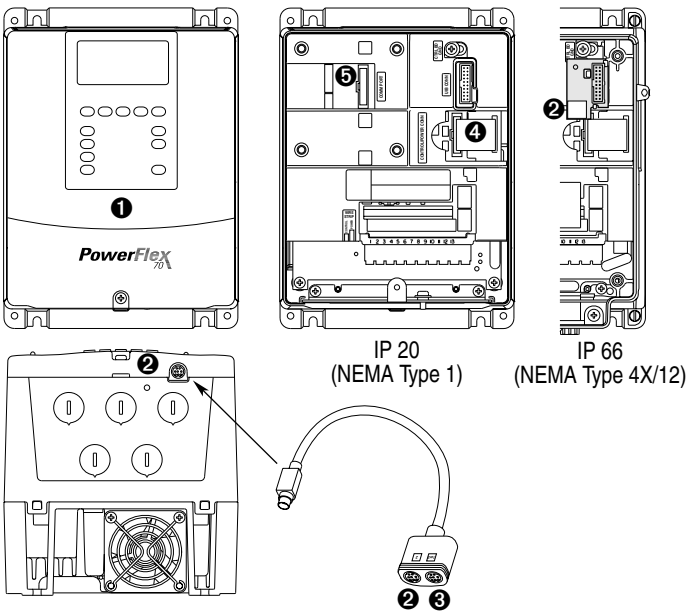
Notes:

HIM Overview

For information on…	See page	For information on…	See page
External and Internal Connections	B-1	Menu Structure	B-3
LCD Display Elements	B-2	Viewing and Editing Parameters	B-5
ALT Functions	B-2	Removing the HIM	B-2

External and Internal Connections

The PowerFlex 70 provides a number of cable connection points (B Frame shown).



No.	Connector	Description
1	DPI Port 1	HIM connection when installed in cover.
2	DPI Port 2	Cable connection for handheld and remote options.
3	DPI Port 3	Splitter cable connected to DPI Port 2 provides additional port.
4	Control / Power Connection	Connection between control and power boards.
5	DPI Port 5	Cable connection for communications adapter.

LCD Display Elements

Display	Description
	Direction | Drive Status | Alarm | Auto/Man | Information Commanded or Output Frequency Programming / Monitoring / Troubleshooting

ALT Functions

To use an ALT function, press the ALT key, release it, then press the programming key associated with one of the following functions:

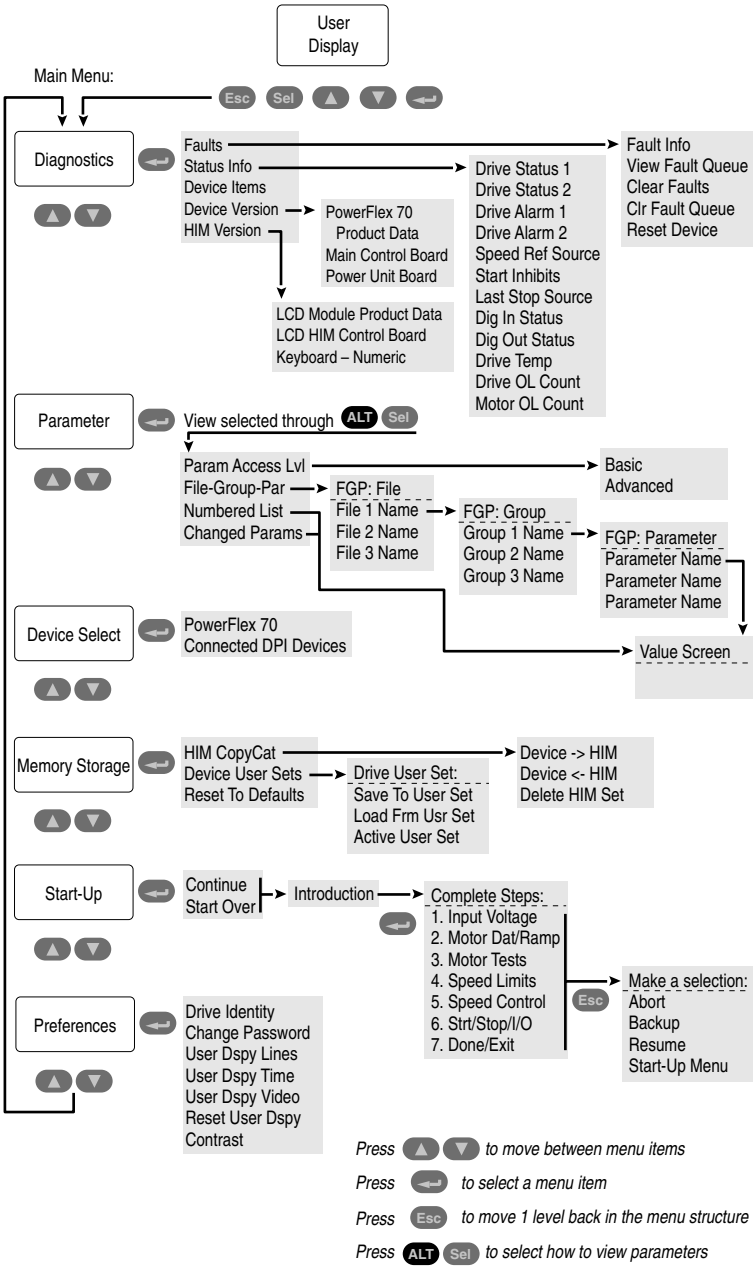
ALT Key and then ...			Performs this function ...	HIM Type
ALT	Esc	S.M.A.R.T.	Displays the S.M.A.R.T. screen.	LCD only
	Esc	Log In/Out	Log in to change parameter settings. Log out to protect parameter settings. Change a password.	LED only
	Sel	View	Allows the selection of how parameters will be viewed or detailed information about a parameter or component.	LCD only
	Sel	Device	Select a connected adapter for editing.	LED only
	▲	Lang	Displays the language selection screen.	LCD only
	▼	Auto / Man	Switches between Auto and Manual Modes.	LCD and LED
	↵	Remove	Allows HIM removal without causing a fault if the HIM is not the last controlling device and does not have Manual control of the drive.	LCD and LED
	.	Exp	Allows value to be entered as an exponent. (Not available on PowerFlex 70.)	LCD only
	+/–	Param #	Allows entry of a parameter number for viewing/ editing.	LCD only

Removing the HIM

The HIM can be removed while the drive is powered. Normally, the drive issues a fault when the HIM is removed because it detects that a device is missing.

Important: HIM removal is only permissible in Auto mode. If the HIM is removed while in Manual mode or the HIM is the only remaining control device, a fault will occur.

Menu Structure



Diagnostics Menu

When a fault trips the drive, use this menu to access detailed data about the drive.

Option	Description
Faults	View fault queue or fault information, clear faults or reset drive.
Status Info	View parameters that display status information about the drive.
Device Version	View the firmware version and hardware series of components.
HIM Version	View the firmware version and hardware series of the HIM.

Parameter Menu

Refer to Viewing and Editing Parameters on page B-5.

Device Select Menu

Use this menu to access parameters in connected peripheral devices.

Memory Storage Menu

Drive data can be saved to, or recalled from, User and HIM sets.
User sets are files stored in permanent nonvolatile drive memory.
HIM sets are files stored in permanent nonvolatile HIM memory.

Option	Description
HIM Copycat Device -> HIM Device <- HIM	Save data to a HIM set, load data from a HIM set to active drive memory or delete a HIM set.
Device User Sets	Save data to a User set, load data from a User set to active drive memory or name a User set.
Reset To Defaults	Restore the drive to its factory-default settings.

Start Up Menu

See Chapter 2.

Preferences Menu

The HIM and drive have features that you can customize.

Option	Description
Drive Identity	Add text to identify the drive.
Change Password	Enable/disable or modify the password.
User Dspy Lines	Select the display, parameter, scale and text for the User Display. The User Display is two lines of user-defined data that appears when the HIM is not being used for programming.
User Dspy Time	Set the wait time for the User Display or enable/disable it.
User Dspy Video	Select Reverse or Normal video for the Frequency and User Display lines.
Reset User Dspy	Return all the options for the User Display to factory default values.

Viewing and Editing Parameters

The PowerFlex 70 drive is initially set to Basic Parameter View. To view all parameters, set parameter 196 [Param Access Lvl] to option 1 "Advanced". Parameter 196 is not affected by the Reset to Defaults function.

LCD HIM

Step	Key(s)	Example Displays
1. In the Main Menu, press the Up Arrow or Down Arrow to scroll to "Parameter."		
2. Press Enter. "FGP File" appears on the top line and the first three files appear below it.		3. Press the Up Arrow or Down Arrow to scroll through the files.		
4. Press Enter to select a file. The groups in the file are displayed under it.		5. Repeat steps 3 and 4 to select a group and then a parameter. The parameter value screen will appear.		6. Press Enter to edit the parameter.		
7. Press the Up Arrow or Down Arrow to change the value. If desired, press Sel to move from digit to digit, letter to letter, or bit to bit. The digit or bit that you can change will be highlighted.		8. Press Enter to save the value. If you want to cancel a change, press Esc.		
9. Press the Up Arrow or Down Arrow to scroll through the parameters in the group, or press Esc to return to the group list.		
Numeric Keypad Shortcut

If using a HIM with a numeric keypad, press the ALT key and the +/– key to access the parameter by typing its number.

LED HIM - Standard Control Only

Step	Key(s)	Example Displays
1. Press Esc until the Output Frequency screen appears. This screen displays the frequency of the drive if it is running. If the drive is stopped, it will display 0.	Esc	
2. Press Enter. The parameter that was last viewed appears. Its file letter will flash.	Enter	3. Press the Up Arrow or Down Arrow to scroll through the files.	Up or Down	
4. Press Enter to enter a file. The right digit will then flash.	Enter	
5. Press the Up Arrow or Down Arrow to scroll through the parameters that are in the file. An "n" appears after a number if a parameter is a bit parameter that is divided into nibbles.	Up or Down	
6. Press Enter to view the value of a parameter or nibble. Its value will be displayed. If you do not want to edit the value, press Esc to return to the parameter list.	Enter	7. Press Enter to enter edit mode. The right digit will flash if it can be edited.	Enter	
8. Press the Up Arrow or Down Arrow to change the value. If desired, press Sel to move from digit to digit or bit to bit. The digit or bit that you can change will flash. To change a sign in a signed value, press Sel to move the cursor to the left-most digit. Then, press the Up Arrow or Down Arrow to scroll to the desired sign.	Up or Down Sel	
9. Press Enter to save the value. If you want to cancel a change, press Esc. The value will stop flashing to indicate that you are no longer in edit mode.	Enter	
10. Press Esc to return to the parameter list.	Esc

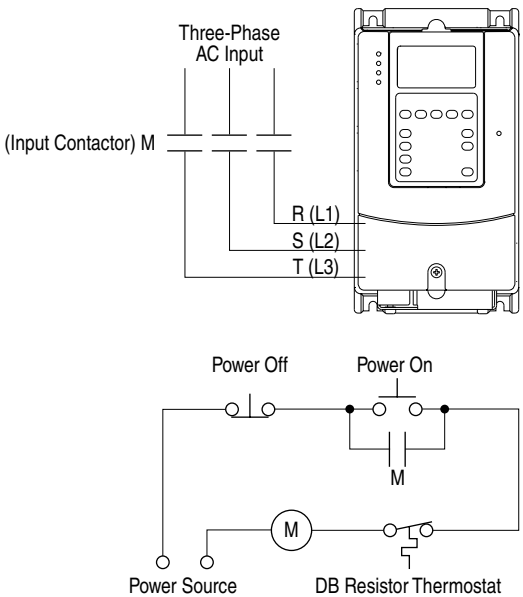
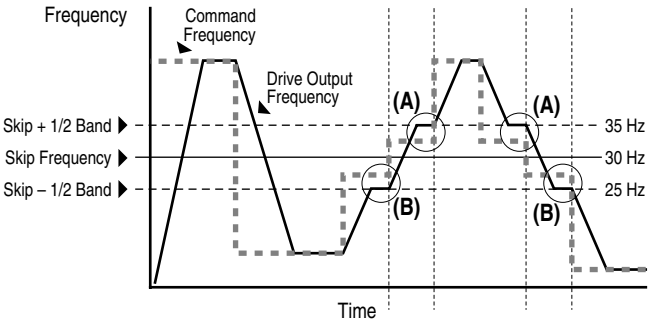
External Brake Resistor

Figure C.1 External Brake Resistor Circuitry



Skip Frequency

Figure C.2 Skip Frequency



Some machinery may have a resonant operating frequency that must be avoided to minimize the risk of equipment damage. To assure that the motor cannot continuously operate at one or more of the points, skip frequencies are used. Parameters 084-086, ([Skip Frequency 1-3]) are available to set the frequencies to be avoided.

The value programmed into the skip frequency parameters sets the center point for an entire “skip band” of frequencies. The width of the band (range of frequency around the center point) is determined by parameter 87, [Skip Freq Band]. The range is split, half above and half below the skip frequency parameter.

If the commanded frequency of the drive is greater than or equal to the skip (center) frequency and less than or equal to the high value of the band (skip plus 1/2 band), the drive will set the output frequency to the high value of the band. See (A) in Figure C.2.

If the commanded frequency is less than the skip (center) frequency and greater than or equal to the low value of the band (skip minus 1/2 band), the drive will set the output frequency to the low value of the band. See (B) in Figure C.2.

Acceleration and deceleration are not affected by the skip frequencies. Normal accel/decel will proceed through the band once the commanded frequency is greater than the skip frequency. See (A) & (B) in Figure C.2. This function affects only continuous operation within the band.

Skip Frequency Examples	
The skip frequency will have hysteresis so the output does not toggle between high and low values. Three distinct bands can be programmed. If none of the skip bands touch or overlap, each band has its own high/low limit.	If skip bands overlap or touch, the center frequency is recalculated based on the highest and lowest band values.	If a skip band(s) extend beyond the max frequency limits, the highest band value will be clamped at the max frequency limit. The center frequency is recalculated based on the highest and lowest band values.	If the band is outside the limits, the skip band is inactive.	
Stop Mode

Mode	Description
Coast to Stop	 This method releases the motor and allows the load to stop by friction. 1. On Stop, the drive output goes immediately to zero (off). 2. No further power is supplied to the motor. The drive has released control. 3. The motor will coast for a time that is dependent on the mechanics of the system (inertia, friction, etc).
Brake to Stop	 This method uses DC injection of the motor to Stop and/or hold the load. 1. On Stop, 3 phase drive output goes to zero (off) 2. Drive outputs DC voltage on the last used phase at the level programmed in [DC Brake Level] Par 158. This voltage causes a “stopping” brake torque. If the voltage is applied for a time that is longer than the actual possible stopping time, the remaining time will be used to attempt to hold the motor at zero speed. 3. DC voltage to the motor continues for the amount of time programmed in [DC Brake Time] Par 159. Braking ceases after this time expires. 4. After the DC Braking ceases, no further power is supplied to the motor. The motor may or may not be stopped. The drive has released control. 5. The motor, if rotating, will coast from its present speed for a time that is dependent on the mechanics of the system (inertia, friction, etc).

Mode	Description
Ramp to Stop	 This method uses drive output reduction to stop the load. 1. On Stop, drive output will decrease according to the programmed pattern from its present value to zero. The pattern may be linear or squared. The output will decrease to zero at the rate determined by the programmed [Maximum Freq] and the programmed active [Decel Time x] 2. The reduction in output can be limited by other drive factors such as bus or current regulation. 3. When the output reaches zero the output is shut off. 4. The motor, if rotating, will coast from its present speed for a time that is dependent on the mechanics of the system (inertia, friction, etc).
Ramp to Hold	 This method combines two of the methods above. It uses drive output reduction to stop the load and DC injection to hold the load at zero speed once it has stopped. 1. On Stop, drive output will decrease according to the programmed pattern from its present value to zero. The pattern may be linear or squared. The output will decrease to zero at the rate determined by the programmed [Maximum Freq] and the programmed active [Decel Time x] 2. The reduction in output can be limited by other drive factors such as bus or current regulation. 3. When the output reaches zero 3 phase drive output goes to zero (off) and the drive outputs DC voltage on the last used phase at the level programmed in [DC Brake Level] Par 158. This voltage causes a “holding” brake torque. 4. DC voltage to the motor continues until a Start command is reissued or the drive is disabled. 5. If a Start command is reissued, DC Braking ceases and the drive returns to normal AC operation. If an Enable command is removed, the drive enters a “not ready” state until the enable is restored.

Mode	Description
Fast Brake	 This method uses drive output reduction to stop the load. 1. On Stop, the drive output will decrease according to the programmed pattern from its present value to zero at the rate determined by the programmed active [Decel Time x]. This is accomplished by lowering the output frequency below the motor speed where regeneration will not occur. This causes excess energy to be lost in the motor. 2. The reduction in output can be limited by other drive factors such as bus or current regulation. 3. When the output reaches very near zero, DC brake will automatically be used to complete the stop then the output is shut off.

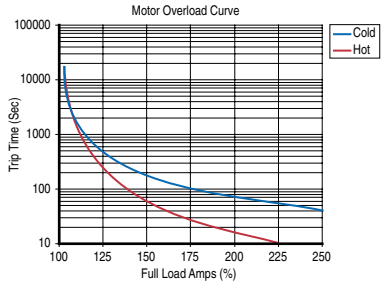
Motor Overload

For single motor applications the drive can be programmed to protect the motor from overload conditions. An electronic thermal overload I^2T function emulates a thermal overload relay. This operation is based on three parameters; [Motor NP FLA], [Motor OL Factor] and [Motor OL Hertz] (parameters 042, 048 and 047, respectively).

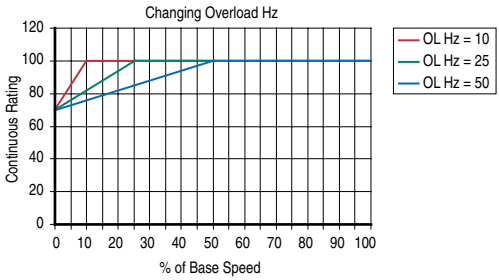
[Motor NP FLA] is multiplied by [Motor OL Factor] to allow the user to define the continuous level of current allowed by the motor thermal overload. [Motor OL Hertz] is used to allow the user to adjust the frequency below which the motor overload is derated.

The motor can operate up to 102% of FLA continuously. If the drive had just been activated, it will run at 150% of FLA for 180 seconds. If the motor had been operating at 100% for over 30 minutes, the drive will run at 150% of FLA for 60 seconds. These values assume the drive is operating above [Motor OL Hertz], and that [Motor OL Factor] is set to 1.00.

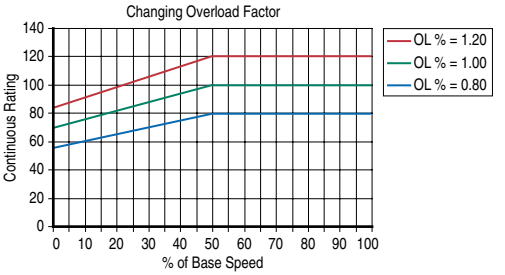
Operation below 100% current causes the temperature calculation to account for motor cooling.



[Motor OL Hertz] defines the frequency where motor overload capacity derate should begin. The motor overload capacity is reduced when operating below [Motor OL Hertz]. For all settings of [Motor OL Hertz] other than zero, the overload capacity is reduced to 70% at an output frequency of zero.



[Motor NP FLA] is multiplied by [Motor OL Factor] to select the rated current for the motor thermal overload. This can be used to raise or lower the level of current that will cause the motor thermal overload to trip. The effective overload factor is a combination of [Motor OL Hertz] and [Motor OL Factor].



Motor Overload Memory Retention Per 2005 NEC

The PowerFlex 70 EC (Firmware Revision 3.002 or greater) has the ability to retain the motor overload count at power down per the 2005 NEC motor overtemp requirement. A parameter has been added to provide this functionality. To Enable/Disable this feature, refer to the information below.

File B	Group	No.	Parameter Name and Description *See page 3-2 for symbol descriptions*	Values	Related
MOTOR CONTROL (File B)	Motor Data	050	E C v3 **[Motor OL Mode]** If "0," [Drive OL Count], P219 is reset to zero by a drive reset or a power cycle. If "1," the value is maintained. A "1" to "0" transition resets [Drive OL Count] to zero. Start At PowerUp

When Start At Powerup in 2 wire control is configured, the drive will start if all start permissive conditions are met (within 10 seconds of drive power being applied), and the terminal block start input (Run, Run Forward or Run Reverse for 2-wire) is closed. An alarm will be annunciated from application of power until the drive actually starts, indicating the powerup start attempt is in progress.

The powerup start attempt will be aborted if any of the following occurs anytime during the 10-second start interval:

- A fault condition occurs
- A Type 2 alarm condition occurs
- The terminal block programmed enable input is opened
- All terminal block run, run forward, or run reverse, inputs are canceled
- A Stop request (from any source) is received

If the drive has not started within the 10 second interval, the powerup start attempt will be terminated.

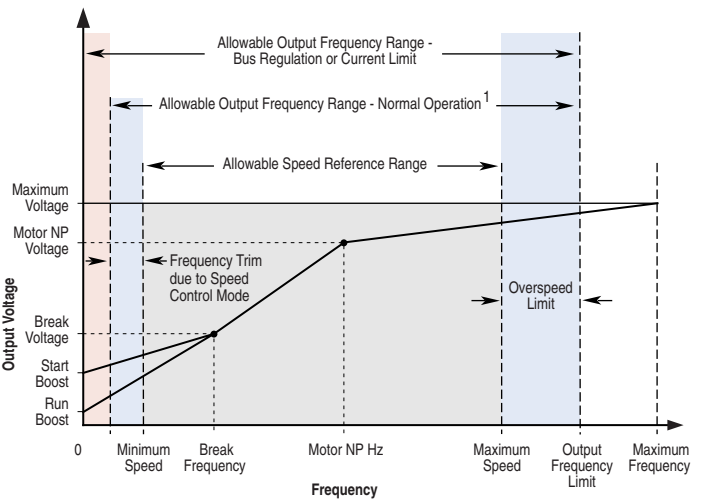
Overspeed

Overspeed Limit is a user programmable value that allows operation at maximum speed, but also provides an “overspeed band” that will allow a speed regulator such as encoder feedback or slip compensation to increase the output frequency above maximum speed in order to maintain maximum motor speed.

The figure below illustrates a typical Custom V/Hz profile. Minimum Speed is entered in Hertz and determines the lower speed reference limit during normal operation. Maximum Speed is entered in Hertz and determines the upper speed reference limit. The two “Speed” parameters only limit the speed reference and not the output frequency.

The actual output frequency at maximum speed reference is the sum of the speed reference plus “speed adder” components from functions such as slip compensation.

The Overspeed Limit is entered in Hertz and added to Maximum Speed and the sum of the two (Speed Limit) limit the output frequency. This sum (Speed Limit) must is compared to Maximum Frequency and an alarm is initiated which prevents operation if the Speed Limit exceeds Maximum Frequency.



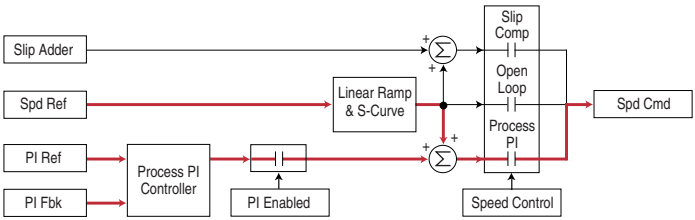
Note 1: The lower limit on this range can be 0 depending on the value of Speed Adder

Process PI for Standard Control

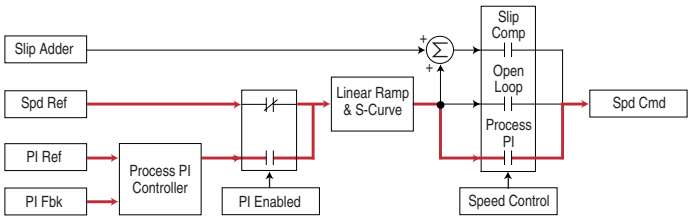
The internal PI function of the PowerFlex 70 provides closed loop process control with proportional and integral control action. The function is designed for use in applications that require simple control of a process without external control devices. The PI function allows the microprocessor of the drive to follow a single process control loop.

The PI function reads a process variable input to the drive and compares it to a desired setpoint stored in the drive. The algorithm will then adjust the output of the PI regulator, changing drive output frequency to try and make the process variable equal the setpoint.

It can operate as trim mode by summing the PI loop output with a master speed reference.

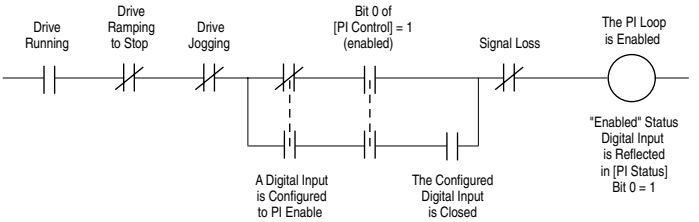


Or, it can operate as control mode by supplying the entire speed reference. This method is identified as “exclusive mode”



PI Enable

The output of the PI loop can be turned on (enabled) or turned off (disabled). This control allows the user to determine when the PI loop is providing part or all of the commanded speed. The logic for enabling the PI loop is shown in below.



The drive must be running for the PI loop to be enabled. The loop will be disabled when the drive is ramping to a stop, jogging or the signal loss protection for the analog input(s) is sensing a loss of signal.

If a digital input has been configured to “PI Enable,” two events are required to enable the loop: the digital input must be closed AND bit 0 of the PI Control parameter must be = 1.

If no digital input is configured to “PI Enable,” then only the Bit 0 = 1 condition must be met. If the bit is permanently set to a “1”, then the loop will become enabled as soon as the drive goes into “run”.

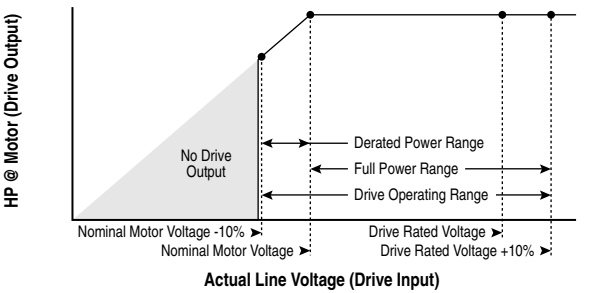
Voltage Tolerance

Drive Rating	Nominal Line Voltage	Nominal Motor Voltage	Drive Full Power Range	Drive Operating Range
200-240	200	200†	200-264	180-264
	208	208	208-264	
	240	230	230-264	
380-400	380	380†	380-528	342-528
	400	400	400-528	
	480	460	460-528	
500-600	600	575†	575-660	432-660

Drive Full Power Range =	Nominal Motor Voltage to Drive Rated Voltage + 10%. Rated current is available across the entire Drive Full Power Range
Drive Operating Range =	Lowest† Nominal Motor Voltage - 10% to Drive Rated Voltage + 10%. Drive Output is linearly derated when Actual Line Voltage is less than the Nominal Motor Voltage



Example:

Calculate the maximum power of a 5 HP, 460V motor connected to a 480V rated drive supplied with 342V Actual Line Voltage input.

- Actual Line Voltage / Nominal Motor Voltage = 74.3%
- 74.3% × 5 HP = 3.7 HP
- 74.3% × 60 Hz = 44.6 Hz

At 342V Actual Line Voltage, the maximum power the 5 HP, 460V motor can produce is 3.7 HP at 44.6 Hz.

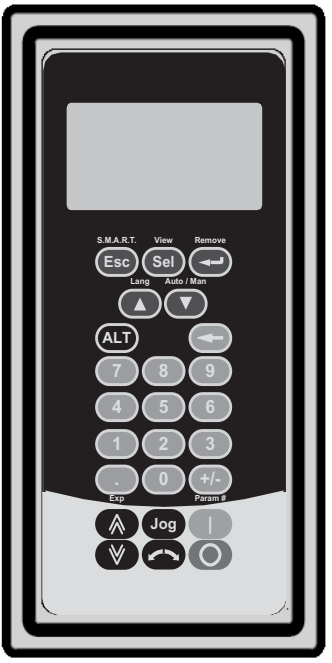
20-HIM-C3S



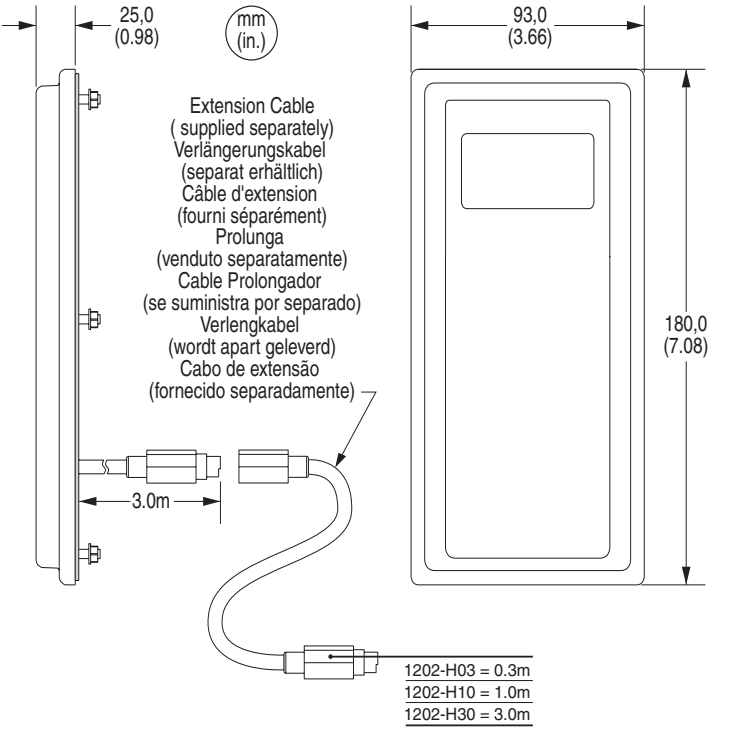
20-HIM-C5S

IP66 (NEMA Type 4X/12)
Indoor / Innenraum / Usage Intérieur / Interno / Interior / Indoor / Interno

Important: Adhesive coated gasket designed for one time installation.
Wichtig: Dichtung ist nur für den einmaligen Einbau anwendbar.
Important : Joint adhésif à usage unique.
Importante: Guarnizione adesiva valida per una sola installazione. Smontando e rimontando la stessa non sara' piu' garantita la protezione IP66.
ATENCIÓN: Junta con capa adhesiva diseñada para solo una fijación– no reutilizable.
Belangrijk: De zelfklevende dichtingsring is voor éénmalig gebruik.
Importante: Vedação adesiva foi projetada para ser instalada uma vez.

Dimensions
Abmessungen
Dimensions
Dimensioni

Dimensiones
Afmetingen
Dimensões



Note: The 20-HIM-C3S and 20-HIM-C5S are respectively smaller than the 20-HIM-C3 and 20-HIM-C5, and cannot be used as a direct field replacement.

Hinweis: Die 20-HIM-C3S und die 20-HIM-C5S sind jeweils kleiner als die 20-HIM-C3 und 20-HIM-C5 und können nicht direkt vor Ort ausgewechselt werden.

Remaque : Les 20-HIM-C3S et 20-HIM-C5S sont respectivement plus petites que les 20-HIM-C3 et 20-HIM-C5 et ne peuvent pas être utilisées directement comme pièces de rechange.

Nota: I modelli 20-HIM-C3S e 20-HIM-C5S sono di dimensioni inferiori ai modelli 20-HIM-C3 e 20-HIM-C5 e non possono sostituire i dispositivi applicati direttamente su campo.

Nota: Los módulos 20-HIM-C3S y 20-HIM-C5S son más compactos que los modelos 20-HIM-C3 y 20-HIM-C5 respectivamente, y no se los puede utilizar como reemplazo directo en el campo.

Opmerking: De 20-HIM-C3S en 20-HIM-C5S zijn kleiner dan resp. de 20-HIM-C3 en 20-HIM-C5 en kunnen niet als directe vervanging in het veld worden gebruikt.

Nota: A 20-HIM-C3S e 20-HIM-C5S são, respectivamente, menores do que a 20-HIM-C3 e a 20-HIM-C5 e não podem ser usadas como substitutas diretas no campo.

General Purpose Relays

Accessories

	Description	Pkg. Qty.	Cat. No.
Cat. No. 700-HN100	**Screw Terminal Tube Base Socket — Panel or DIN Rail Mounting; Guarded Terminal Construction.** 8-Pin for use with DPDT Bulletin 700-HA Relays, -HX Timing Relays, -HT (On-Delay) and -HRM, -HRC and -HV (Repeat Cycle) Timing Relays. Order ten or multiples of ten	10	700-HN100
Cat. No. 700-HN125	**Screw Terminal Tube Base Socket — Panel or DIN Rail Mounting; Open Style Construction.** 8-Pin for use with DPDT Bulletin 700-HA Relays, -HT (On-Delay) and -HRM, -HRC and -HV (Repeat Cycle) Timing Relays. Order must be for 10 sockets or multiples of 10. No retainer clip required.	10	700-HN125
Cat. No. 700-HN101	**Screw Terminal Tube Base Sockets — Panel or DIN Rail Mounting. Guarded Terminal Construction** 11-pin for use with 3PDT Bulletin 700-HA relays, -HR and -HT (Off-Delay) timing relays. Order must be for 10 sockets or multiples of 10.	10	700-HN101
Cat. No. 700-HN126	**Screw Terminal Tube Base Sockets — Panel or DIN Rail Mounting. Open Style Terminal Construction** 11-pin for use with 3PDT Bulletin 700-HA relays, -HR and -HT (Off-Delay) timing relays. Order must be for 10 sockets or multiples of 10.	10	700-HN126
Cat. No. 700-HN205	**8-Pin Socket — Can Be Used With or Without Timing Attachment or Surge Suppressor** Screw Terminal Tube Base Sockets — panel or DIN Rail mounting. Guarded terminal construction. Used with DPDT Bulletin 700-HA Relays. Order must be for 10 sockets or multiples of 10.	10	700-HN204
	11-Pin Socket — Can Be Used With or Without Timing Attachment or Surge Suppressor Screw Terminal Tube Base Sockets — panel or DIN Rail mounting. Guarded terminal construction. Used with 3PDT Bulletin 700-HA relays. Order must be for 10 sockets or multiples of 10.	10	700-HN205
Cat. No. 199-DR1	**DIN (#3) Symmetrical Rail** 35 mm x 7.5 mm x 1 m long Zinc-plated, yellow chromated	10	199-DR1

	Description	Pkg. Qty.	Cat. No.
	Diode Surge Suppressor∗ Voltage Range: 6…220V DC used with 700-HN204 and 700-HN205 socket	10	700-ADR
	Diode with LED Surge Suppressor∗ Voltage Range: 6…24V DC used with 700-HN204 and 700-HN205 socket	10	700-ADL1R
	Diode with LED Surge Suppressor∗ Voltage Range: 28…60V DC used with 700-HN204 and 700-HN205 socket	10	700-ADL2R
	Diode with LED Surge Suppressor∗ Voltage Range: 110…220V DC used with 700-HN204 and 700-HN205 socket	10	700-ADL3R
	Varistor with LED Surge Suppressor∗ Voltage Range: 6…24V AC used with 700-HN204 and 700-HN205 socket	10	700-AV1R
	Varistor with LED Surge Suppressor∗ Voltage Range: 110…240V AC used with 700-HN204 and 700-HN205 socket	10	700-AV3R
	RC Surge Suppressor∗ Voltage Range: 6…24V AC/DC used with 700-HN204 and 700-HN205 socket	10	700-AR1
	RC Surge Suppressor∗ Voltage Range: 110…240V AC/DC used with 700-HN204 and 700-HN205 socket	10	700-AR2
	**On-Delay Time Module**∗ Voltage Range: 12…24V AC/DC used with 700-HN204 and 700-HN205 socket 	1	700-AT1
Cat. No. 700-AT2	**One Shot Timing Module**∗ Voltage Range: 12…24V AC/DC used with 700-HN204 and 700-HN205 socket 	1	700-AT2
	**Multi-Function Multi-Range Time Module**∗ Voltage range 12…240V AC 50/60 Hz and 12…240V DC, with a voltage variation of 85…110%. Repeat accuracy of ±1%. Reset time <50 ms. Refer to page 9-23 for Specifications.	1	700-HT3
	Eight (8) Timing Modes Eight (7) Timing Ranges: 1. 1 s — 0.05 s…1 s 2. 10 s — 0.5 s…10 s 3. 100 s — 5 s…100 s 4. 10 min — 0.5 min…10 min 5. 100 min — 5 min…100 min 6. 10 hours — 0.5 h…10 h 7. 100 hours — 5 h…100 h 		
Cat. No. 700-HT3	LED Indicator		

∗ Suppressors and Time Modules easily plug into sockets (Cat. Nos. 700-HN204 and 700-HN205). For use with Bulletin 700-HA relays.

ATTENTION: Cat. No. 700-HT3 is wired with signal “S” connected to “A1”. See wiring diagram marked on the timer module.

General Purpose Relays

Accessories, Continued

	Description	Pkg. Qty.	Cat. No.
 *Sample Retainer Clips*	**Retainer Clip for Cat. Nos. 700-HN100, -HN101, -HN200, -HN201, -HN204, and -HN205 Sockets with Bulletin 700-HA Relays**∗ Secures relay in socket. Order must be for 10 clips or multiples of 10.	10	700-HN157
 *Snap-in markers*	**Relay Identification Snap-in Markers**‡ Snap-in markers fit on top of Bulletin 700-HA relay covers. The following are blank cards. Squares slip into molded slot on top of Bulletin 700-HA or 700-HB relay cover.	100	1492-MS5X12 1492-MS6X9 1492-MS6X12 1492-MS8X9 1492-MS8X12 1492-MP-Blank
	**Pre-printed identification tags —** contains 10 sheets of pre-printed and blank tags. Each sheet contains 13 sets of the markings CR…9CR, TR…9TR, M…9M, F, R, 1S, and 117 blank tags. Tags are peel-off with sticky backing for easy placement on relays.	10	700-N40
	Blank identification tags — contains 10 sheets of blank identification tags for customer specialized printing. Each sheet contains 546 blank tags. Tags are peel-off with sticky backing for easy placement on relays.	10	700-N41

∗ See Bulletin 700-HA Relay, Socket, and Retainer Clip Reference Chart below.
‡ For pre-printed marker cards, turn to the following 1492 sections: 1492-SM5X12_, 1492-SM6X9_,1492-SM8X9_,1492-SM8X12_,1492-MP_

Relay Type	Socket	Retainer Clip
700-HA32 700-HAB2 700-HAX2	700-HN100 700-HN125 700-HN204 700-HN200	700-HN157 Not Required§ 700-HN157 700-HN157
700-HA33 700-HAB3 700-HAX3	700-HN201 700-HN101 700-HN126 700-HN205	700-HN157 700-HN157 Not Required§ 700-HN157

§ Design of these sockets holds the relays securely and does not require retainer clips.

† At constant voltage and temperature.

Timing Charts, Cat. No. 700-HT3 Multi-Function Time Module (t = Time Range 0.05 s...100 h)

Cat. No. 700-HT3 Timing Modes, Time Description, Timing Charts, and DIP Switch Selections

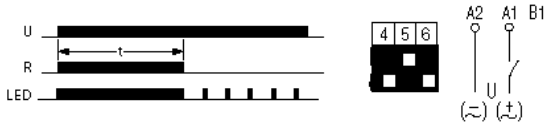
Terms:
U is Power Input
R is Relay Output
S Signal, **+A1** Socket, **B1** Timer
t is the resulting Time Delay (Red LED)

1. Power On-Delay

Apply power (U) to timer. Relay contacts (R) change state after time delay (t) is complete. Contacts return to their shelf state when power is removed. Terminal B1 is not used in this mode.

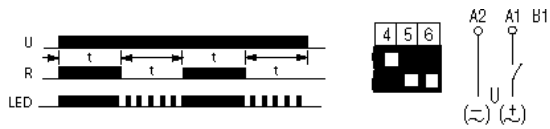
2. Power On One-Shot

Apply power (U) to timer. Relay contacts (R) change state immediately and the time delay begins. When the time delay (t) is complete, contacts return to their shelf state. Contacts return to their shelf state when power is removed. Terminal B1 is not used in this mode.



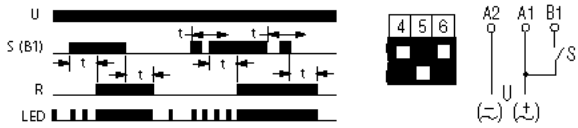
3. Power On Repeat Cycle, On Start

Apply power (U) to timer. Relay contacts (R) change state immediately and the time delay (t) begins. When the time delay is complete, the contacts return to their shelf state for time delay (t) (time on = time off). This cycle will repeat until the power is removed. Terminal B1 is not used in this mode.



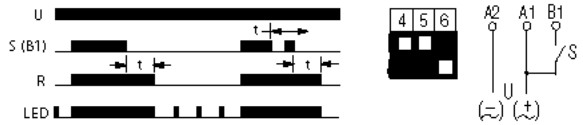
4. Signal On-Delay and Signal Off-Delay

Apply power (U) to timer. When the signal (S) is closed the time delay (t) begins, after the time delay is complete the relay contacts (R) change state. Opening the signal starts the time delay, after the time delay is complete the contacts return to their shelf state. If the signal is closed or opened before the time delay is complete, the time delay is reset. Contacts return to their shelf state when power is removed.



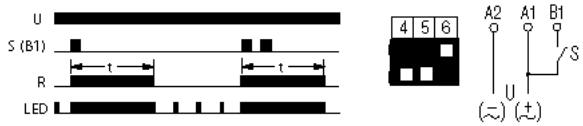
5. Signal Off-Delay

Apply power (U) to timer. When the signal (S) is closed, the relay contacts (R) change state immediately. When the signal is opened, the time delay (t) begins. If the signal is closed before the time delay is complete, the time delay is reset and the relay remains energized. When the time delay is complete, the contacts return to their shelf state. Contacts return to their shelf state when power is removed.



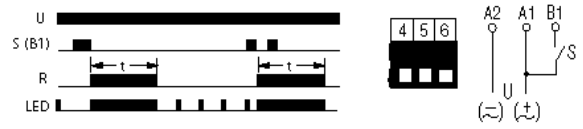
6. Signal On One-Shot

Apply power (U) to timer. When the signal (S) is closed, the relay contacts (R) change state immediately and the time delay (t) begins. After the time delay begins, opening or closing the signal will not reset the time delay. When the time delay is complete, the contacts return to their shelf state. Contacts return to their shelf state when power is removed.



7. Signal Off One-Shot

Apply power (U) to timer. When the signal (S) is closed and then opened, the relay contacts (R) change state immediately and the time delay (t) begins. After the time delay begins, opening or closing the signal will not reset the time delay. When the time delay is complete, the contacts return to their shelf state. Contacts return to their shelf state when power is removed.



8. Signal On and Signal Off Watchdog Monitor

Apply power (U) to timer. When the signal (S) is closed, the relay contacts (R) energize immediately and the time delay (t) begins. If the signal is opened before the time delay is complete, the relay remains energized and the time delay is reset. When the time delay is complete the contacts return to their shelf state. If the signal is opened after the time delay is complete, the relay contacts energize immediately and the same time delay begins. Continuous cycling of the signal at a rate that is faster than the time delay will cause the relay contacts to remain energized. Contacts return to their shelf state when power is removed.

Interposing/Isolation Relays

Overview/Product Selection

Bulletin 700-HL "Terminal Block Relay"

- Relay and Socket Assembled Interface Modules For High Density Interposing or Isolation Applications
- Screw Terminal and Spring Clamp Bases
- 6 A Relay, Choice of Silver or Gold Contacts
- 2 A Solid-State Relay
- SPDT (Relay), 1 N.O. (Solid-State)
- Built-in Retainer Clip and Snap-in Marker Lever
- Standard LED, Reverse Polarity Protection, and Surge Protection
- Externally Replaceable Relay Modules
- Unique Leakage Current Suppression Version to Address Industry Concerns of Nuisance Coil Turn-on or Contact Non-Drop Out when Connecting to PLCs with Leakage Current

* Reverse polarity on the output terminals of the solid-state relay will result in the output being "On" regardless of the state of the input voltage.
† Electromechanical relay to solid-state relay interchangeability is possible.
‡ For Gold-plated contacts: Add the letter "X" at the end of the catalog number. For example: if Cat. No. 700-HLT1Z24 is required with gold plating, the new cat. no. is 700-HLT1Z24X.
§ Leakage current suppression up to 2.2 mA off state current.

	Description	Pkg. Quantity	Socket Input Voltage	Cat. No.
 *Cat. No. 700-TBR24*	**Replacement Relays** Order must be for 20 relays or multiples of 20.	20	12V	700-TBR12∗
			24V	700-TBR24∗
			48V	700-TBR48∗
			110/125V 220…240V 120V…125V 240V	700-TBR60∗
Cat. No. 700-TBS24	**Replacement SSR** 4-blade miniature relay for use with 1 N.O. SSR output. Order must be for 20 relays or multiples of 20.	20	24V	700-TBS24
			48V 110/125V 220…240V 120V…125V 240V 120/125V	700-TBS60
Cat. No. 700-TBJ20B	**20-Way Jumper** Can be cut to required length. *Ith* =36 A max per 20-way jumper.	1	Color	
			Red	700-TBJ20R
			Gray	700-TBJ20G
			Blue	700-TBJ20B
Cat. No. 700HN177	**End Barrier** Used for visual inspection of groups, safe separation of neighboring 700-HL modules that end with jumpers. Order must be for 10 or multiples of 10.	10	Black	700-HN177
	**Snap-in Marker** These snap-in markers have a 6 x 10 mm surface and snap into the ejection lever for the relay.	100	Blank	1492-MC6X10
			Standard 1492-MC6X10	www.ab.com/catalogs for information
			Custom	†

∗ For gold-plated contacts: Add the letter "X" at the end of the catalog number. For example: if Cat. No. 700-TBR24 is required with gold plating, the new cat. no. is 700-TBR24X. Also add $1 (US) to the price per relay.

† Go to http://www.ab.com/software/termblock/index.html and download software. Create custom text, save file, and e-mail to your local Allen-Bradley distributor.

Note: Terminal block relay bases are not sold separately.

Interposing/Isolation Relays

Specifications✶

Cat. No. 700-HLT… (Relay Output)							
Electrical Ratings							
Pilot Duty Rating	6 A NEMA B 300, R 300						
Rated Thermal Current (I_{th})	1-Pole — 6 A

DIN Rail Timing Relays

Specifications, Continued

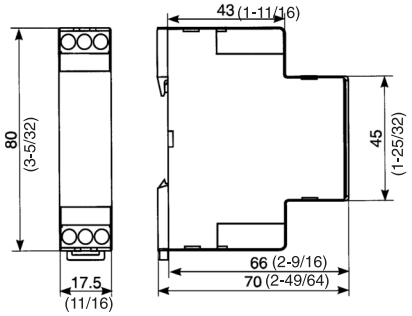
General Specifications

	1 N.O.	SPDT
Insulation Characteristics	2 kV AC/50 Hz test voltage according to VDE 0435 and 4 kV 1.2/50 µs surge voltage according to IEC 947-1 between all inputs and outputs	
EMC/Interference Immunity	The following requirements are fulfilled: Surge capacity of the supply voltage according to IEC 1000-4-5: Level 3 (A1-A2) 110...240V AC according to IEC 1000-4-5: Level 2 (A3-A2) 24V AC/DC* Burst according to IEC 1000-4-4: Level 3 ESD discharge according to IEC 1000-4-2: Level 3	The following requirements are fulfilled: Surge capacity of the supply voltage according to IEC 1000-4-5: Level 3 Burst according to IEC 1000-4-4: Level 3 ESD discharge according to IEC 1000-4-2: Level 3
EMC/Emmission	electromagnetical fields according to EN 55 022: Class B	
Safe Isolation	according to VDE 106, Part 101	
Climatic Withstand	56 cycles (24 h) at 25…40 °C and 95% relative humidity according to IEC 68-2-30 and IEC 68-2-3	
Vibration Resistance	4 g in 3 axes at 10…500 Hz, test FC according to IEC 68-2-6	
Shock Resistance	50 g according to IEC 68-2-27	
Protection Class IEC 947-1	Enclosure:IP 40 Terminal:IP 20	
Weight	60 g	60 g
Certifications	cULus, CE Certified	cULus, Germanischer Lloyd, CE Certified
Ambient Temperature	Open:–25…+60 °C Enclosed:–25…+45 °C Storage:–40…+85 °C	
Connections	Screw terminal M3 for Pozidriv No.1, Philips and slotted screws No.2. suitable for power screw-driver. Rated tightening torque 8.8 lb.-in. (max. 1.0 Nm) For terminal cross-sections of 1 x 0.5 mm²…2 x 1.5 mm² (solid) or 2 x 1.5 mm² (stranded with sleeve), #20…14 AWG. Finger protection according to VDE 0106	
Mounting	For surface mounting in any position; snap-on mounting on 35 mm DIN Rail or by adapter and 2 screws (M4 type)	
Disposal	Synthetic materials without dioxin according to EC/EFTA-Notification No. 93/0141/D electrical contacts are AgCdO	

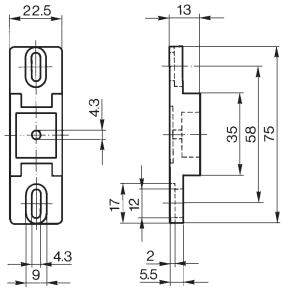
* Voltage is either 24V DC or AC 50/60 Hz.

Approximate Dimensions

Approximate Dimensions are shown in millimeters (inches). Approximate Dimensions are not intended to be used for manufacturing purposes.



Cat. No. 700-FE...



Cat. No. 199-FSA...

Bulletin 700-FS

- Adjustable Function and Timing Range Timing Relays
- DIN Rail Mounted without Cost of Socket
- 22.5 mm Wide Multifunction or Single Functions
- Available as SPDT or DPDT Contact Output, 8 A
- Timing Ranges From 0.05s…60h

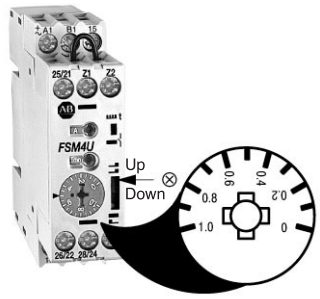
		0.05 s…1 min.		700-FSY2EU23
		0.15…3 min.		700-FSY2FU23
		0.5…10 min.		700-FSY2GU23

∗ The time range of “0.05 s…60 h” is selectable in 12 smaller ranges plus an ON and OFF function for maintenance needs.
† This time range is selectable in four smaller ranges: 0.15 s…2.5 s, 0.5 s…10 s, 4 s…80 s, 30 s…10 min.
‡ Due to shock during shipment, the state of the contacts should be verified before initial use.

Multi-Function Timing Relay Function and Time Range Settings

Description	SPDT	DPDT
	Multi-Time Setting Range 0.05 s…60 h	

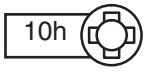


Multi-function timing relays 700-FSM3U includes 10 setting functions:

(A)On-Delay
(B)Off-Delay
(C)On- and Off-Delay
(D)One shot
(E)Fleeting Off-Delay
(F)Flasher (repeat cycle starts with pulse)
(I)On-Delay pulse generator
(L)Pulse converter
(On)ON-Function§
(Off)OFF-Function§

Note: Switch ⊗ is on DPDT relays only. When switch is down, one contact is instantaneous and one is timed. When switch is up, both contacts are timed.

(1 s)0.05…1 s
(3 s)0.15…3 s
(10 s)0.5…10 s
(1 min)0.05…1 min
(3 min)0.15…3 min
(10 min)0.5…10 min
(1 h)0.05…1 h
(3 h)0.15…3 h
(10 h)0.5…10 h
(60 h)3….60 h



§ For installation and maintenance.

	Description	Pkg. Quantity	Cat. No.
	Setting Knob with Scale (for time setting without tools)	10	700-FSK
	Panel Mounting Adapter For surface mounting according to drilling plan EN 50 002	5	199-FSA
	Label Sheet 10 sheets with 105 self-adhesive paper labels each, 6 x 17 mm	10	100-FMS
	Marking Tag Sheet 10 sheets with 160 perforated paper labels each, 6 x 17 mm To be used with a transparent cover	10	100-FMP
	Transparent Cover 100 each To be used with marking tag sheets	100	100-FMC
	Marking Tag Adapters 100 each To be used with marking tag:	100	100-FMA2*

* Cat. No. 100-FMA2 is only a marking tag carrier. Please refer to the Terminal Block Accessories section for appropriate marker cards to be used with this carrier.

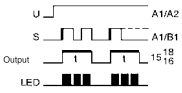
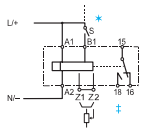
(L) Pulse Converter (Min. Pulse AC 50 ms…DC 30 ms)





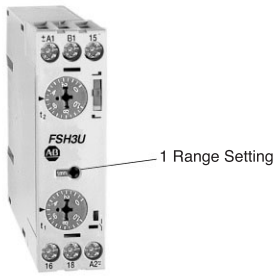
Cleverly Designed Function Display LED (Green)

- Output in rest position, no timing
- Output in rest position, time running
- Output in operation position, no timing
- Output in operation position, time running

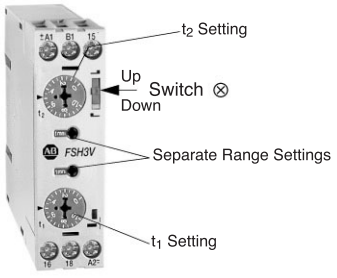
∗ A voltage other than the supply voltage can be used at B1, but must be within voltages specified on timer.
† Output 2 is selectable as instantaneous contact with sliding switch (⊗) on front panel (instantaneous when switch is down, timed when switch is up).
‡ Available on multifunction “M,” and single function “A” or “B” option timing relays along with code “4” (2PDT contacts). Bridge or potentiometer 10 kΩ, min. 0.25 W (low voltage) for external time setting. Set timer dial to 0.0.

Special Function Flasher (Repeat Cycle Starting with Pulse or Pause) Timing Relays

Description



700-FSH3U



700-FSH3V

Supply Voltages (A1/A2)

Z12 12V DC

U23 24…48V DC,

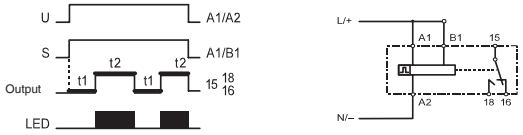
24…240V AC, 50/60 Hz

Function Diagram / Connection Diagram

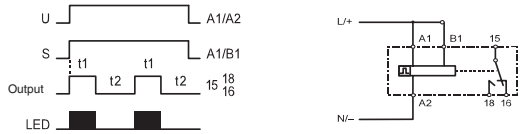
(H) Flasher (Repeat Cycle Starting with Pulse or Pause)
The repeat cycle timer permits different settings for on and off times.
The following operating modes are possible:

- Oscillating mode; repeat cycle starts with voltage applied at A1 and B1, and continues to repeat until voltage is off.
- One cycle mode; started by energizing B1 with voltage on A1 and A2.
- Output starts with pulse or pause (switch ⊗ Up or Down).
- 700-FSH3U provides (1) range setting for t_1 and t_2.
  700-FSH3V provides (2) range settings for t_1 and t_2.

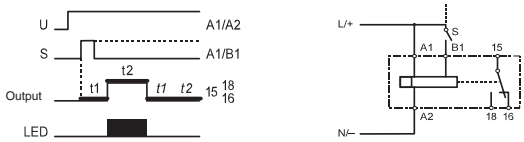
Supply Voltage Controlled, Oscillating Mode Starting with Pause — Switch ⊗ is Up



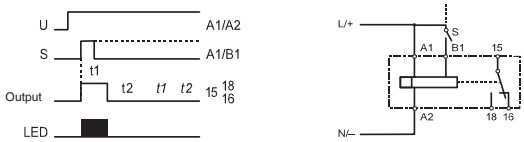
Supply Voltage Controlled, Oscillating Mode Starting with Pulse — Switch ⊗ is Down



Pulse Controlled, Output Starts With Pause (Min. Pulse AC 50 ms — DC 30 ms) — Switch ⊗ is Up One Cycle Mode — Voltage Supplied at A1 and A2, then Pulsing "s" to Energize B1 will Initiate One Cycle.



Pulse Controlled, Output Starts with Pulse (Min. Pulse AC 50 ms — DC 30 ms) — Switch ⊗ is Down One Cycle Mode — Voltage Supplied at A1 and A2, then Pulsing "s" to Energize B1 will Initiate One Cycle.



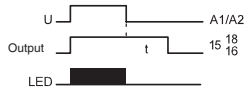
Note: If B1 is pulsed, a one full time cycle consisting of t_1 and t_2 is completed.

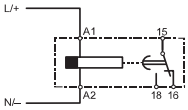
LED Operation Chart Green LED

LED ———	Output at Shelf State, No Timing – LED Off
LED _ _ _ _	Output at Shelf State, Time is Running – LED Flashing
LED ▬▬▬	Output NO Contact is Closed, No Timing – LED On
LED ▬ ▬ ▬	Output NO Contact is Closed, Time is Running – LED Long Flashing

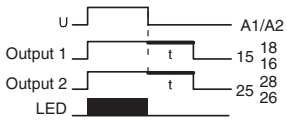
Function Diagram / Connection Diagram

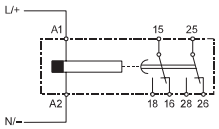
(Q) Off-Delay without Supply Voltage (True Off-Delay) — When input power is turned on, the output contact changes state. When the power is removed, the time delay begins. The output contact returns to shelf state at the end of the time delay.



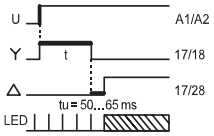


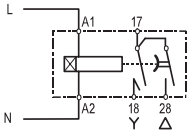
Note: Min. pulse (t) required:
24V DC: 200 ms
24V AC: 325 ms
240V DC: 200 ms
240V AC: 175 ms





(Y) Star-Delta Timing Relay — When power is applied, the output contact 17/18(Y) changes state. After the time setting, the output contact 17/18(Y) returns to shelf state. After the fixed time (50… 60 ms), the output contact 17/28Δ changes state. Both output contacts return to shelf state whenever the power is removed.





Time Characteristics (according to VDE 0435, Part 2021)

Setting Accuracy	±5% of full scale
Repeatability	±0.2% of the setting values
Tolerance	Voltage: ±0.001%/%ΔU Temperature: ±0.025%/°C

Supply

Supply Voltages	24…48V DC and 24…240V AC, 50/60 Hz (multi voltage)
Voltage Tolerance	–20…+20% (DC), –15…+10% (AC)
Power Consumption	0.5 W at 24V DC, 5 VA at 240V AC
Time Energized	100%
Reset Time	50 ms
Voltage Interruption	≤20 ms without reset (supply voltage)
Input Impedance	Relay ON: 3K-13K ohms Relay OFF: 0.7K-4K ohms
Cable Length (Supply Voltage Control)	Max. 250 m (800 ft)

Pulse Control (B1)

Pulse Duration	≥50 ms (AC), ≥30 ms (DC)
Input Voltage	Supply voltage range
Input Current	1 mA
Max. Leakage Current	400 micro Amps
Cable Length	Max. 250 m (800 ft) without parallel load between B1 and A2 Max. 50 m (160 ft) with load (<3 kΩ) between B1 and A2

Outputs

Contact Type	Relay as changeover switch
Dielectric Coil to Contact Withstand Voltage	5,000 V
Switching Capacity	Voltage: 440V AC
	Current Ith (AC-1): 8 A (5 A for 700-FSQ)
	Power: 2000 VA
	According to IEC 947-5-1:
	3 A/440V AC (inductive load, AC 14)
	3 A/250V AC (inductive load, AC 15)
	1 A/24V DC (inductive load, DC 13)
	According to UL 508:
	1.5 A/250V AC (B300)
	3 A/120V AC (B300)
Short-Circuit Resistance	10 A gL
Life	Mechanical: 30 million operations
	Electrical operations:
	4 Mil. at 1 A/250V AC, cos ϕ = 1
	0.2 Mil. at 6 A/250V AC, cos ϕ = 1
	1.5 Mil. at 1 A/250V AC, cos ϕ = 0.3
	0.3 Mil. at 3 A/250V AC, cos ϕ = 0.3
	0.5 Mil. at 6 A/24V DC, resistive
	2 Mil. at 4 A/24V DC, resistive
	2 Mil. at 0.2 A/230V DC, resistive
	1 Mil. at 0.4 A/24V DC, L/R = 20 ms
	1 Mil. at 0.2 A/110V DC, L/R = 20 ms
	1 Mil. at 0.1 A/230V DC, L/R = 20 ms
State Indicator	1 LED, combination signal

* Performance Data — See page important-2, publication A115.

General Data

Insulation Characteristics	2 kVAC/50 Hz test voltage according to VDE 0435 and 6 kV 1.2/50 µs surge voltage according to IEC 947-1 between all inputs and outputs
EMC/Interference Immunity	Performance of following requirements: Surge capacity of the supply voltage according to IEC 1000-4-5: 4 kV 1.2/50 µs Burst according to IEC 1000-4-4: 6 kV 6/50 ns ESD discharge according to IEC 1000-4-2: Contact 8 kV, air 8 kV Electromagnetic HF field according to IEC 801-3 and conducted electromagnetic HF signal according to IEC 801-6: Level 3
EMC/Emission	Electromagnetic fields according to EN 55 022: class B
Safe Isolation	According to VDE 106, part 101
Climatic Withstand	56 Cycles (24 h) at 25…40 °C and 95% relative humidity according to IEC 68-2-30 and IEC 68-2-3
Vibration Resistance	4 g in 3 axes at 10…500 Hz, test FC according to IEC 68-2-6
Shock Resistance	50 g according to IEC 68-2-27
Protection Class	Enclosure:IP 40 IP 30 (Single-function) Terminal:IP 20 according to IEC 947-1
Weight	100 g
Approval	UL, C-UL
Ambient Temperature	Open: –25…+60 °C Enclosed: –25…+45 °C Storage: –40…+85 °C
Terminals	Screw terminal M3.5 for Number 2 Posidrive, Philips, and slotted screws. Suitable for power screwdriver. Rated tightening torque 8.8 lb.-in. (0.8 N•m, max. 1.2 N•m). Dual-chamber system for terminal cross-sections of 1 x 0.5 mm^2…2 x 2.5 mm^2 (solid) or stranded 2 x 2.5 mm^2 (flexible with sleeve), #20…14 AWG. Finger protection according to VDE 0106.
Mounting	Front mounting; For snap-on mounting on 35 mm DIN Rail or screw fixing by adapter and 2 screws (M4 type)
Disposal	Synthetic material without dioxin according to EC/EFTA notification Number 93/0141/D electrical contacts with cadmium
Certifications	cUL Recognized, File E14840, cULus Listed, File E14840, Guide NKCR, CE Marked (per EU Low Voltage Directive 73/23 EEC 93/68 EEC: per Electromagnetic Compatibility Directive 89/336 EEC 92/31 EEC 93/681 EEC)
Standards	EN 60947-1, EN 60947-5-1, EN 50081-1, IEC 947, UL 508, CSA 22.2

* Performance Data — See page important-2, publication A115.

Ambient humidity		Operating:35%…85%		
Life expectancy		Mechanical:10,000,000 operations min. (under no load at 1,800 operations/h)		
		Electrical:4PDT: 200,000 operations min. (3 A at 250V AC, resistive load at 1,800 operations/h)		

* Single-phase, full-wave-rectified power supplies can be used.
† When using the 700-HNC continuously in any place where the ambient temperature is in a range of 45 °C…50 °C, supply 90%…110% of the rated supply voltages supply 95%…110% with 12V DC type).
‡ Set the reset voltage as follows to ensure proper resetting.
100…120V AC:10V AC max.
200…230V AC:20V AC max.
100…110V DC:10V DC max.

Characteristics, Continued	
Noise immunity	±1.5 kV, square-wave noise by noise simulator (pulse width: 100 ns/1 µs, 1-ns rise)
Static immunity	Destruction:8 kV Malfunction:4 kV
Enclosure rating	IP40
Weight	Approx. 50 g
EMC	Emission Enclosure:EN55011 Group 1 class A
	Emission AC Mains:EN55011 Group 1 class A
	Immunity ESD:EN61000-4-2:4 kV contact discharge (level 2) 8 kV air discharge (level 3)
	Immunity RF-interference:ENV50140:10 V/m (amplitude modulated, 80 MHz to 1 GHz) (level 3) 10 V/m (pulse modulated, 900 MHz)
	Immunity Conducted Disturbance:ENV50141:10 V (0.15…80 MHz) (level 3)
	Immunity Burst:EN61000-4-4:2 kV power-line (level 3) 2 kV I/O signal-line (level 4)
Standards	UL508, CSA 22.2 No. 14
	Conforms to VDE0435/P2021, VDE0110 (for in-panel use)
	Conforms to EN50081-2, EN50082-2

Multifunction and ON-Delay Timer

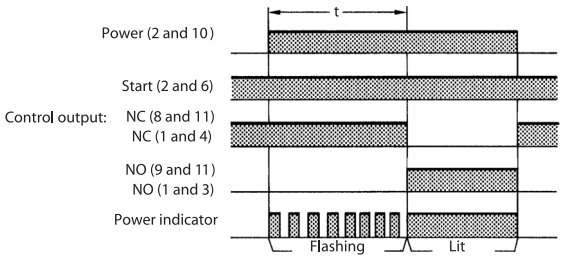
Application Examples

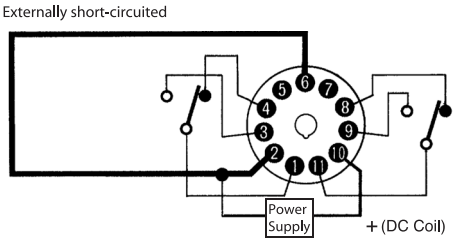
A Mode: Signal ON-Delay

On-delay operation (A mode) is a basic mode.

1. Power-ON Start/Power-OFF Reset*

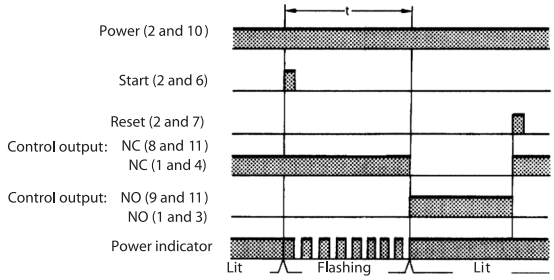
The Power-ON start/Power-OFF reset operation is a standard operating method.

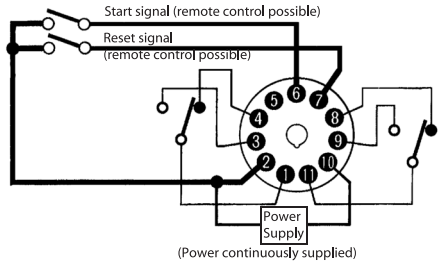




2. Signal Start/Signal Reset*

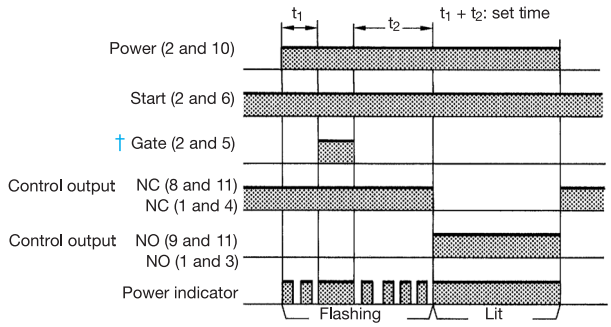
The Signal start/Signal reset operation is useful for remote control of the Timer.



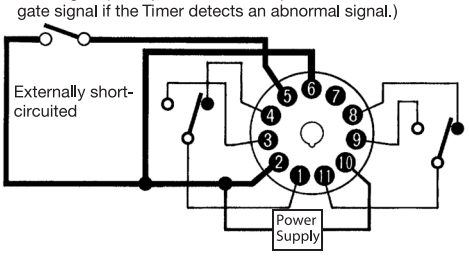


3. Control of Integrated Time with Gate Signal*

With a gate signal, the Power-ON start operation and Signal start operation can be controlled (the operation can be interrupted).



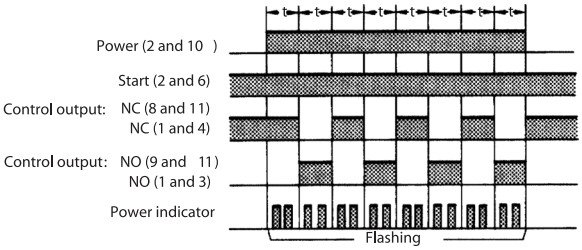
Gate signal (The operation is interrupted with the gate signal if the Timer detects an abnormal signal.)

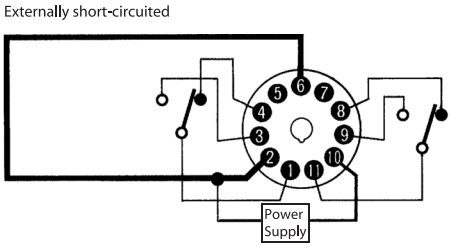


B/B2 Mode: Repeat Cycle

The Repeat Cycle operation in the B and B2 modes can be effectively applied to lamp or buzzer (ON and OFF) alarms or the monitoring of an intermittent operation with a display.

1. Power-ON Start/Power-OFF Reset (in B Mode)*



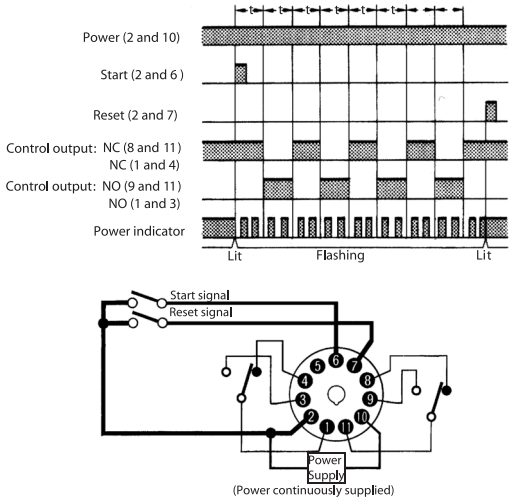


* If using a voltage input, connect pin 6 and 10 for DPDT devices.
† Gate Signal: A maintained connection is required to allow the timing sequence to complete.

Multifunction and On-Delay Timer, Continued

2. Signal Start/Signal Reset (in B Mode)*

If there is an abnormal signal, flashing starts. When the abnormal condition is restored, a reset signal stops the display flashing.

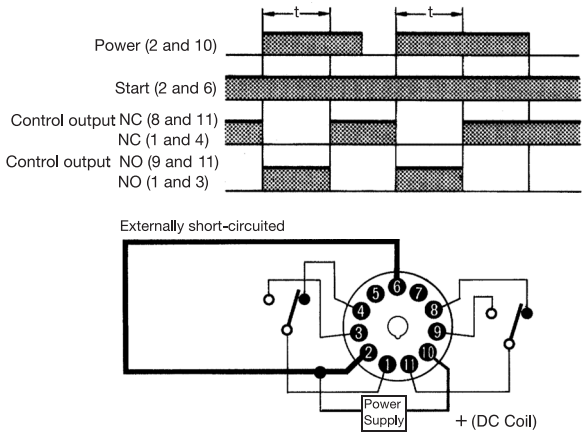


C Mode: Signal On/Off-Delay

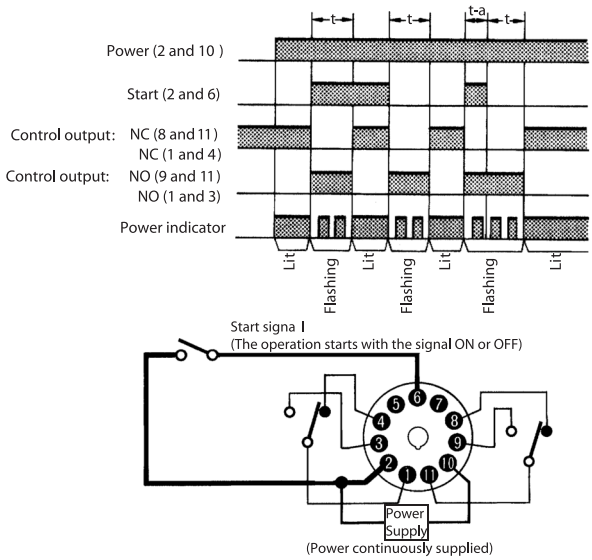
The Signal On-/Off-delay operation (C mode) is useful for the control of distribution of products on a production line into boxes by the specified number or time.

1. Power-ON Start/Instantaneous Operation/Time-Limit Reset*

A set of these functions is useful for the operation of a machine for a specified period when power is ON.



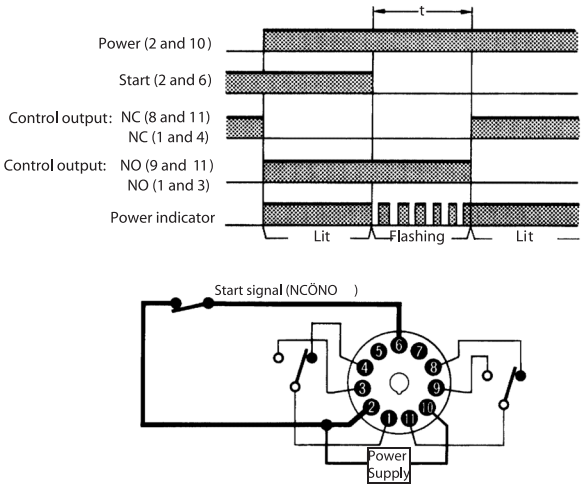
2. Signal-ON-OFF Start/Instantaneous Operation/Time-Limit Reset*



D Mode: Signal Off-Delay

Signal Off-delay operation (D mode) can be effectively used to keep a load operating for a certain period. For example, this function enables the cooling fan for a lamp or heater to operate for a certain period after the lamp or heater is switched OFF.

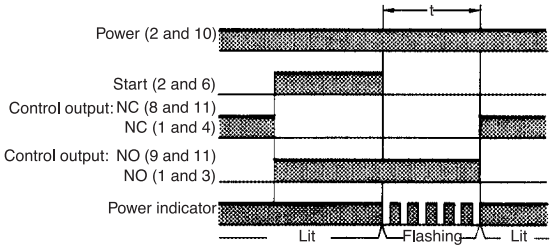
1. Power-ON Start/Instantaneous Operation/Time-Limit Reset*

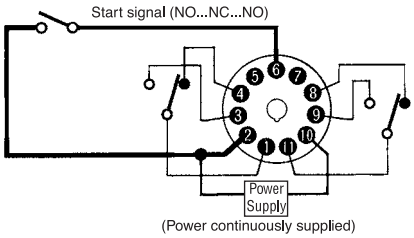


* If using a voltage input, connect pin 6 and 10 for DPDT devices.

Multifunction and On-Delay Timer, Continued

2. Signal Start/Instantaneous Operation/Time-Limit Reset

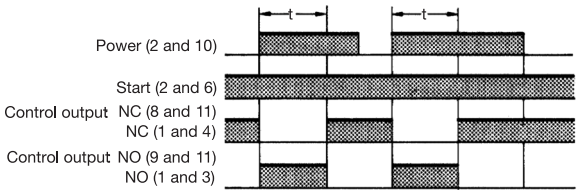


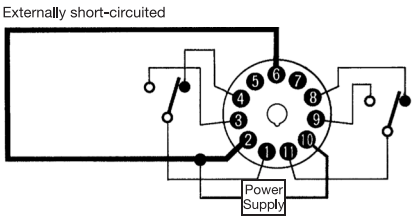


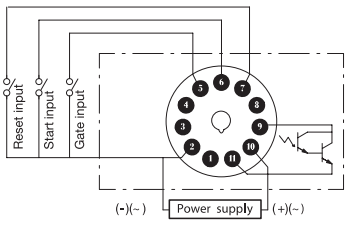
E Mode: One Shot

1. Power-ON Start/Instantaneous Operation/Time-Limit Reset

This function is useful for the operation of a machine for a specified period after power is ON.



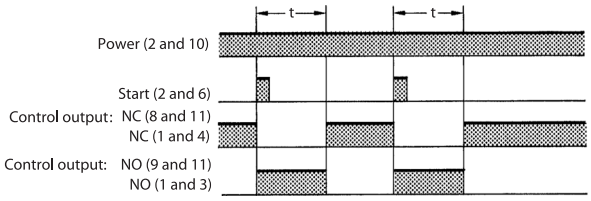


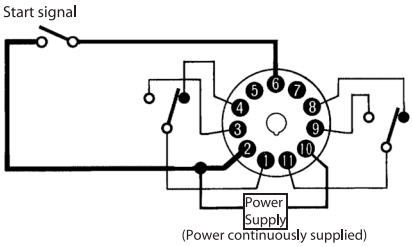


Note: Start input is valid and retriggerable while the timer is in operation.

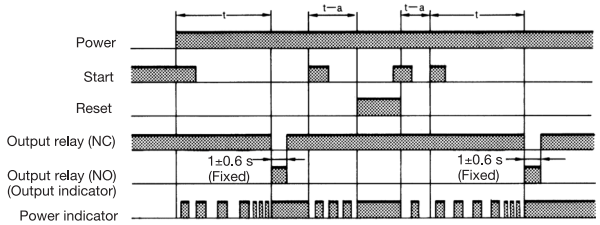
2. Signal Start/Instantaneous Operation/Time-Limit Reset

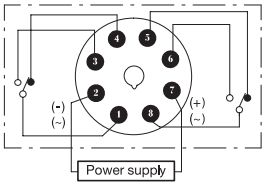
This function is useful for the repetitive control such as the filling of liquid for a specified period after each Signal start input.

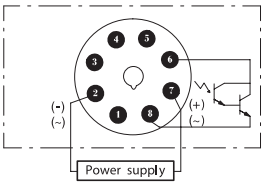


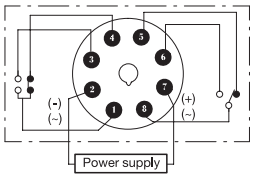


J Mode: On-Delay One Shot









Plug-in Timing Relays

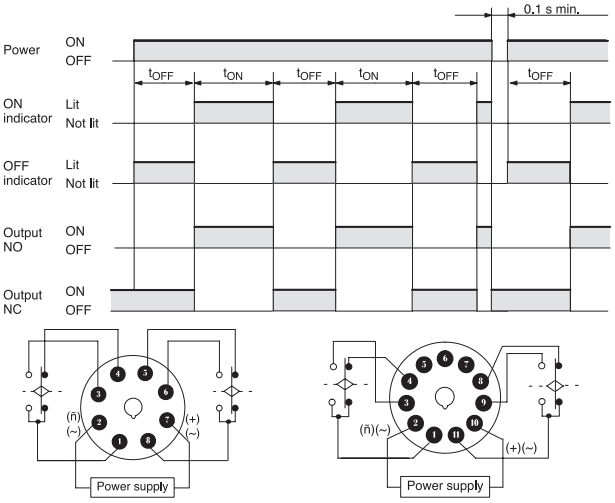
Bulletin 700-HR Timer Wiring Diagrams and Timing Charts, Continued

700-HRF Twin Timer, 700-HRY Star-Delta Timer, and 700-HRQ Off-Delay Timer

B Mode: Repeat Cycle Off-start (700-HRF)

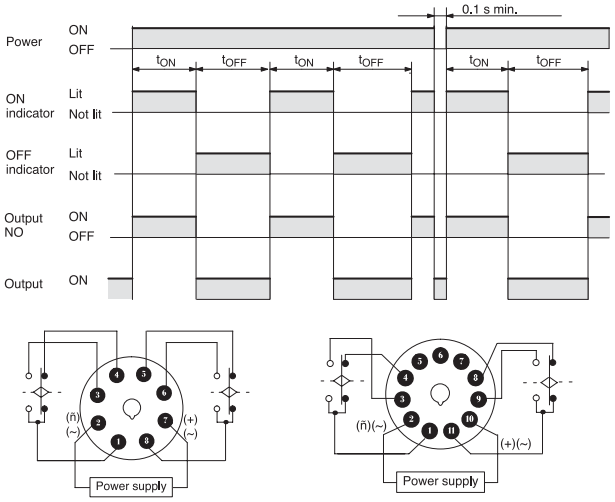
The Repeat Cycle operation in the B mode can be effectively applied to lamp or buzzer (ON and OFF) alarms or the monitoring of an intermittent operation with a display.

1. Power-ON Start/Power-OFF Reset (in B Mode)



B2 Mode: Repeat Cycle On-start (700-HRF)

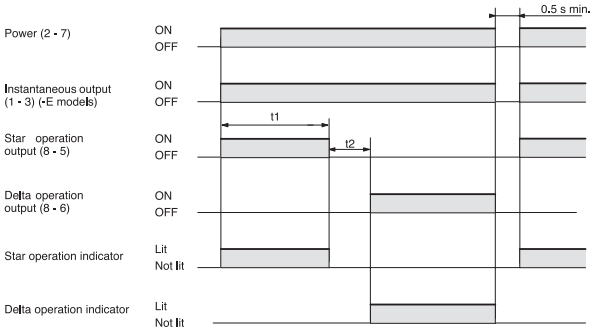
The Repeat Cycle operation in the B2 mode can be effectively applied to lamp or buzzer (ON and OFF) alarms or the monitoring of an intermittent operation with a display



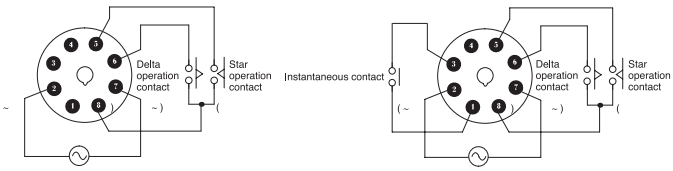
Star-Delta (700-HRY)

1. Power-ON Start/Instantaneous Operation/Time-Limit Reset

This function is useful for the operation of a machine for a specified period after power is ON.



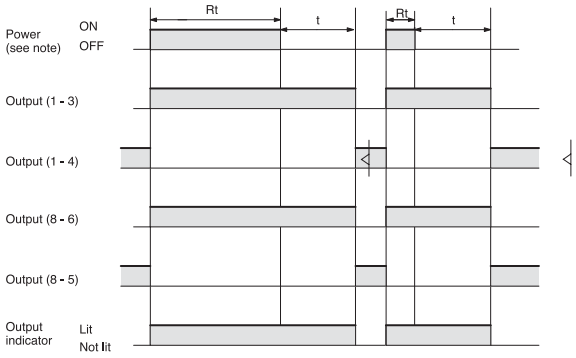
t1: Star operation time setting
t2: Star-delta transfer time



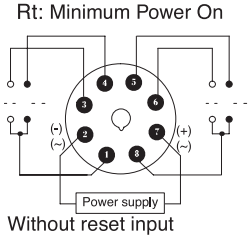
True OFF-Delay (700-HRQ)

Signal OFF-delay operation (D mode) can be effectively used to keep a load operating for a certain period. For example, this function enables the cooling fan for a lamp or heater to operate for a certain period after the lamp or heater is switched OFF.

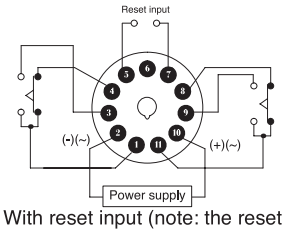
1. Power-ON Start/Instantaneous Operation/Time-Limit Reset



t: Set time
Rt: Minimum Power On



Without reset input



With reset input (note: the reset brings coil to shelf state)

Approximate Dimensions are shown in millimeters (inches). Approximate Dimensions are not intended to be used for manufacturing purposes.

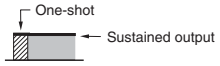
	Emission AC mains:	EN55011 Group1 class A
	(EMS)	EN61812-1
	Immunity ESD:	EN61000-4-2: 6 kV contact discharge (level2) 8 kV air discharge (level3)
	Immunity RF-interference:	EN61000-4-3: 10 V/m
Approved standards		UL508, CSA C22.2 No.14 Conforms to EN61812-1 (Pollution degree 2/overvoltage category III) Conforms to VDE0106/P 100 (Finger Protection), conforms to NEMA output rating (N/F)
Enclosure ratings		Panel surface:IP66 and NEMA Type 4X (indoors)†
Weight		Approx. 100 g
Certifications		CE Certified; UL508; CSA, C22.2 No. 14; ACA
Standards		EN61010-1; IEC61010-1; VDE0106/P 100; NEMA 4X/IP66

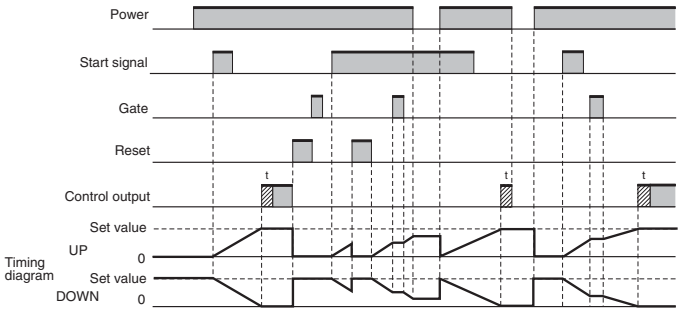
* 700-HX User Manual, pub. number 700-UM002A-EN-D, available at: the Automation Bookstore web site http://www.theautomationbookstore.com
† An attached waterproof packing is necessary to ensure IP66 waterproofing between the 700-HX and installation pan.

Timing Charts



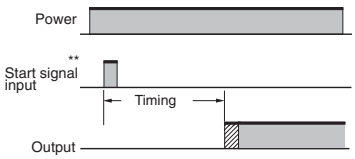
One-shot outputs can be to set to 0.1 s, 0.5 s, 1s, 5 s, 10 s, 20 s.

Output mode A Mode: Signal ON-Delay (Timer resets when power comes ON.)



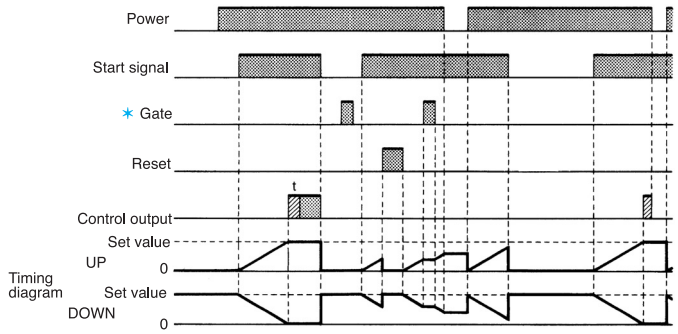
Timing starts when the start signal goes ON.
While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.
The control output is controlled using a sustained or one-shot rime period.

Basic Operation



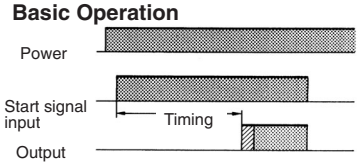
* Output is instantaneous when setting is 0.
** Start signal input is enabled during timing.

Output Mode A-1: Signal ON-Delay 2 (Timer resets when power comes ON.)



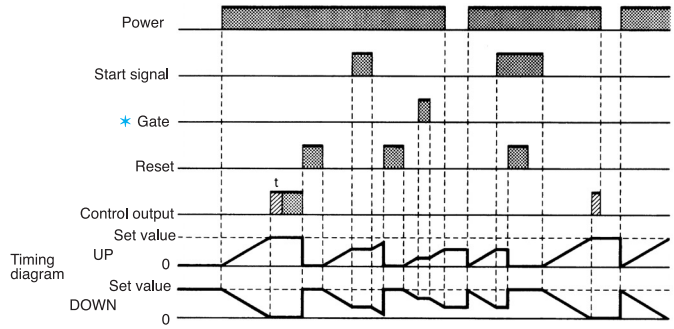
Timing starts when the start signal goes ON, and is reset when the start signal goes OFF.
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.
The control output is controlled using a sustained or one-shot time period.

Basic Operation



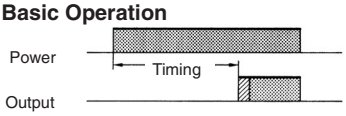
*Output is instantaneous when setting is 0.

Output mode A-2: Power ON Delay 1 (Timer resets when power comes ON)



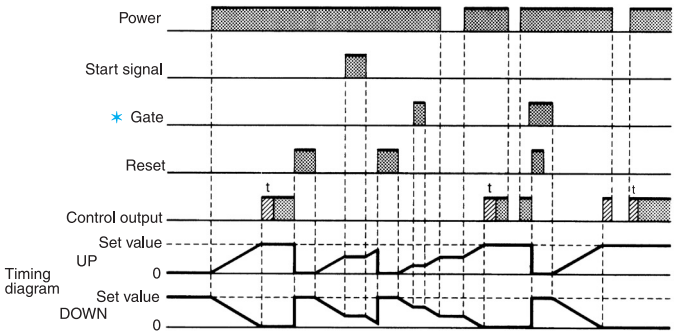
Timing starts when the reset input goes OFF.
The start signal disables the timing function (i.e., same function as the gate input).
The control output is controlled using a sustained or one-shot time period.

Basic Operation



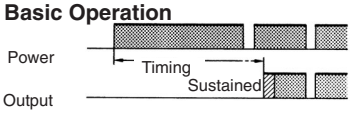
*Output is instantaneous when setting is 0.

Output mode A-3 Power ON Delay 2 (Timer does not reset when power comes ON)



Timing starts when the reset input goes OFF.
The start signal disables the timing function (i.e., same function as the gate input).
The control output is controlled using a sustained or one-shot time period.

Basic Operation

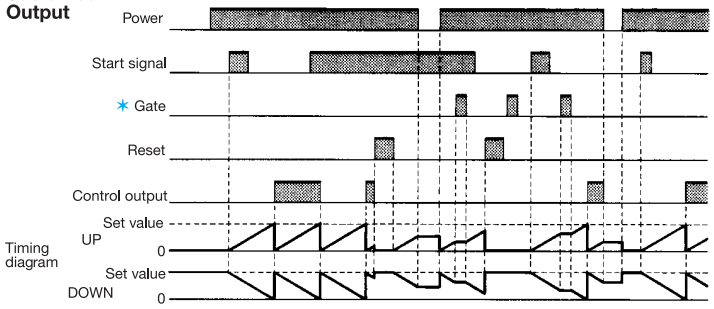


*Output is instantaneous when setting is 0.

✶ Gate not included on any mode of this relay.

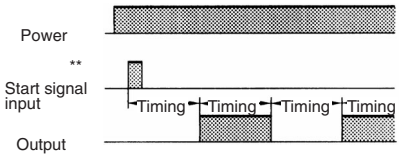
Output mode B: Repeat Cycle (Timer resets when power comes ON.)

Sustained Output



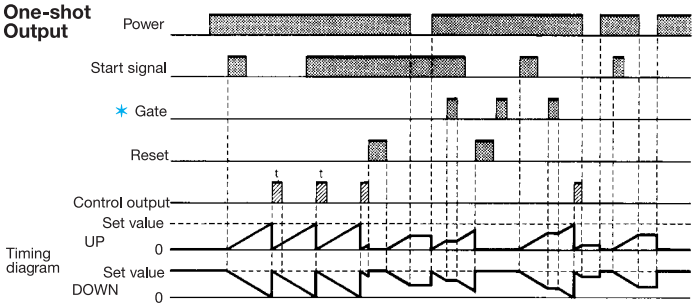
Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (OFF at start).
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation



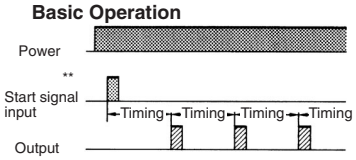
* Normal output operation will not be possible if the set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

One-shot Output



Timing starts when the start signal goes ON.
The control output is turned ON when time is up.
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

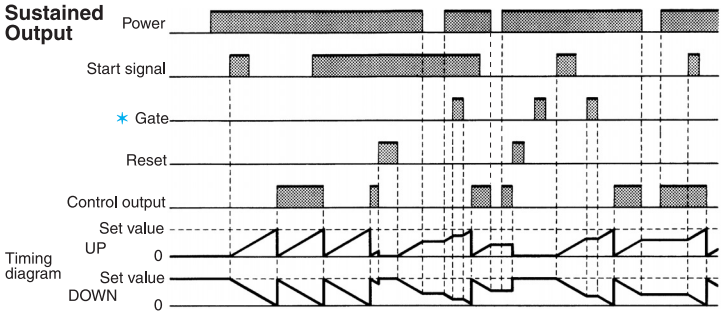
Basic Operation



* Normal output operation will not be possible if the set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

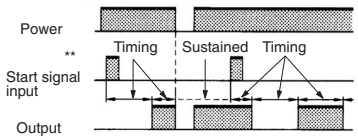
Output Mode B-1: Repeat Cycle 2 (Timer does not reset when power comes ON)

Sustained Output



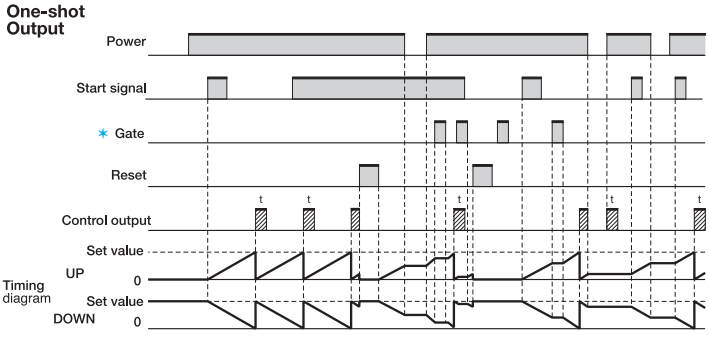
Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (OFF at start).
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation



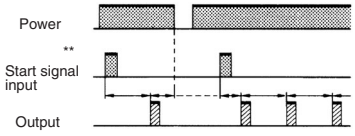
* Normal output operation will not be possible if the set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

One-shot Output



Timing starts when the start signal goes ON.
The control output comes ON when time is up..
While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

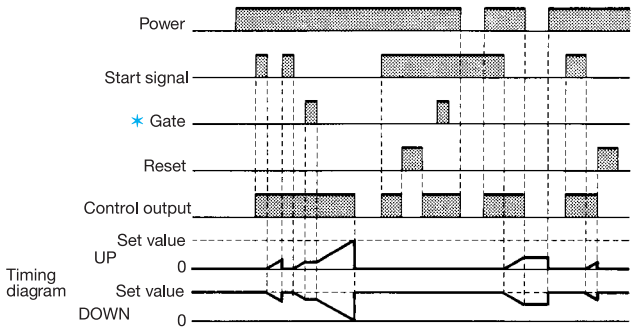
Basic Operation



* Normal output operation will not be possible if the set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

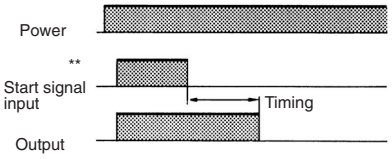
✶ Gate not included on any mode of this relay.

Output mode D: Signal OFF-delay (Timer resets when power comes ON.)



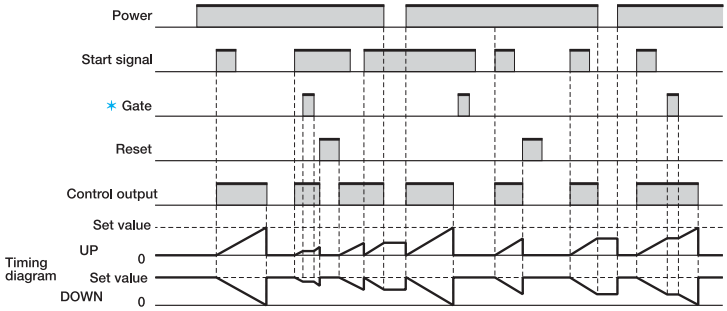
The control output is ON when the start signal is ON (except when the power is OFF or the reset is ON).
The timer is reset when the time is up.

Basic Operation



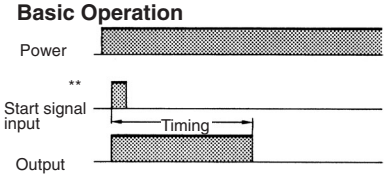
* Output functions only during start signal input when setting is 0.
** Start signal input is enabled during timing.

Output mode E: Interval (Timer resets when power comes ON.)



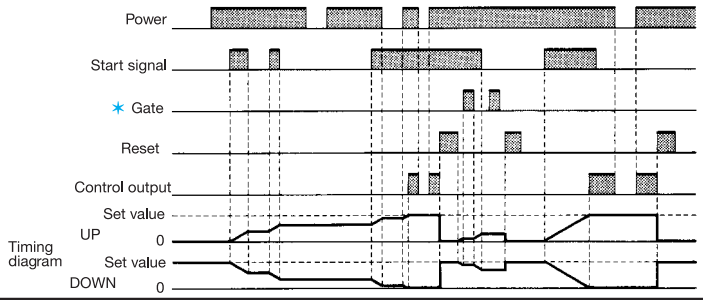
Timing starts when the start signal comes ON.
The control output is reset when time is up.
While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

Basic Operation



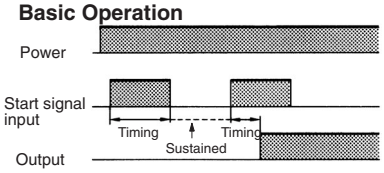
* Output is disabled when the setting is 0.
** Start signal input is enabled during timing.

Output Mode F: Cumulative (Timer does not reset when power comes ON)



Start signal enables timing (timing is stopped when the start signal is OFF or when the power is OFF).
A sustained control output is used.

Basic Operation



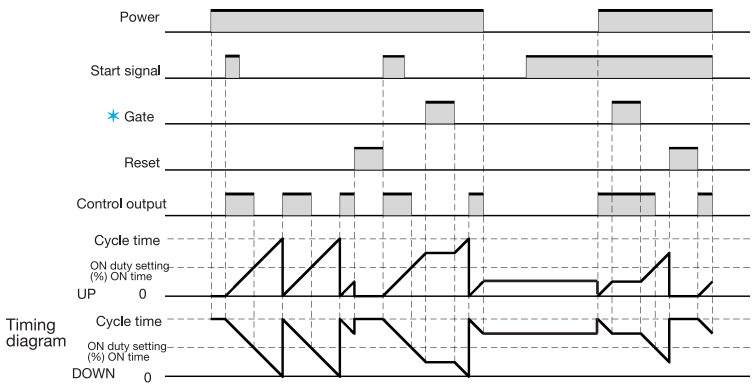
*Output is instantaneous when setting is 0.

✶ Gate not included on any mode of this relay.

Z Mode

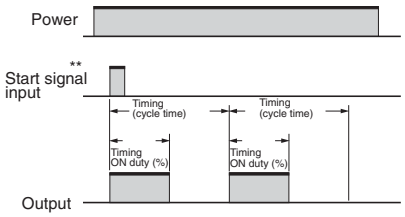
Output quantity can be adjusted by changing the cycle time set in the adjustment level to 1 and by changing the ON duty (%) set value. The set value shows the ON duty (%) and can be set to a value between 0 and 100 (%). When the cycle time is 0, the output will always be OFF. When the cycle time is not 0 and when ON duty has been set to 0 (%), the output will always be OFF. When ON duty has been set to 100 (%), the output will always be ON.

Z mode: ON/OFF-duty Adjustable Repeat Cycle



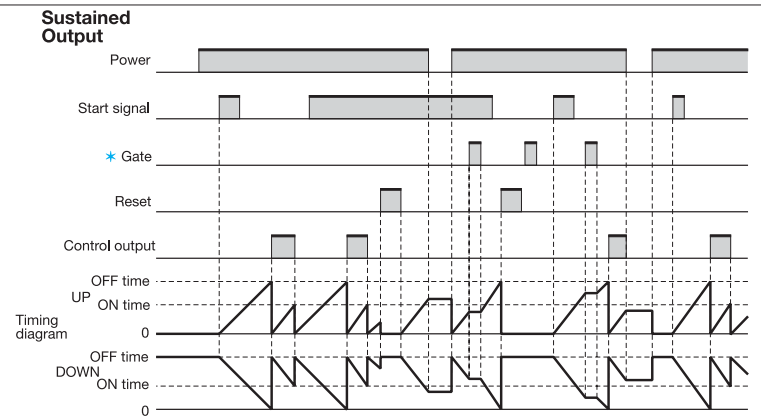
Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (ON at start).
While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

Basic Operation



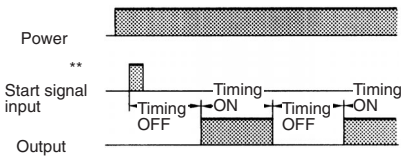
* Normal output operation will not be possible if the set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is enabled during timing.

Output mode T OFF: Twin Timer OFF start



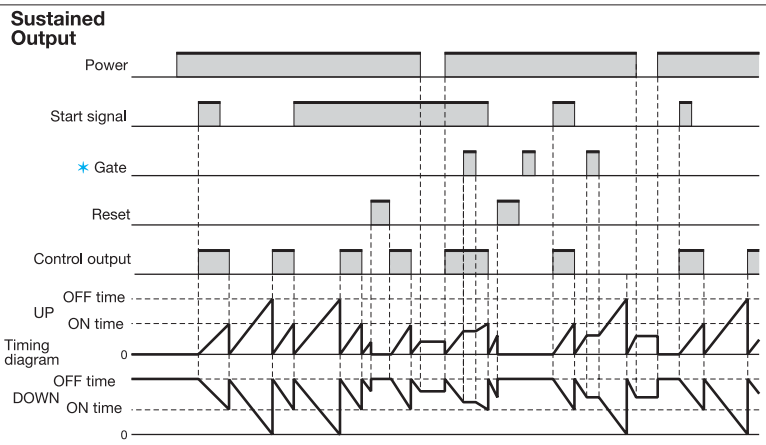
Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (OFF at start).
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation



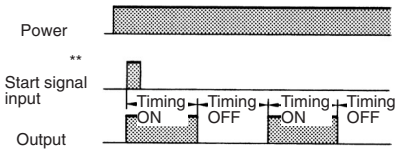
* Normal output operation will not be possible if the ON/OFF set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

Output mode T ON: Twin Timer ON start



Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (ON at start).
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation



* Normal output operation will not be possible if the ON/OFF set time is too short.
Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

* Gate not included on any mode of this Relay.

General Timer Functions

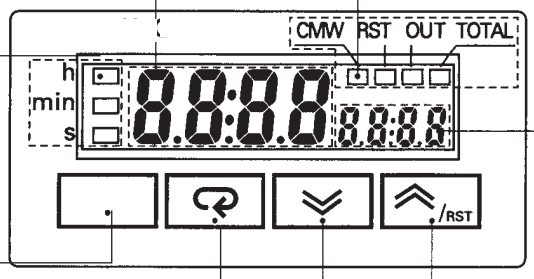
NO. 1 Display
Displays the present value or parameter type. When totalizing count is displayed, the leftmost 4 digits of the 8-digit totalizing count will be displayed (Zeros suppressed)

Operation Display 2

Indicator	Meaning
RST	*Lit during reset using reset input or Reset Key.*
OUT	*Lit when control output is ON.*
TOTAL	*Lit when totalizing value is displayed.*

Operation display 1
Displays the time unit when the timer function has been selected

Example
5 h 30 min
123.4 s
5:30
123.4



No. 2 Display
Displays set value or set value of the parameter. Displays the rightmost 4 digits of the count value when the 700-HXM is used as a totalizing counter (Zeros suppressed)

Level Key
Displays the present value or parameter type. When totalizing count is displayed, the leftmost 4 digits of the 8-digit totalizing count will be displayed (Zeros suppressed)

Mode Key
Press this key to select parameters within each level.

Down Key
Each press of this key decreases values displayed on the No. 2 display. Hold down this key continuously to decrease values quickly. Also returns setting items.

Up/Reset Key
Each press of this key increases values displayed on the No. 2 display. Hold down this key continuously to increase values quickly. Also advances setting items. To reset the present value, press this key while the present value is displayed. If this key is pressed while the totalizing count value is displayed, the totalizing count value and the present value will be reset.

	Description	Pkg. Quantity	Cat. No.

Electrical Ratings		
Pilot Duty Rating		NEMA B300
Rated supply voltage		24 VDC
Operating voltage range		85%…110% of rated supply voltage
Power consumption		1.5 W max. (for max. DC load) (Inrush current: 15 A max.)
►][◄ Make	120V AC	30 A
	240V AC	15 A
◄][► Break	120V AC	3 A
	240V AC	1.5 A
Hp at 120V AC		1/4 Hp
Hp at 240V AC		1/3 Hp
Mechanical		
Mounting method		Flush mounting (Panel or door)
Terminal screw tightening torque		0.5 N•m max.
Display		7-segment, negative transmissive LCD; time display (h, min., s); CMW, OUT, RST, TOTAL Present value (red, 7 mm high characters); Set value (green, 3.4 mm high characters)
Digits		PV: 4 digits SV: 4 digits When total count value is displayed: 8 digits (Zeros suppressed)
Memory backup		EEPROM (non-volatile memory) (number of writes: 100,000 times)
Counter	Maximum counting speed	30 Hz or 5 kHz∗
	Counting range	-999…9,999
	Input modes	Increment, decrement, individual, quadrature inputs
	Output modes	N, F, C, or K
Timer	Time ranges	0.000…9.999 s, 0.00…99.99 s, 0.0…999.9 s, 0…9999 s, 0 min. 00 s…99 min. 59 s, 0.0…999.9 min., 0 h 00 min.…99 h 59 min., 0.0 h…999.9 h, 0 h…9999 h
	Timer modes	Elapsed time (Up), remaining time (Down)
	Output modes	A, B, D, E, F, or Z
Inputs (OV input)	Input signals	For Counter: CP1, CP2, and reset For Timer: Start, gate, and reset
	Input method	No-voltage input (contact short-circuit and open input) Short-circuit (ON) impedance: 1 KΩ max. (Approx. 2 mA runoff current at 0Ω) Short-circuit (ON) residual voltage: 2V DC max. Open (OFF) impedance: 100 kΩ min. Applied voltage: 30V DC max.
	Start, reset, gate	Minimum input signal width: 1 or 20 ms (selectable)
	Power reset	Minimum power-opening time: 0.5 s
Control output		SPDT contact output: 5 A at 250V AC/30V DC, resistive load (cos ϕ = 1)
Minimum applied load		10 mA at 5 VDC (failure level: P, reference value)
Reset system		External, manual, and power supply resets (for timer in A, B, D, E, or Z modes)
Sensor waiting time		260 ms max. (Inputs cannot be received during sensor wait time if control outputs are turned OFF.)

∗ The figures given for maximum counting speed are for incrementing or decrementing operation with a prescale value of x1. If prescaling is used and 5 kHz is set, the maximum counting speed will be reduced to about half. The non-prescaling maximum counting speed will also be reduced to about half when the up/down mode is selected.

Characteristics		
Timer function		Signal start: ±0.03% ±30 ms max. Power-ON start: ±0.03% ±50 ms max.
Insulation resistance		100 mΩ min. (at 500V DC)
Dielectric strength		1,500V AC, 50/60 Hz for 1 min. between output terminals and non-current-carrying metal parts 510V AC, 50/60 Hz for 1 min. between current-carrying terminals (except output terminals) and non-current-carrying metal parts 1,500V AC, 50/60 Hz for 1 min. between output terminals and current-carrying terminals (except output terminals) 500V AC, 50/60 Hz for 1 min. between communications terminals and current-carrying terminals (except output terminals) 1,000V AC, 50/60 Hz for 1 min. between contacts not located next to each other
Noise immunity		Square-wave noise by noise simulator; ±480V (between power terminals), ±600 V (between input terminals)
Static immunity		±8 kV (malfunction), ±15 kV (destruction)
Vibration resistance	Malfunction	10…55 Hz with 0.35 mm single amplitude each in three directions for 10 min.
Shock resistance	Malfunction	100 m/s^2 (approx. 10 G), 3 times each in six directions
Life expectancy	Mechanical	10 million operations
	Electrical	100,000 operations min. (3 A at 250V AC, resistive load)
Ambient temperature	Operating	-10 °C…55 °C (with no icing or condensation)
	Storage	-25 °C…65 °C (with no icing or condensation)
Ambient humidity		25%…85%
EMC		(EMI): Emission Enclosure: EN61326 Class A (EMS): EN61326 Immunity ESD:EN61000-4-2:4 kV contact discharge (level 2) 8 kV air discharge (level 3) Immunity RF-interference:EN61000-4-3:10 V/m (Amplitude-modulated, 80 MHz…1 GHz) (level 3); 10 V/m (Pulse-modulated, 900 MHz ±5 MHz) (level 3) Immunity Conducted Disturbance:EN61000-4-6:3 V (0.15…80 MHz) (level 2) Immunity Burst:EN61000-4-4:2 kV power-line (level 3); 1 kV I/O signal-line (level 4); 1 kV communications-line (level 3) Immunity Surge:EN61000-4-5:1 kV between lines (power and output lines) (level 3); 2 kV between grounds (power and output lines) (level 3)
Approved standards		UL508, CSA C22.2 No.14 Conforms to EN61010-1/IEC61010-1 (Pollution degree 2/overvoltage category II) Conforms to VDE0106/P 100 (Finger Protection)
Enclosure ratings		Panel surface: IP66 and NEMA Type 4 (indoors) Rear case: IP20 Terminal block: IP20
Weight		Approx. 80 g
Certifications		CE Certified; UL508; CSA C22.2 No. 14; ACA
Standards		EN61010-1; IEC61010-1; VDE0106/P 100; NEMA 4/IP66; VDE0106/P100

Input/Output Modes and Count Values

		Up (Increment) Mode ✶	Down (Decrement) Mode ✶
Input edge	UP			DOWN		
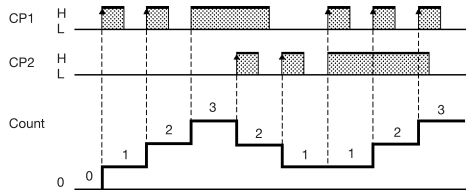
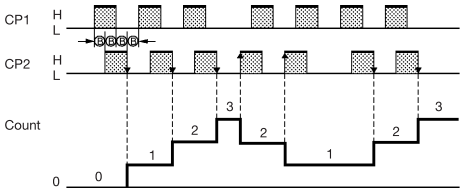
Up/Down B Individual Input	Up/Down C Quadrature Input✶
	




Note: H = Short-circuited
L = Open

✶ (A) indicates the minimum signal width and (B) requires at least 1/2 the minimum signal width. If these conditions are not met, a counting error (+1 or -1) may occur.

Input/Output Mode Settings

Counter Function

If there is a power failure during output ON, output will turn ON again when the power supply has recovered. For one-shot output, an output will be made again for the duration of the output time setting once the power supply has resumed.
Output timing restarted during one-shot outputs is ignored.

		Input Mode		
		Up	Down	Up/Down B.C
Output mode	N				F				C				K			
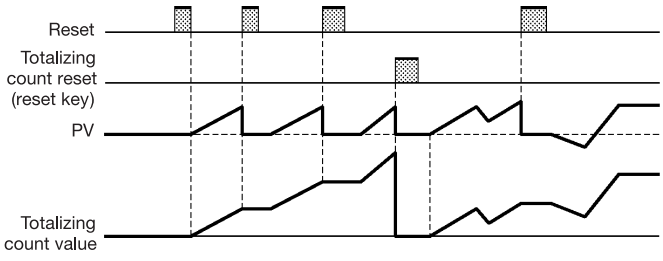
Note: t-a: Less than the output time
t: Output time

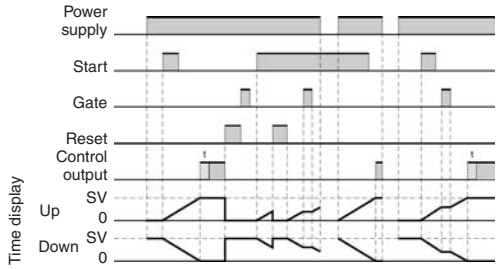
Totalizing Counter Operation



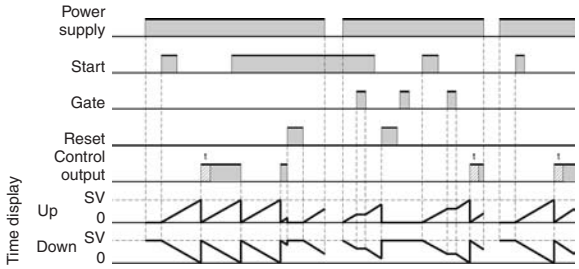
- Totalizing counter continues to count the present value, regardless of whether an reset input (by the reset key) has been made to reset the PV.
- When totalizing count value has reset, the PV is reset at the same time.
- The totalizing count range is 0…99999999. If the totalizing count exceeds 99999999, the count returns to 0. If the count drops below 0, it becomes 99999999.

Timer Function

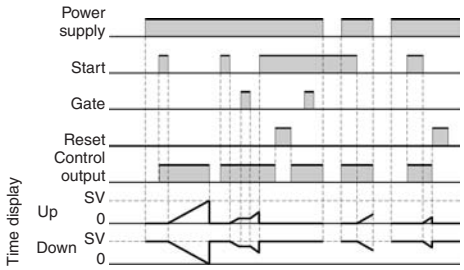
A Mode: Signal ON-Delay*



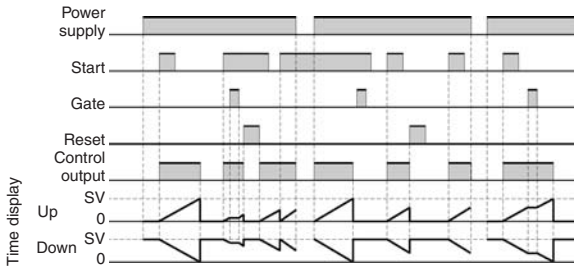
B Mode: Repeat Cycle*



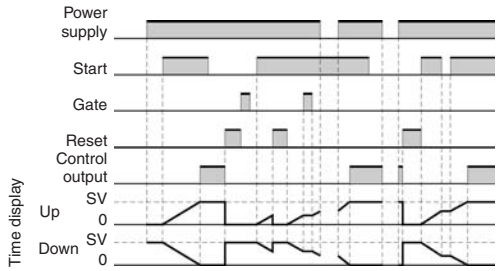
D Mode: Signal OFF-Delay



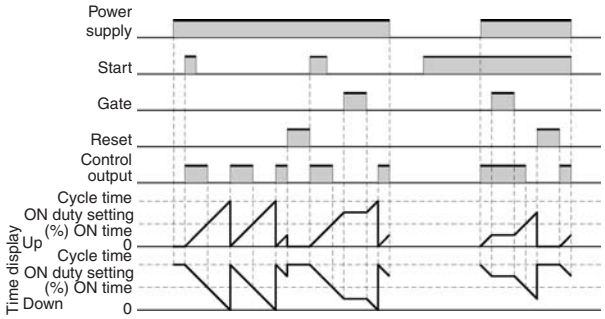
E Mode: One Shot



F Mode: Accumulative

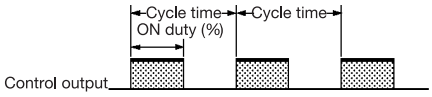


Z Mode: ON/OFF-Duty Adjustable Repeat Cycle



Z Mode

Output quantity can be adjusted by changing the cycle time set in the adjustment level to 1 and by changing the ON duty (%) set value. The set value shows the ON duty (%) and can be set to a value between 0 and 100 (%). When the cycle time is 0, the output will always be OFF. When the cycle time is not 0 and when ON duty has been set to 0 (%), the output will always be OFF. When ON duty has been set to 100 (%), the output will always be ON.



* One-shot output or HOLD output can be selected for output:

Approximate Dimensions are shown in millimeters (inches). Approximate Dimensions are not intended to be used for manufacturing purposes.

Certifications

- UL Listed (File No. E14840) (Guide No. NKCR) per UL 508
- CSA Certified (File No. LR1234) per CSA C22.2 No. 14
- CE Certified

Description

The Bulletin 700-P family of relays has 4 types of contact cartridges to meet your specific switching requirements. Different cartridges can be combined into one relay to yield a custom-tailored application solution. Time delay, latching attachments, overlapping and logic reed contacts are available.

Bulletin 700-P relays use standard (10A) contact cartridges with a double-break and bifurcated design. Bifurcation provides excellent contact reliability and low contact bounce, while the double-break contact design reduces the possibility of contacts welding and enhances the relay's ability to break DC circuits. These relays are supplied with a max. of 12 contacts (max. 8 N.C.).

Bulletin 700-PK master control relays contain (20A) master contact cartridges with large single-contact pads on each side of the spanner for twice the current rating to control heavy loads and for master control of a system. The Bulletin 700-PK relay also has the same doublebreak design as the 700-P relay. These relays are supplied with a max. of 12 contacts (max. 8 N.C.). Time delay and latching attachments are available.

Bulletin 700-P and **-PK** relays combine the advantages of convertible contacts with **Direct Drive**, a construction designed to maintain non-overlap operation between N.O. and N.C. contacts (within published ratings).

Bulletin 700-PH relays contain (35A) tandem contact cartridges. A jumper kit (Cat No. 700-CPH) allows two (20A) master contact cartrridges to be connected in parallel. A maximum of six poles are supplied, up to four of which can be normally closed. Time delay and latch attachments are available.

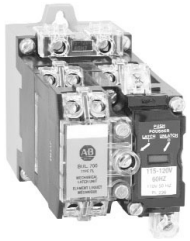
Mechanical Latching Relays



- Factory-Assembled Bulletin 700-PL Latching Relays
- Converts all poles to latching
- AC latch coil — max. 6 poles latching
- DC latch coil — max. 5 poles latching
- Latching relays have 2 coils — latch coil is the relay coil, reset coil is on the latch attachment
- Latch/reset coils can have 2 AC coils, 2 DC coils, or 1 AC and 1 DC coil (e.g., latch with AC power, unlatch with DC battery)

Heavy-Duty Industrial Relays

Accessories, Continued

	Description		Pkg. Quantity	Cat. No.
Surge Suppressor ***Cat. No. 700-N5***	**Surge Suppressors (RC Circuit) —** Surge suppressors reduce the high transient voltages generated when the coil circuit is opened. These suppressors can be used with Bulletin 700-P, -PH, -PK and -N relays, and other electromechanical devices. They contain a resistor and capacitor. Maximum ratings: 150V, AC or DC, 35 VA. Cat. No. 700-N5 requires 1 in. additional depth of enclosure.	Mounting behind relay	1	700-N5
Surge Suppressor ***Cat. No. 700-N24***		Mounting on coil terminal	1	700-N24
Surge Suppressor ***Cat. No. 199-FSMA1***	**Surge Suppressor** When the circuit to a DC operating coil is opened, the inductive energy stored in the coil can generate very high transient voltages. With the addition of the appropriate surge suppressor, the stored energy is absorbed and dissipated limiting the voltage spikes. A surge suppressor is not required with AC 700-R or -RM relays because the AC operating coil transients are suppressed by a full wave rectifier connected to the coil.	24…48V AC/DC	1	199-FSMA9
		50…120V AC/DC	1	199-FSMA10
		130…250V AC/DC	1	199-FSMA11
	Diode Surge Suppressor – for 6…300V DC voltage coils. Used on Bulletin 700-P, -PH, -PK, -N, -F, and -R relays.		1	199-FSMZ-1
35A Jumper Kit ***Cat. No. 700-CPH***	**35 A Jumper Kit –** CSA Approved, UL Listed This 35 A Jumper Kit can be used with any Bulletin 700-P and -PK AC or DC relay, Time-Delay relay or Latch Unit equipped with 20 A Master Cartridges. It does not require any additional panel space. Jumper Kit terminals are designed for one #8 AWG wire or two #10 AWG wires. When connecting the two 20 A Master Cartridges in parallel, it is important that they be the same configuration (Normally Open or Normally Closed). Jumpers can be added to any contact cartridge location on a relay except the two center poles because of the wide spacing. An adhesive label is included with each kit listing the contact ratings.		1	700-CPH
Jumper ***Cat. No. 700-N3*** *Jumper* ***Cat. No. 700-N4***	**Jumpers** (Not applicable for Bulletin 700-PH or -PK relays) – For connection between a middle pole and an outer pole on the left or right side of the relay	**Jumper** – For outer poles	50	700-N3
	Jumpers (Not applicable for Bulletin 700-PH or -PK relays) – For connection between two middle poles.	**Jumper** – For middle poles		700-N4
Check Out Tool ***Cat. No. 700-N23***	**Check Out Tool —** Mechanically maintains the Bulletin 700-P, -PH or -PK relay in the energized position for troubleshooting purposes.		1	700-N23
	Adapter Plate — Simplified relay conversion. Allows you to use the existing mounting holes when you replace a Bulletin 700-B, -BR, -BX or -D relay with a Bulletin 700-P, -PH, or -PK relay.			700-N34
	Protective Cover — For 700-PT Timing Adjustment Knob. Helps prevent tampering with time setting.		5	700-N38

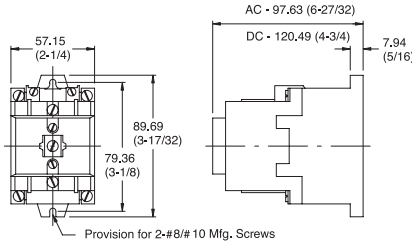
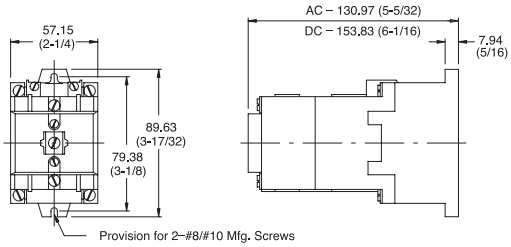
* Coils for AC relays cannot be used in DC relays and vice versa.
† This coil is optimized for 115…120V, 60 Hz applications and will operate satisfactorily at 110V, 50 Hz.
‡ This coil is optimized for 110…115V, 50 Hz applications and will operate satisfactorily at 120V, 60 Hz.
§ This coil is designed and marked for use at 100…110V DC.

Dimensions are shown in millimeters (inches). Dimensions are not intended to be used for manufacturing purposes.

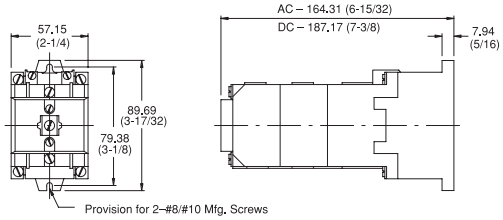
Bulletin 700-P, -PH and -PK Relays



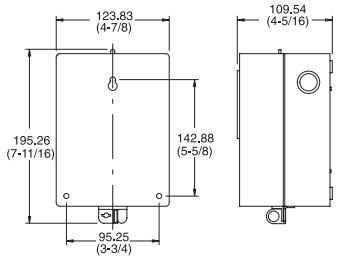
2- and 4-pole Bulletin 700-P, -PK Relay — 2-pole Bulletin 700-PH Relay
Approximate Shipping Weight AC – 0.68 kg (1.5 lbs.),
DC – 1.34 kg (2.95 lbs.)



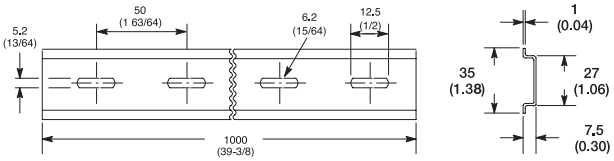
6- and 8-pole Bulletin 700-P, or -PK Relay — 4-pole Bulletin 700-PH Relay
Approximate Shipping Weight AC – 0.79 kg (1.75 lbs.),
DC – 1.45 kg (3.20 lbs.)



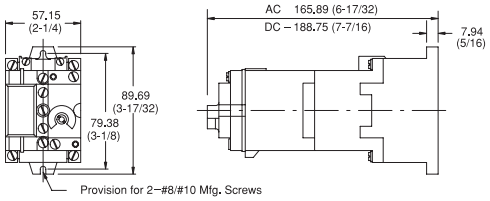
10- and 12-pole Bulletin 700-P, DIN Rail Adapter or -PK Relay — 6-pole
Bulletin 700-PH Relay Approximate Shipping Weight
AC – 1.02 kg (2.25 lbs.), DC – 1.68 kg (3.7 lbs.)



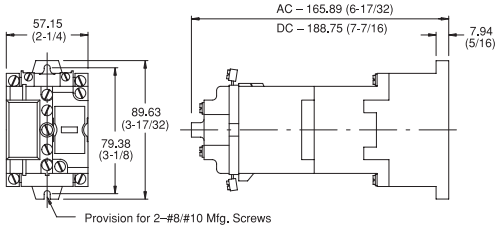
Type 1 Enclosure (Approximate Shipping Weight 1.04 kg (2.3 lb.)
for Bulletin 700-P or -PK Relay (2…4-pole);
Bulletin 700-PH Relay (1…2-pole only);
Cat. No. 700-N31 NEMA Type 1 Enclosure for other Bulletin 700-P, -PH, -PK, -RTC Relays has
same Approximate Dimensions except the depth is 178 mm (7”).
Approximate Shipping Weight 1.26 kg (2.8 lb.)



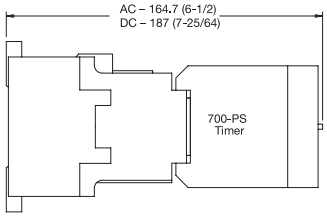
Cat. No. 199-DR1 DIN Mounting Rail Series B
Cat. No. 199-DR4 DIN Mounting Rail Series B Has No Mounting Holes



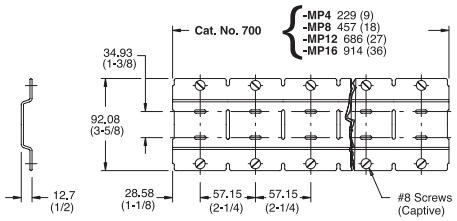
2- and 4-pole Bulletin 700-P or -PK Relay or 2-pole Bulletin 700-PH Relay with Pneumatic Time Delay Attachment
Approximate Shipping Weight AC – 0.85 kg (1.88 lbs.),
DC – 1.5 kg (3.33 lbs.)



2- and 4-pole Bulletin 700-P or -PK Relay or 2-pole Bulletin 700-PH Relay with Mechanical Latch Attachment
Approximate Shipping Weight AC – 0.97 kg (2.13 lbs.),
DC – 1.62 kg (3.58 lbs.)



Bulletin 700-PS Timer Mounted on a 4-pole Bulletin 700 Bulletin 700-P or -PK Relay or 2-pole Bulletin 700-PH Relay.
Approximate Shipping Weight AC – 0.68 kg (1.5 lbs.) without 700-PS,
eDC – 1.34 kg (2.9 lbs.) without 700-PS



Relay Rail for Bulletin 700-P, -PH, -PK, -N, -NM, -R, -RM, -RT, -RTA Relays

Secure the mounting strip with 2 screws at each end relay position.
Use a minimum of one screw at the 3rd, 5th, 7th, etc., relay positions.
Alternate between upper and lower horizontal slots.

Heavy-Duty Industrial Safety Relays

Product Selection/Overview

Bulletin 700S-P

- Mechanically Linked Contacts meet IEC 947-5-1-L
- 2...12 poles – all Mechanically Linked
- Red Faceplate for Easy Identification of Safety Circuits
- IEC Mechanically linked Contacts Symbol Displayed on Front
- Double-break Contacts to Reduce Probability of Welded Contacts
- Visual Indication of Contact State
- Tamper Resistant Cover Helps Prevent Changes Which Could Jeopardize Safety
- Complete Catalog Number Displayed on Front
- Ideal for use in Safety Circuits

Table of Contents

Specifications 9-125
Approximate Dimensions 9-126

Certifications

- UL Listed (File No. E14840) (Guide No. NKCR) per UL 508
- CSA Certified (File No. LR1234) per CSA C22.2 No. 14
- CE Certified

Type S-P Safety Control Relays — AC and DC Coil Voltages

Connection Diagrams and terminal markings			Contacts		AC Coils	24V DC Coils
Coil and Main Contacts	Additional Contacts	Additional Contacts	N.O.	N.C.	Cat. No.∗	Cat. No.∗
	—	—	3	1	700S-P310⊗	700S-DCP310Z24

⊗AC Voltage Suffix Code

The Cat. No. as listed is incomplete. Select a voltage suffix code from the table below to complete the Cat. No.
Example: Cat. No. 700S-P310 becomes Cat. No. 700S-P310A1 for a 120V AC coil.

Hz	24	115-120	230-240	277	460-480
60	A24	A1	A2	A27	A4

∗ For other coil voltages, consult your local Allen-Bradley Distributor.

IEC 947-5-1 Annex L has 2 requirements for a relay to meet for mechanically linked contacts:
1.) If a N.O. contact welds, all the N.C. contacts will remain open and meet a 2500V impulse test.
2.) If a N.C. contact welds, all the N.O. contacts will remain open and meet a 2500V impulse test.
700S-P and 700S-DCP relays meet these requirements including the 2500V impulse test.
The relays shown on this page are shipped from the factory with the 700-CPS cartridge installed and can not be converted to N.O. or N.C. in the Field.

Type			700S-P

⁎ The maximium time is fixed by component characteristics and may be up to 70% greater than listed
† These timing relays require an external potentiometer. To order an external potentiometer, refer to right side of table.

	Description		Cat. No.
Universal Mounting Strip	**Relay Rail** Simplifies panel layout. These indexed strips are easily cut to the required length and bolted, riveted, or spot-welded in place. Relays are installed adjacent to one another on the mounting strip with the captive mounting screws provided. Rows of relays on Relay Rail form their own wiring trough. Can be used with the following relays: 700P, 700-PK, 700PH, 700S-P, 700N, 700-R, 700-RTC	Relays per strip 4	700-MP4

		16	700-MP16
Cat. No. 700-DRA	DIN Rail Adapter	—	700-DRA
Cat. No. 700-NA40	**Front Deck** Front decks can be attached to Bulletin 700 4-pole relays. Provides up to 4 additional convertible poles – without changing the mounting area.	Front Deck with 2 Contact Cartridges	700-NA20
		Front Deck with 4 Contact Cartridges	700-NA40
	Standard Contact Cartridges Available for adding to both rear deck and front deck.	Rear Deck Contact Cartridge	700-C1∗
		Front Deck Contact Cartridge	700-C2∗
	Gold-Plated Contact Cartridges May be used in low power circuits to improve reliability. Good for long term storage, because gold resists corrosion.	Rear Deck Contact Cartridge	700-C1X∗
		Front Deck Contact Cartridge	700-C2X∗
	**Logic Reed Cartridges** Cartridges are hermetically sealed contact for low energy switching.	Rear Deck Contact Cartridge (150V AC, 150 mA, 8VA Max.) (30V DC, 60 mA Max.)	700-C1R∗
	Bifurcated Contact Cartridges Cartridges are less apt to open because of vibration and shock.	Rear Deck Contact Cartridge	700-C1B∗
		Front Deck Contact Cartridge	700-C2B∗
Cat. No. 700-C11Z	**Overlap Contact Cartridges** Cartridges are available in pairs. The N.O. contact closes before the N.C. contact opens. 300V AC max. 125V DC max.	Rear Deck Contact Cartridge (1 pair in a package)	700-C11Z∗
		Front Deck Contact Cartridge (1 pair in a package)	700-C22Z∗
	Timing Unit Replacement (Bifurcated) Contact Cartridge for Bulletin 700-NT relay	Timing Unit Deck Contact Cartridge	X-457011∗
Cat. No. 700-N4,-N3	**Jumpers** (Not applicable for Bulletin 700-PH or -PK relays) – For connection between a middle pole and an outer pole on the left or right side of the relay	Jumper for middle pole to outer poles	700-N3
		Jumper for middle poles	700-N4
	Gold-Plated Contact Timing Unit Replacement Cartridge	—	40163-447-03∗
Cat. No. 700-N5 *Cat. No. 700-N24*	**Surge Suppressors (RC Circuit) —** Surge suppressors reduce the high transient voltages generated when the coil circuit is opened. These suppressors can be used with Bulletin 700-P, -PH, -PK and -N relays, and other electromechanical devices. They contain a resistor and capacitor. Maximum ratings: 150V, AC or DC, 35 VA. Cat. No. 700-N5 requires 1 in. additional depth of enclosure.	For mounting behind relay (1 in. additional depth needed)	700-N5
		For mounting on coil terminal	700-N24
Cat. No. 700-N21	**Check Out Tool** Mechanically maintains the Bulletin 700-N relay in operated position.	Check Out Tool for Bulletin 700-N AC relay	700-N21

∗ **Note:** All contact cartridges are convertible (N.O. or N.C.).

Modifications

Description	Letter Designation	Manual Actuator Addition for Relay	Actuation Qty.
Manual Actuator A factory-installed manual actuator is available for manual energization of the relay coils. To order, replace the letters **"R"** or **"RM"** after the dash in the listed catalog number with the letters listed at right. Ratings 150V AC or DC maximum. Example: **Cat. No. 700-RM300A1** becomes **Cat. No. 700-RMLR300A1**.	RL	Type R	1
	RML	Type RM on Latch Coil	1
	RMR	Type RM on Reset Coil	1
	RMLR	Type RM on Latch and Reset Coil (2 manual actuators required)	2

Accessories for Bulletin 700-R, -RM Relays

	Description		Pkg. Quantity	Cat. No.
	Relay Rail Simplifies panel layout. These indexed strips are easily cut to the required length and bolted, riveted, or spot-welded in place. Relays are installed adjacent to one another on the mounting strip with the captive mounting screws provided. Rows of relays on Relay Rail form their own wiring trough. Can be used with the following relays: 700P, 700-PK, 700PH, 700S-P, 700N, 700-R, 700-RTC	4 Relays per Strip Relays per Strip	5	700-MP4
		8 Relays per Strip Relays per Strip	5	700-MP8
		12 Relays per Strip Relays per Strip	5	700-MP12
		16 Relays per Strip Relays per Strip	5	700-MP16
 Cat. No. 199-DR1	**DIN (#3) Symmetrical Rail** 35 mm x 7.5 mm x 1 m long Zinc-plated, yellow chromated		10	199-DR1
	DIN Rail Adapter Can be used with the following relays: 700P, 700-PK, 700-PH, 700S-P, 700-N, 700-R, 700-RTC		1	700-DRA
	Front Deck A front deck can be attached to Bulletin 700 2-, 3-, or 4-pole AC and DC Type R or RM relays.	Front Deck with one N.O. Contact Cartridge (700-R Relay)	1	700-RA10

 Cat. No. 700-CR5 *Cat. No. 700-CR6* *Cat. No. 700-CR9*	**Contact Cartridges** These cartridges are used to increase the number of poles of a relay. A dummy cartridge is also available to fill empty space not occupied by a contact cartridge. N.O. N.C.	N.O. Contact Cartridge - Green (700-R Relay)	1	700-CR5
		N.C. Contact Cartridge - Yellow (700-R Relay)	1	700-CR6
		N.O. Contact Cartridge - Blue (700-RM Relay)	1	700-CR7
		N.C. Contact Cartridge - Red (700-RM Relay)	1	700-CR8
		"DUMMY" Cartridge - Black (700-R and -RM Relays)	1	700-CR9
	Surge Suppressor When the circuit to a DC operating coil is opened, the inductive energy stored in the coil can generate very high transient voltages. With the addition of the appropriate surge suppressor, the stored energy is absorbed and dissipated limiting the voltage spikes. A surge suppressor is not required with AC 700-R or -RM relays because the AC operating coil transients are suppressed by a full wave rectifier connected to the coil.	12V DC (700-R Relay)	1	199-FSMA9
		12V DC (700-RM Relay)	2	
		24V DC (700-R Relay)	1

	Bulletin 700-PS Solid-State Timing Unit You can attach a Bulletin 700-PS solid-state timing unit to 4-pole 700-R or -RM relays. An adaptor kit, **Cat. No. 700-N26**, is required. See page 9-142 for description.			
	Bulletin 852S Solid-State Timing Unit You can attach a Bulletin 852S solid-state timing unit to 4-pole 700-R or -RM relays.			

Sealed Switch Relays

Specifications

Application Data – Because of the inherent characteristics of this device, the normally open contacts may close before the normally closed contacts open on energization and the normally closed contacts may close before the normally open contacts open on de-energization.

Note: For Type 700-RM, energizing both the latch and unlatch coil together will cause the relay to be energized and both latch and unlatch coils can be operated together continuously.

✶ # Operating Mode
Replace the # in the Cat. No. with the appropriate letter and numbers to indicate the operating mode and the fixed time delay value. Refer to operating mode table.

Digit	Operating Mode	Fixed Time Delay
S	On-Delay – s	**Seconds** –Two digits indicating the fixed time delay in seconds. Three digits indicating the fixed time delay (first digit indicates seconds, next two digits indicate 1/100 seconds).
Z	Off-Delay – s	
Y	On-Delay – Min.	**Minutes** –Two digits indicating the fixed time delay in minutes. Three digits indicating the fixed time delay (first digit indicates minutes, next two digits indicate 1/100 minutes).
I	Off-Delay – Min.	

Examples: **Cat. No. 700-RTC00Y200**U1 is for a relay without contact cartridges. **"Y20"** indicates an On-Delay timer with a 20 minute fixed time delay. This is a "standard relay." Order the contact cartridges separately. **Cat. No. 700-RTC42S020**U1 is for a relay with 2 N.O. cartridges in the timed position and 1 N.C. cartridge in the instantaneous position. **"S02"** indicates an On-Delay timer with a 2 second fixed time delay.

⊗ Voltage Suffix Code

The Cat. No. as listed is not complete. To complete the Cat. No., add a coil code selected from the table below.

Voltage	24V DC—24V AC, 50/60 Hz	120V DC—110/120V AC, 50/60 Hz	240V DC—220/240V AC, 50/60 Hz
Coil Code	U24	U1	U2

Sealed Switch Timing Relays

Accessories

	Description	Cartridge Type	Color	Cat. No.
Cat. No. 700-CRT5 *Cat. No. 700-CRT6* *Cat. No. 700-CR9*	**Contact Cartridges –** These cartridges are used to add contacts to timing relays having unused slots. The N.O., N.C., and "Dummy" cartridges are interchangeable and can be used in timed or instantaneous contact slots. "Dummy" cartridges should be placed in unused cartridge slots to guard against entrance of foreign material.	N.O.	Gray	700-CRT5
		N.C.	Orange	700-CRT6
		Dummy Cartridge	Black	700-CR9
Cat. No. 800MR-N37	**External Potentiometer** – The potentiometer units listed are recommended for timers with remote potentiometer provision. Refer to catalog section on Bulletin 800T or 800M for general construction features. **Connection Cable** – Use shielded twisted pair cable, maximum of 50 feet. Recommended cable (or equivalent): UL style 2517, having two #18 stranded conductors with aluminum mylar foil shield and #20 drain wire. Rated 150 °C, FR-1, 300 volts.	Oiltight∗		800T-U90
		Small Oiltight – Round†‡		800MR-N37
		Small Oiltight – Square†§		800MS-N37
	ATTENTION – If the recommended potentiometer and cable are not used, be certain that the potentiometer and cable wiring is insulated from ground and circuit common for 300V RMS or greater.			
	Type 1 Enclosure – Use for all Bulletin 700-P, -PH and -PK relays except 10- and 12-pole DC relays or 5- and 6-pole DC Bulletin 700-PH relays.			700-N31
	Relay Rail Simplifies panel layout. These indexed strips are easily cut to the required length and bolted, riveted, or spot-welded in place. Relays are installed adjacent to one another on the mounting strip with the captive mounting screws provided. Rows of relays on Relay Rail form their own wiring trough.	Relays per Strip	Pkg. Quantity	
		4	5	700-MP4
		8	5	700-MP8
		12	5	700-MP12
		16	5	700-MP16
	DIN Rail Adapter		1	700-DRA
Cat. No. 199-DR1	**DIN (#3) Symmetrical Rail** 35 mm x 7.5 mm x 1 m long Zinc-plated, yellow chromated EN 50022		5	199-DR1

∗ Legend plate, Cat. No. 800T-X609, must be specified when ordering.
† Add suitable 400 KΩ potentiometer.
‡ Does not include legend plate. Refer to publication A115.
§ Does not include legend plate. Contact your local Allen-Bradley Distributor.

Voltage and Power Requirements

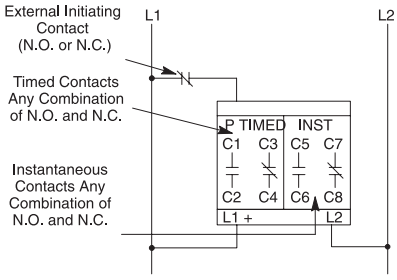
AC Voltage +10% –15% 50/60 Hz	Total Power Required	Initiate Terminal (P) Power	Maximum Allowable Leakage Current	Coil Code
24V AC	8 VA	4 VA	10 mA	U24
110/120V AC	9 VA	4 VA	2.4 mA	U1
220/240V AC	11 VA	5 VA	2.4 mA	U2

DC Voltage +10% –20%	Total Power Required	Initiate Terminal (P) Power	Maximum Allowable Leakage Current	Coil Code
24V DC	10 W	5 W	10 mA	U24
120V DC	11 W	5 W	2.4 mA	U1
240V DC	12 W	5 W	2.4 mA	U2

Type	700-RTC	
Contact Rating (See page 19, pub. 700-SG003B-EN-P)	NEMA B600 600V AC, 5 A NEMA P300 300V DC, 5 A	
Contact Arrangement	1…4 poles. Max. of 2 timed and 2 instantaneous. Available in any combination of N.O. and N.C. contacts	
Contact Material	W (tungsten in a controlled gas atmosphere)	
Operating Mode	Convertible to On-Delay or Off-Delay	
Timing Range	0.05…64 min.	
Reset Time	25 ms	
Repeat Accuracy	±1% (or ±50 ms) at constant voltage and temperature	
Mounting	Panel or Strip Mount	
Surge Suppression	Not required. Timers have internal suppression	
Standards	NEMA B600, NEMA P300	
Certifications	UL Listed, File E10314, Guide NOIV Suitable for use in Class I, Division 2, Groups A, B, C, and D CSA Certified, File LR11924	
Maximum Allowable Leakage Current	24V AC/DC	10 mA
	110/120V AC, 220/240V AC, 120/240V DC	2.4 mA
Ambient Temperature*		
Operating:	–20…+60 °C (–4…+140 °F)	
Storage:	–20…+60 °C (–4…+140 °F)	

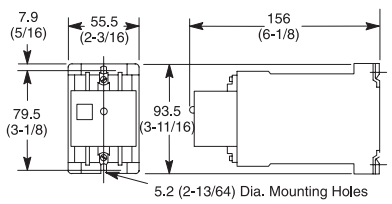
* Continuous duty units placed close to each other (3 in a row) have a temperature range of –20…+45 °C (–4…+113 °F) or should have air circulated around the units. Approximate space of 3/4 in (mm) on all sides is needed.

Typical Wiring Diagram

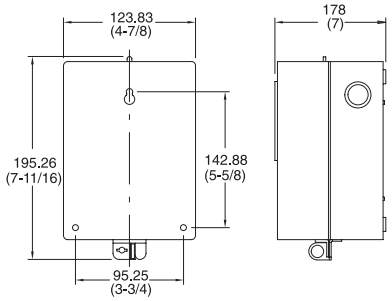


Approximate Dimensions

Approximate Dimensions are shown in millimeters (inches). Approximate Dimensions are not intended to be used for manufacturing purposes.



Approximate Shipping Weight 0.92 kg (2.1 lb.)



NEMA Type 1 Enclosure for RTC Relays
Approximate Shipping Weight 1.26 kg (2.8 lb.)

Solid-State Timer
Cat. No. 700-PSPA1

Bulletin 700-PS

- Solid-State Timer
- 600V AC Maximum, 300V DC Maximum
- Time Range 0.1…120 sec
- Can be attached to a Bulletin 700 Type P, PK, R and RM relay
- Convertable to ON Delay or OFF Delay

* The maximum range may be 50% greater and the minimum range may be 50% less than the values specified.
† This Cat. No. includes only the potentiometer. Order **Cat. No. 800T-N37** for the potentiometer operator and housing.

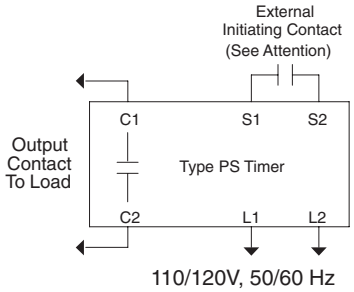
Bulletin 700-PS

Supply Voltage	110…120V AC, 50/60 Hz
Power Requirement	4 VA, 2.5 W
Output Contact Ratings	NEMA B600 and P300. See page 19, pub. 700-SG003B-EN-P.
Operating Temperature Range	–20…+60 °C ambient (–4…+140 °F)
Reset Time	20 ms
Repeat Accuracy, Constant Voltage and Temperature	±2% of setting or ±0.004 s, whichever is greater
Standards	NEMA B600, NEMA P300
Certifications	UL Listed, Class I, Division 2, Groups A, B, C, and D, CSA Certified

Operation

The timer must be energized continuously (L1-L2). ON-Delay: When the initiating contact closes, timing begins. At time-out, the output contact closes. OFF-Delay: When the initiating contact closes, the output contact closes instantly. When the initiating contact re-opens, timing begins. At time-out, the output contact re-opens.

Typical Wiring Diagram*



➲ **Attention** — To avoid damage to timer, do not switch any load in addition to timing relay at terminals S1–S2. Do not apply an external voltage to terminals S1–S2.

* Note: External Potentiometer units have R1, R2 terminals for connecting the potentiometer.

Industrial Timing Relays

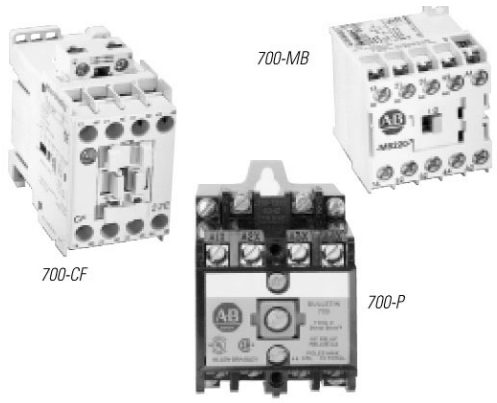
Approximate Shipping Wt. 1.25 kg (2.8 lbs.)

Industrial Relays



This portion of the selection guide covers industrial relays. Industrial relays are used for:

- Safety applications
- Applications requiring long life
- Hazadous Areas and Difficult Environments
- Latch and Pneumatic Timers

Safety Features

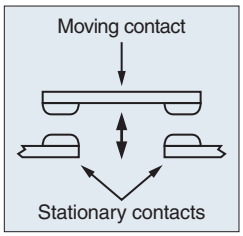
Industrial relays have important features that provide safe, more reliable design of control systems.

- Mechanically linked contacts (positive-guided contacts)
- Double-break contacts make it possible to detect a welded contact and also reduce the posibility of welding a contact.
- Break before make contacts (non-overlapping)

Importance of Mechanically Linked Contacts

This feature allows detection of a welded contact condition. In most relays, each contact opens and closes independently of the other contacts. Mechanically linked (also known as positively guided and Direct Drive™) contacts are linked together, thereby preventing the reclosing of the N.C. contacts if a N.O. contact has welded.

Importance of Double-Break Contacts



This design provides better protection against contact welding than single break design. Other benefits include greater DC load breaking capability and better isolation. It also provides separation of N.O. and N.C. circuits, unlike standard “Form C” contacts. Double-break contacts open the circuit in two places, creating two air gaps. It is analogous to having two contacts in series.

Long Life

Allen-Bradley industrial relays and contacts are designed for long life. Each component is engineered for millions of operations, without compromising peformance. Contact life is often 3 to 5 times greater than plug-in relays.

Safety Applications:

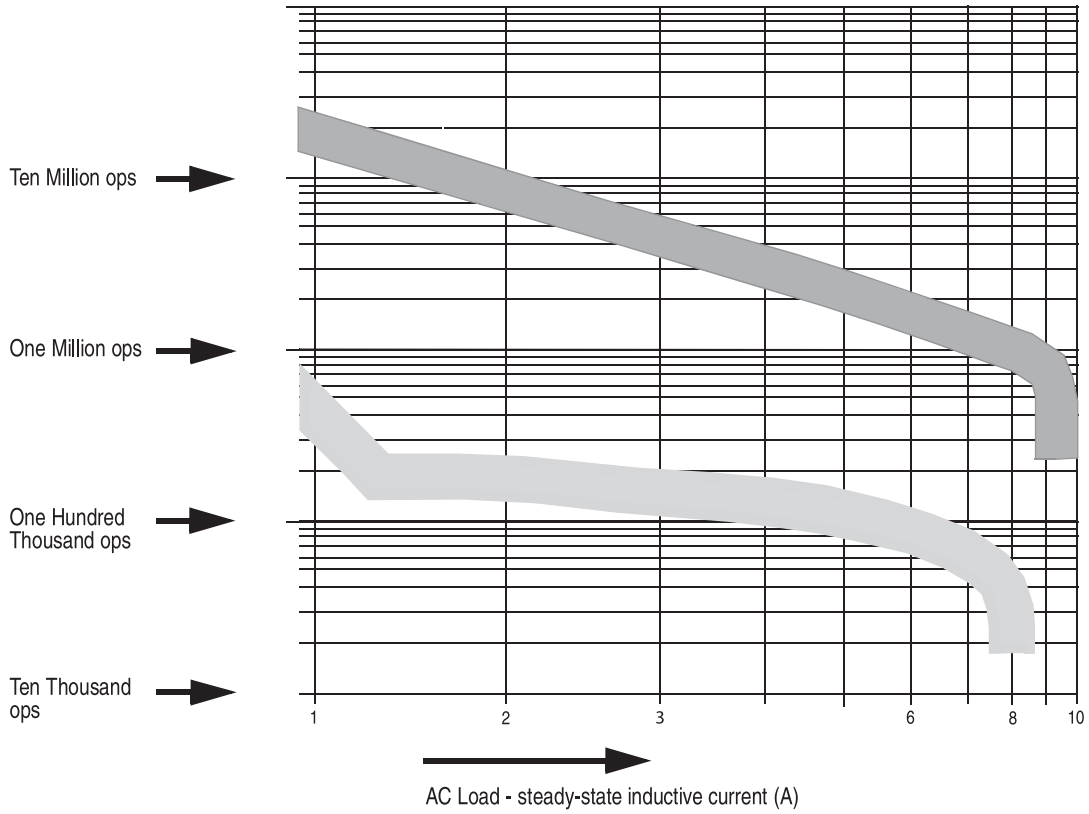
Allen-Bradley industrial relays are frequently used in safety circuits for:

- Safety relay output to expand the current rating or contact life of a safety relay
- Master Control Relays (switching PLC power supplies)
- E-Stop Relays
- Directing course of action when a safety condition occurs
- Light curtain monitoring
- Press control

Additional Features and Options

- Switch up to 12 circuits with one relay
- Sealed contacts for dirty enviroments and low-energy switching
- Coil voltages from 12…600V AC and 6…600V DC
- Switch from 5…600V AC and DC
- Switch from 1 mA…35 A
- Pneumatic timers to maintain timing even if power is lost

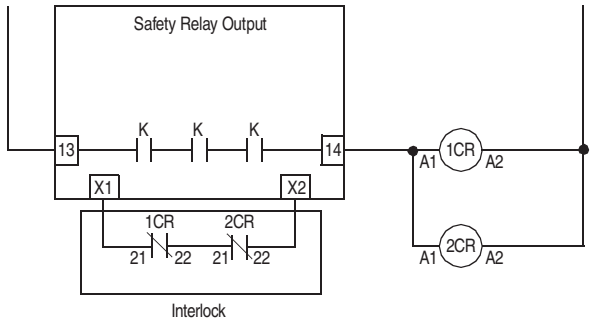
Relay Load Life Comparison—Pilot Duty Loads (solenoid valve, contactor coil, relay coil)

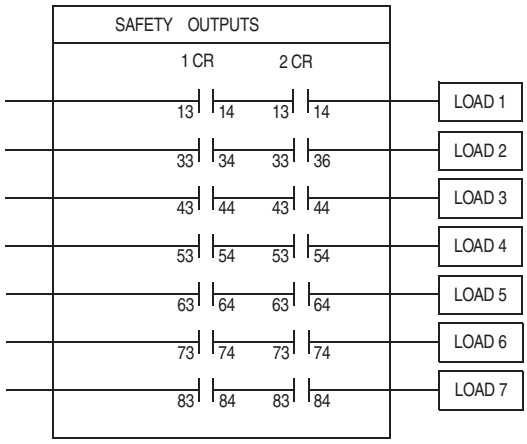


Does not change conditions of sales or warranty.

Safety Relay Output Block Diagram

This diagram illustrates how 2 industrial relays can be used to expand safety relay outputs.





CR = Industrial Relay (700S-P, 700S-CF)

Note: 1 CR and 2 CR are Allen-Bradley Industrial relays with mechanically linked contacts (Bulletins 700-P, 700-CF, and 700-M)

Mechanically Linked Contacts†	Main	Open	Open∗	Open‡					
	Front aux.	Open	Open∗						

∗ If the accessory is a pneumatic timer or latch, there is no mechanically linked performance; the accessory contacts are independent.
† Defined in IEC 947-5-1 annex L. Mechanically linked is a relationship between contacts of opposite types (i.e., N.O. and N.C.).
‡ Side mounted auxiliary contacts provide “mirror contact” performance with main poles only.

DC-14⌘	10	1	15 ms	1	1	15	6050		0.05➤

I_e Rated operational current
U_e Rated operational voltage I Current to be made or broken
PU_eI_e Steady-state power consumption (W)
$T_{0.95}$ Time to reach 95% of the steady-state current (ms) U Voltage before make
† See sub-clause 8.3.3.5.2.
‡ For tolerances on test quantities, see sub-clause 8.3.2.2.
§ The first 50 operating cycles shall be run at U/U_e=1.1 with the loads set at U_e.
♣ The value "6 x P" results from an empirical relationship which is found to represent most DC magnetic loads to an upper limit of P = 50 W, e.g., 6 x P= 300 W.
➤ The ON time shall be at least equal to $T_{0.95}$.
⌘ Where the break current differs from the make current value, the ON time refers to the make current value after which the current is reduced to the break current value for a suitable period e.g., 0.05 s.

Safety Relay Circuit With 5 Safety Outputs

- Use for E-stop control. E-stop will work properly if any one fault occurs (a fault could be one welded contact or one undesired open connection such as a loose wire).
- High output switching capability and long contact life.
- Circuit complies with EN 954 categories 1, 2, 3, 4.
- Prevents restart of the 5 safety outputs if there is a single fault anywhere in the system.

Use (3) 700S-CF relays and this diagram to construct the circuit, or contact your local Allen Bradley sales office for pre-assembled module

Basic Circuit
(1) Output Circuit (3 Relays, 9 Terminal Blocks)

Basic Circuit

⊗ DC Coil Voltage Code

The Cat. No. as listed is incomplete. Select a coil voltage code from the table below to complete the **Cat. No. Example: Cat. No. 700DC-MB400⊗S** becomes **Cat. No. 700DC-MB400Z24S** for 24V DC.

Voltage	12	24	24 with Diode	48	80	110	125	220
DC	Z12	Z24	D24‡	Z48	Z80	Z11	Z3	Z2

* Mechanically Linked Contacts — Summary:
700-M, 700-MB, 700DC-M, and 700DC-MB relays are positively guided for 4 main poles. Restrictions apply when using auxiliary contacts.

† 10-packs can be ordered for the following voltage codes: A1, A2, A24, Z24, D24. To order a 10-pack, specify quantity in multiples of 10 and drop the final "S" from the catalog number.

‡ To determine whether a 700DC-M relay has a diode, check the voltage label above the A1 terminal. A green background indicated that the relay has a built-in diode; a white background indicates that there is no diode.

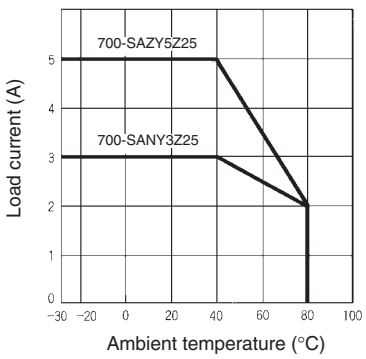
Characteristics

Item		700-SAZY5Z25	700-SANY3Z25
Load Switching Method/Device		Triac	Transistor
Pick-up time		1/2 cycle of load power source cycle time§ + 1 ms max.	0.5 ms max.
Drop-out time		1/2 cycle of load power source cycle time§ + 1 ms max.	2.5 ms max.
Output ON voltage drop		1.6 V (RMS) max.	1.5 V max.
Output Leakage current		5 mA max. (at 100V AC); 10 mA max. (at 200V AC)	5 mA max. (at 125V DC)
Output V_{DRM} V_{CEO} (V)		600	150
Output di/dt (A/uS)		50	—
Output dv/dt (V/uS)		500	—
Output I^2t (A^2S)		41.6	—
Output Tj (°C) Max.		125	150
Insulation resistance		100 MΩ min. (at 500V DC)	
Dielectric strength		1,500V AC, 50/60 Hz for 1 min.	
Vibration resistance (max.)		10…55 Hz, 1.5 mm double amplitude (10 G)	
Shock resistance (max.)		1,000 m/s^2 (100 G)	
Ambient temperature	Operating	–30…80 °C (–22…176 °F) with no icing or condensation	
	Storage	–30…100 °C (–22…212 °F) with no icing or condensation	
Ambient humidity		45…85% (no condensation)	
Standards Compliance		UL508, CSA C22.2 , CE, VDE	
Weight		Approx. 70 g	

∗ With constant current input system. SSR input impedance varies with a change in input (control) voltage.
† Refer to the following graph “Load Current Vs. Ambient Temperature Characteristics” for additional load current details.
‡ If the SSR operation is continuous ON/OFF, this value should be reduced by 50%. Refer to “Inrush Current Resistivity” graphs below.
§ 60 Hz full cycle time = 16.6 ms, 50 Hz full cycle time = 20 ms

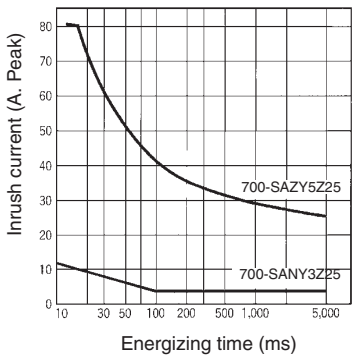
Load Current vs. Ambient Temperature Characteristics

700-SA



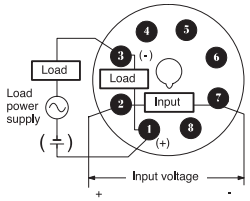
Inrush Current Resistivity♣

700-SA



♣ Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period of time. Surges are considered non-repetitive (max. repeatability once every 5 seconds). Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current will damage the SSR.

Terminal Arrangement (Bottom View)



Note: The plus and minus symbols shown in parentheses are for DC loads.

Basic Application Considerations

High Density Mounting of Multiple SSRs

If multiple SSRs are installed side by side be aware that the outer case wall of the SSR serves to dissipate heat. Install the relays so that they are adequately ventilated. If poor ventilation is unavoidable, reduce the load current to half.

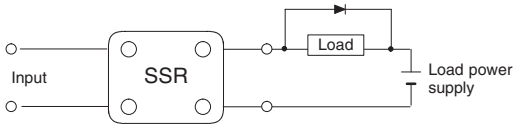
Protective Component

When controlling AC inductive loads, connect an inrush/surge absorbing device (varistor) across the SSR load terminals. If the SSR has built-in surge suppression (Bulletins 700-SE and 700-SH) and additional surge suppression is required, connect the varistor across the terminals of the load device. Select a varistor that meets the conditions of the load voltage outlined in the table below.

Load Voltage	Varistor Voltage	Varistor Surge Resistance
100…120V AC	240…270 V	1000 A min.
200…240V AC	440…470 V	
380…480V AC	820…1000 V	

For additional details applying solid-state relays, refer to pub. 700-AT001A-EN-E, “Solid-State Relay Application Guide” available at The Automation Bookstore http://www.theautomationbookstore.com.

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.

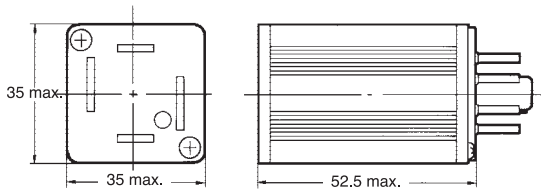


Note: For additional details when using Solid-State Relays, refer to pub. 700-AT001A-EN-E, “Solid-State Relay Application Guide” available at the Automation Bookstore web site http://www.theautomationbookstore.com.

Approximate Dimensions

Note: All units in millimeters unless otherwise indicated. To convert millimeters to inches multiply by 0.0394. Dimensions are not intended to be used for manufacturing purposes.

700-SA∗



∗ Bulletin 700-SA is compatible with cat. nos. 700-HN100, -108, -125, and -204 (sockets).

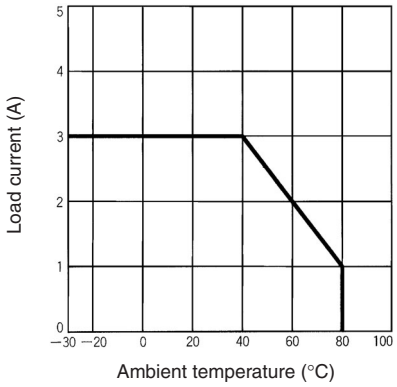
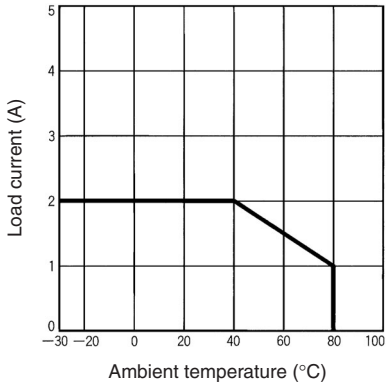
Load Current Versus Ambient Temperature Characteristics

700-SC_ _3...

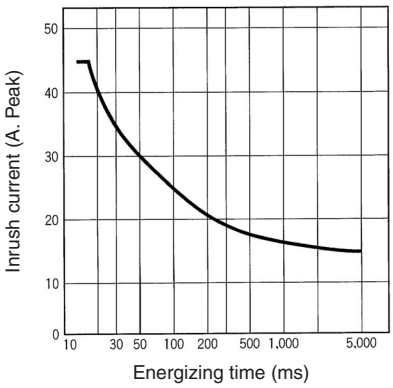


700-SC_ _2...

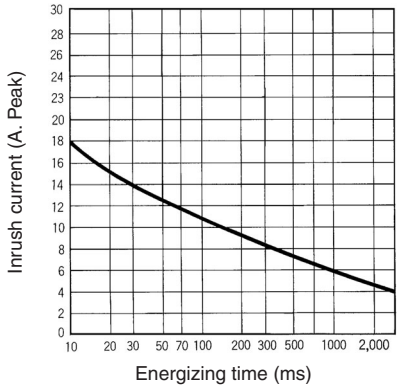


Inrush Current Resistivity*

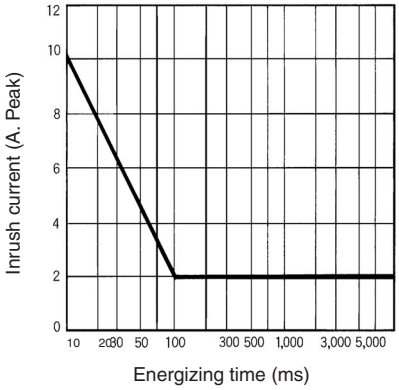
700-SCZ.... **700-SCT...**



700-SCNN3... **700-SCNY3**

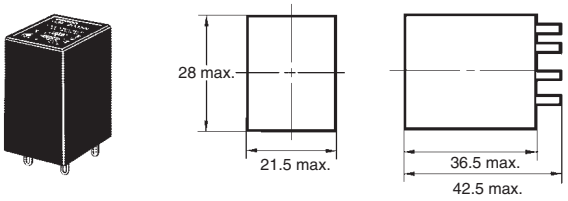


700-SCNN2...



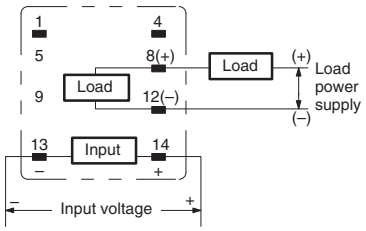
* Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period of time. Surges are considered non-repetitive (max. repeatability once every 2…5 seconds). Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current will damage the SSR.

Note: Bulletin 700-SC is compatible with the 700-HN103, 700-HN104, and 700-HN128 sockets. All units in millimeters unless otherwise indicated. To convert to inches multiply by 0.0394. Dimensions are not intended for manufacturing purposes.



Cat. No 700-SC...∗

Terminal Arrangement/ Internal Connections (Bottom View)



Note: The plus and minus symbols shown in parentheses are for DC loads.

∗ Bulletin 700-SC is compatible with cat. nos. 700-HN103, -HN104, and -HN128 socket.

Basic Application Considerations For Bulletin 700-SC

Connection

For DC Load Switching, Bulletin 700-SC will operate properly if the load is connected to either the positive or negative SSR load terminal.

High-density Mounting of Multiple SSRs

If multiple relays are mounted side by side, be aware that the outer wall of each SSR works as a radiator.

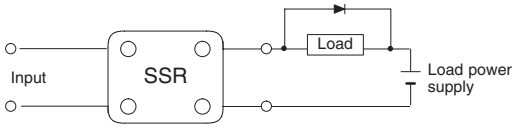
The SSR casing serves to dissipate heat. Install the relays so that they are adequately ventilated. If poor ventilation is unavoidable, reduce the load current by half.

Protective Component

When controlling AC inductive loads, connect an inrush/surge absorbing device (varistor) across the SSR load terminals. If the SSR has built-in surge suppression (Bulletins 700-SE and 700-SH) and additional surge suppression is required, connect the varistor across the terminals of the load device. Select a varistor that meets the conditions of the load voltage outlined in the table below. Note: For additional details applying solid-state relays, refer to pub. number 700-AT001A-EN-E, "Solid-State Relay Application Guide." Document available at http://www.theautomationbookstore.com

Load Voltage	Varistor Voltage	Varistor Surge Resistance
100...120V AC	240...270 V	1000 A min.
200...240V AC	440...470 V	
380...480V AC	820...1000 V	

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.



Note: For additional details when using Solid-State Relays, refer to pub. 700-AT001A-EN-E, "Solid-State Relay Application Guide" available at the Automation Bookstore web site http://www.theautomationbookstore.com.

Bulletin 700-SE

- 20 A (resistive) Max. Continuous Load (Output) Current with Heat Sink
- 264V AC Max. Load Voltage
- 5,12, or 24V DC Control/Input Voltage Options
- Built-in Varistor Helps Absorb Most Electrical Surges
- Low Profile (Flat Pack) Design
- Quick-Connect #110 Input and #250 Output Terminals

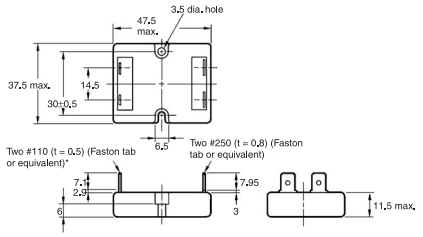
† Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period of time. Surges are considered non-repetitive (max. repeatability once every 2…5 seconds). Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current will damage the SSR.

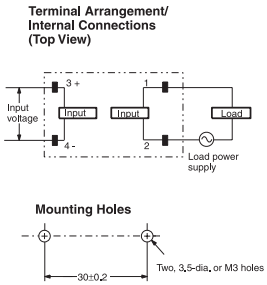
Solid-State Relays

Approximate Dimensions

Mounting Considerations*†‡

Note: All units are in millimeters unless otherwise indicated. To convert to inches multiply by 0.0394. Dimensions are not intended for manufacturing purposes.





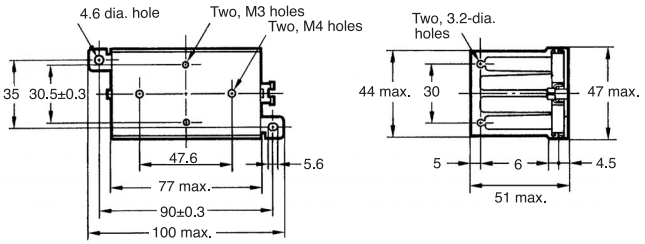
* The proper mounting orientation of the heat sink is so the heat fins run perpendicular to the floor (vertical) to maximize ventilation flow. If the fins do not run perpendicular to the floor, a 30% current derating is required.

† When attaching a heat sink to Bulletin 700-SE, apply a thin layer of heat conductive grease (approximately 0.002in. thick) on the heat sink to maximize heat transfer between the SSR and the heat sink. Recommended types: Silicon based, Dow Corning 340, Toshiba YG6240; Non-silicon based, AOS company type 53300 (Cat No. 46801-010-01).

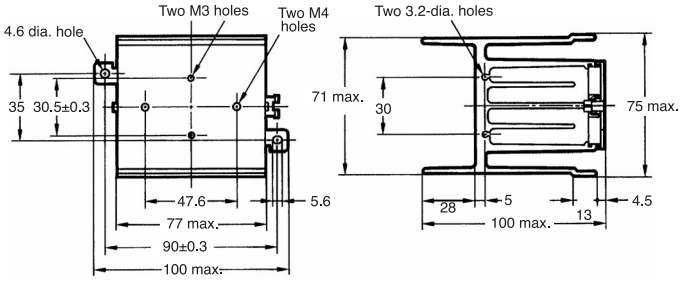
‡ Tighten the SSR's panel/heat sink mounting screws to a torque of 0.78…0.98 N•m (6.9…8.7 lb.-in.)

Heat Sinks

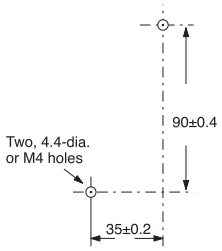
Cat. No. 700-S10



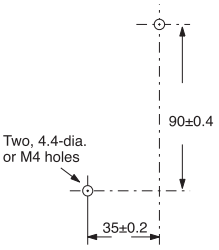
Cat. No. 700-S20



Mounting Holes§

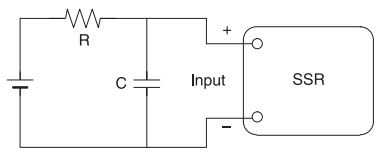


Mounting Holes



§ Tighten the heat sink's panel mounting screws (M4) to a torque of 0.59…0.98 N•m (5.22…8.67 lb.-in.).

Basic Application Considerations



- Because the operation time of Bulletin 700-SE is extremely short, take measures to suppress noise induced between the input terminals. If generation of strong noise is expected, connect an external noise absorber such as an RC circuit.
- Do not apply excessive force to the terminals. Exercise care when pulling or inserting the terminal clips.
- Bulletin 700-SE has a built-in varistor to absorb most inrush/surge currents when operating AC inductive loads If additional suppression is required, connect an external varistor across the load device terminals. Select a varistor that meets the load voltage outlined in the table below.
- For additional details on applying solid-state relays, refer to pub. 700-AT001A-EN-E, "Solid-State Relay Application Guide." Document available at www.theautomationbookstore.com.

Load Voltage	Varistor Voltage	Varistor Surge Resistance
100…120V AC	240…270 V	1000 A min.
200…240V AC	440…470 V	
380…480V AC	820…1000 V	

Bulletin 700-SF

- 3 A (resistive) Max. Continuous Load (Output) Current
- 264V AC or 52.8V DC Max. Load Voltage Options
- 4…24V DC Control/Input Voltage

∗ With constant curent input circuit system, SSR impedance varies with a change in input voltage.
† Input impedance reaches its maximum at the operating voltage.
‡ If the SSR operation is continuous ON/OFF, this value should be reduced by 50%. Refer to the “Inrush Current Resistivity” graphs on page 9-187 for more details.
§ Refer to “Load Current vs. Ambient Temperature Characteristics” on page 9-176 for additional load current details.
♣ 60 Hz full cycle time = 16.6 ms, 50 Hz full cycle time 20 ms

Note: These data are non-repetitive. Keep the inrush current to half the rated value if it occurs repetitively. Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period of time. Surges are considered non-repetitive (max. repeatability once every 2…5 seconds). Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current will damage the SSR.

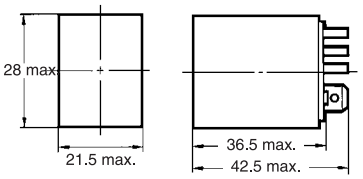
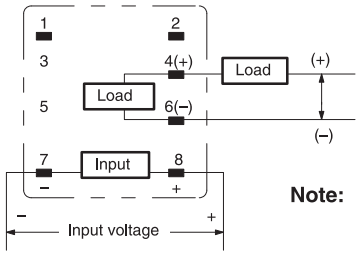
All units are in millimeters unless otherwise indicated. To convert to inches multiply by 0.0394. Dimensions are not intended for manufacturing purposes.



Terminal Arrangement/ Internal Connections (Bottom View)



Note:
1. The plus and minus symbols shown in the parentheses are for DC loads.
2. The coil has no polarity.

Note: The 700-SF is compatible with the 700-HN116 socket.

Basic Application Considerations of Bulletin 700-SF

High Density Mounting of Multiple SSRs

If multiple SSRs are mounted side by side be aware that the outer case wall of the SSR acts as a radiator. The SSR case serves to dissipate heat. Install the relays so that they are adequately ventilated. If poor ventilation is unavoidable, reduce the load current by half.

Connection

For DC load switching, the 700-SF SSR will operate properly if the load is connected to either the positive or negative load terminals.

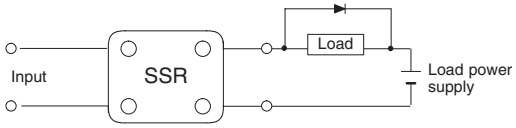
Protective Component To Extend SSR Life

When controlling AC inductive loads, connect an inrush/surge absorbing device (varistor) across the SSR load terminals. If the SSR has built-in surge suppression (Bulletins 700-SE and 700-SH) and additional surge suppression is required, connect the varistor across the terminals of the load device. Select a varistor that meets the conditions of the load voltage outlined in the table below.

Load Voltage	Varistor Voltage	Varistor Surge Resistance
100…120V AC	240…270 V	1000 A min.
200…240V AC	440…470 V	
380…480V AC	820…1000 V	

Note: For additional details applying solid-state relays, refer to pub. number 700-AT001A-EN-E, Solid-State Relay Application Guide. Document available at http://www.theautomationbookstore.com.

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.



Note: For additional details when using Solid-State Relays, refer to pub. 700-AT001A—EN-E, “Solid-State Relay Application Guide” available at the Automation Bookstore web site http://www.theautomationbookstore.com.

Bulletin 700-SH

- 40 A (resistive) Max. Continuous Load (Output) Current with Appropriate Heat Sink
- 264V AC or 528V AC Max. Load Voltage Options

∗ The input impedance is measured at the maximum value of the rated supply voltage.
† With a constant current input system, SSR impedance varies with a change in input voltage.
‡ Refer to graphs, “Temperature Characteristics…” and “Must Release Voltage” on page 9-191 for further details.
§ When specified heat sink is used. Refer to accessories, page 9-189 for applicable heat sinks. For more details, refer to graphs “Load Current Vs. Ambient Temperature Characteristics” on page 9-192, and the “Heat Sink vs. Load Current” graph on page 9-191.
♣ If the SSR operation is continuous ON/OFF, this value should be reduced by 50%. Refer to “Inrush Current Resistivity” graphs on page 9-191 for more details.

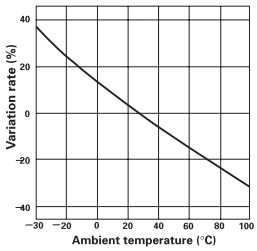
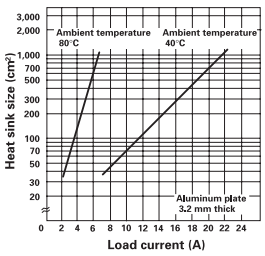
Temperature Characteristics (with Must Operate Voltage and Must Release Voltage)

700-SH_ _G...



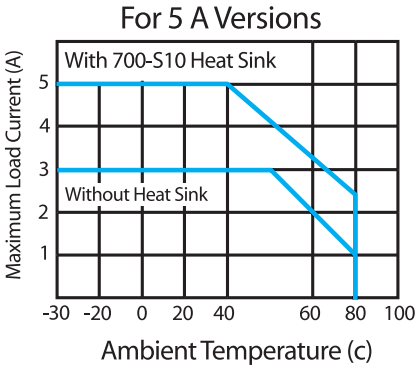
Heat Sink Size vs. Load Current

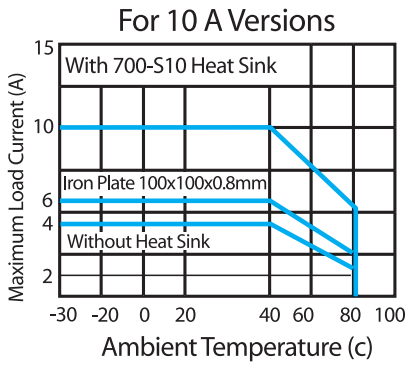
700-SH 25G... ‡

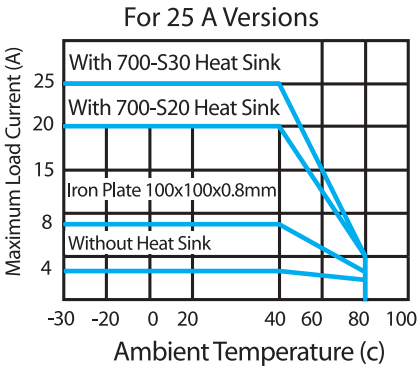


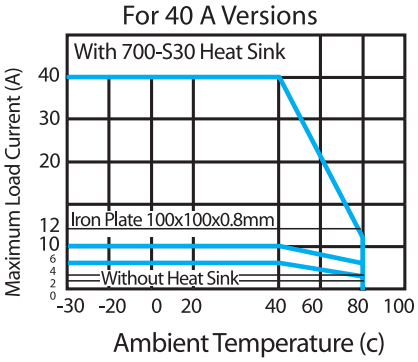
† Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period of time. Surges are considered non-repetitive (max. repeatability once every 2…5 seconds). Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current will damage the SSR.
‡ The heat sink size refers to the combined area of the sides of the heat sink that radiate heat. For example, when a current of 18 A is allowed to flow through the SSR at 40 °C, the graph shows that the heat sink size is about 450 cm^2 . Therefore, if the heat sink is square, one side of the heat sink must be 15 cm (15^2 x 2 = 450) or longer.

Load Current vs. Ambient Temperature Characteristics*†





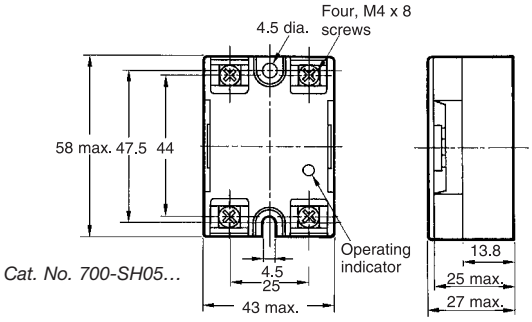


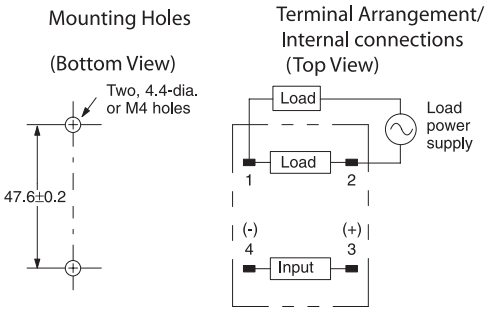


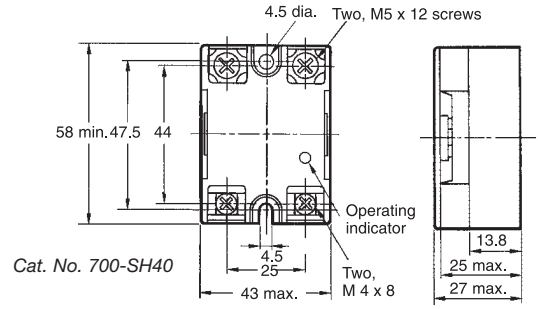
* For the above 4 graphs, the line "with iron plate measuring 100 x 100 x 0.8 in means the SSR is mounted directly to an iron plate of at least this size.
† All graphs assume thermally conductive grease is applied to the solid-state relay.

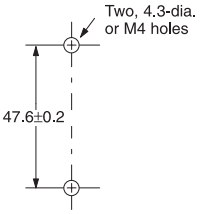
Mounting Considerations*†‡§♣

All units are in mm's unless otherwise indicated. To convert to inches multiply by 0.0394. Dimensions are not intended for manufacturing purposes.



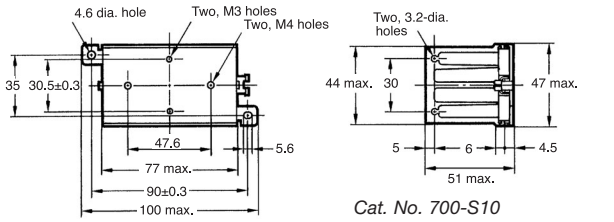


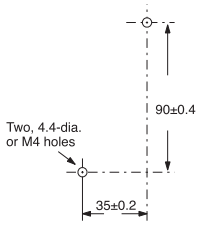


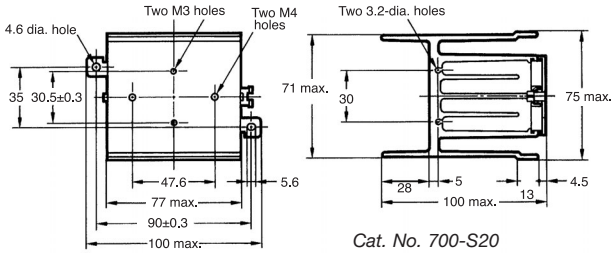


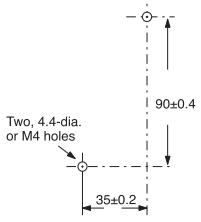
* The proper mounting orientation of the heat sink is so the heat fins run perpendicular to the floor (vertical) to maximize ventilation flow.
† If the fins do not run perpendicular to the floor, a 30% current derating is required.
‡ When attaching a heat sink to Bulletin 700-SH, apply a thin layer of heat conductive grease (approximately 0.002in. thick) on the heat sink to maximize heat transfer between the SSR and the heat sink. Recommended types: Silicon based, Dow Corning 340, Toshiba YG6240; Non-silicon based, AOS company type 53300 (Cat. No. 46801-010-01).
§ Tighten the SSR panel/heat sink mounting screws to a torque of 0.78…0.98 N•m (6.9…8.7 lb•in).
♣ Tighten the SSR terminal wiring screws as follows M4: 0.98…1.37 N•m (8.67…12.12 lb•in), M5: 1.57…2.35 Nm (13.89…20.8 lb•in).

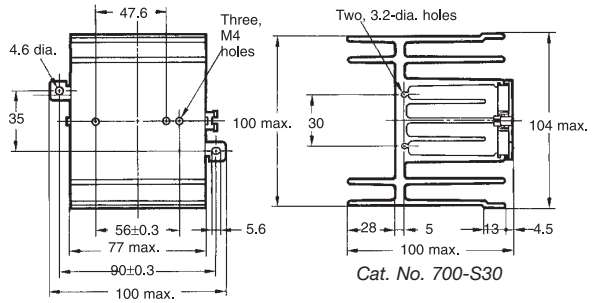
Heat Sinks➢⌘

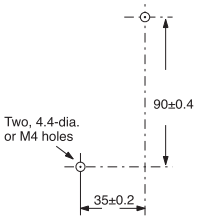












➢ Tighten the heat sink mounting screws (M4) to a torque of 0.98…1.37 N•m (8.67…12.12 lb•in).
⌘ Heat sink weight: cat. nos. 700-S10 = 200 g, 700-S20 = 400 g, 700-S30 = 560 g.

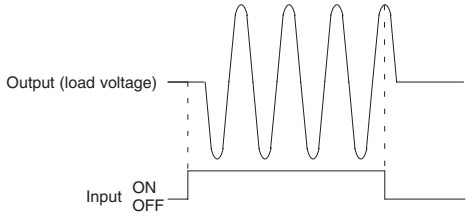
Load Connection

- For an AC load, use a power supply rated at 50 or 60 Hz. The maximum operating frequency is 10 Hz.
- The Bulletin 700-SH has a built-in varistor for surge/inrush protection of AC loads. If additional suppression is required, connect an external varistor across the load device terminals. Select a varistor which meets the load voltage condition outlined in the table below.

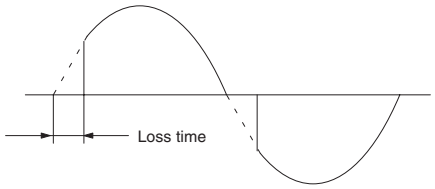
Load Voltage	Varistor Voltage	Varistor Surge Resistance
100…120V AC	240…270 V	1000 A min.
200…240V AC	440…470 V	
380…480V AC	820…1000 V	

Zero Cross Function

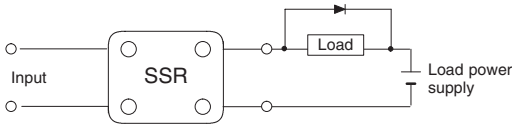
A SSR with a zero cross function operates when an AC load voltage reaches the zero point or its vicinity. This reduces clicking noises when the load is switched, and minimizes the influence of an inductive load, such as a lamp, heater, or motor, on the power supply because the inrush current of the load is reduced. This can also minimize the scale of the inrush current protection circuit.



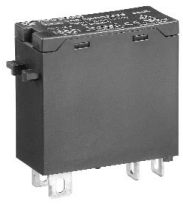
At a low applied voltage, such as 24V AC, the load current is not fully supplied. When the unit is switched ON, the voltage required to power the unit deprives the output signal of the necessary voltage level and thus creates loss time. The lower the load voltage is, the greater the loss time is. This condition, however, will not create any serious problems.



For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.



Note: For additional details when using Solid-State Relays, refer to pub. 700-AT001A-EN-E, “Solid-State Relay Application Guide” available at the Automation Bookstore web site http://www.theautomationbookstore.com.



Bulletin 700-SK

- High Response Speed Models
- Input Sensor Module to Allow High Voltage 100…240V AC or 12…24V DC Sensor
- Interface to Low Voltage (Logic) Device Such as a PC Output Module For Typical SSR Applications
- LED Indicator
- Input Modules and Output Modules Can Be Used With the 700-HN121 Socket

Bulletin 100S-D safety contactors provide mechanically linked, positively guided contacts, which are required in feedback circuits for modern safety applications. The positively guided N.C. auxiliary contacts will not change state when a power contact welds.

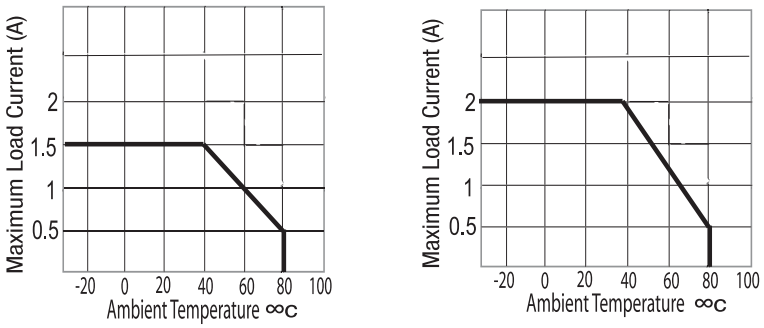
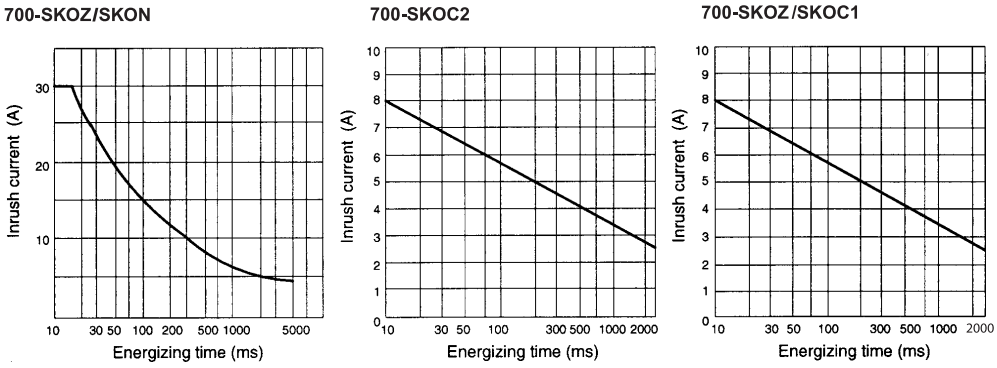
Load Current vs. Ambient Temperature Characteristics

For 2 A Versions



Inrush Current Resistivity†

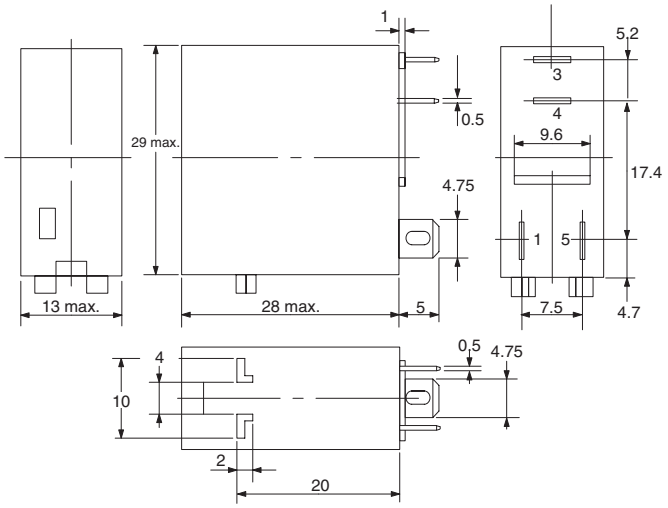


† Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period of time. Surges are considered non-repetitive (max. repeatability once every 2…5 seconds). Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current will damage the SSR.

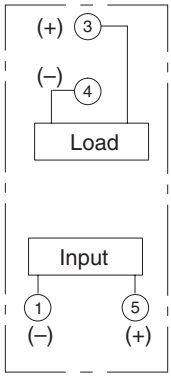
Solid-State Relays

Approximate Dimensions

All units are in millimeters unless otherwise indicated. To convert to inches multiply by 0.0394. Dimensions are not to be used for manufacturing purposes.
Note: The input module (700-SKI) and output module (700-SKO) are compatible with the 700-HN121 socket.



Terminal Arrangement/ Internal Connections (Bottom View)



Application Considerations of Bulletin 700-SK

Connection

For DC load switching, Bulletin 700-SK SSR will operate properly if the load is connected to either the positive or negative SSR load terminal. The load can be connected to either positive or negative output terminals of the SSR.

Protective Element (to extend SSR life)

Since the SSR does not incorporate a surge absorption component, be sure to connect a surge absorption component when using the SSR to control an inductive load.
For additional details applying solid-state relays, refer to pub. number 700-AT001A-EN-E, “Solid-State Relay Application Guide.” Document available at the Automation Bookstore web site http://www.theautomationbookstore.com.

➤ Enables direct RS-232 connection to personal computer using 900Builder software. A Cat. No. 900-CP1X cable or equivalent is also required.
⌘ Provides two event inputs.
✦ Heater burnout is not available for 4…20 mA analog output style 900-TC16 controllers such as the 900-TC16ACTU25

Current Transformer (Use with Bulletins 900-TC8 and 900-TC16 Only for Heater Burnout)

For Use With Bulletin No.	Hole Diameter*	Cat. No.
900-TC8, 900-TC16	5.8 dia.	900-CT1
	12.0 dia.	900-CT2

* The hole diameter is the only functional difference between the Cat. No. 900-CT1 and the Cat. No. 900-CT2. Current output to controller is the same.

Interface Converter (RS-232/USB to RS-485) Model

Converts personal computer RS-232 or USB (Ser. B or later) communications to RS-485. Use for interface with a single Bulletin 900-TC8, or Bulletin 900-TC16 with a Cat. No. 900-TCxxCOM unit installed or a single Cat. No. 900-TC32C_ designated controller. Also allows interface to up to 31 controllers connected on a RS-485 link/network. See page 9-203 for additional details.

Bulletin No.	Size	Power Supply Voltage	Cat. No.
900-CONV	30 mm (W) x 80 mm (H) x 78 mm (D)	100…240V AC	900-CONVZ25
		24V AC/DC	900-CONVU25

RS-232 Interface Cable

Allows connection between a 900-TC8 with a 900-TC8232 option unit and a PC using 900Builder software (see page 9-209) or PC with 900Builder and a 900-CONV RS232-to-RS485 converter (see page 9-205).

Accessory	Cat. No.
RS-232 cable with 9-pin female D shell and 3 flying leads (3 m)	900-CP1X

900Builder Personal Computer Configuration Software

Allows graphical configuration and monitoring of controller parameters with data-logging and trending, plus program upload/download capability for any Bulletin 900-TCx controller.

Accessory	Cat. No.
900Builder™ Personal Computer Configuration Software for Bulletin 900-TCx Temperature Controllers (available in CD format only)	900-BLDSW1

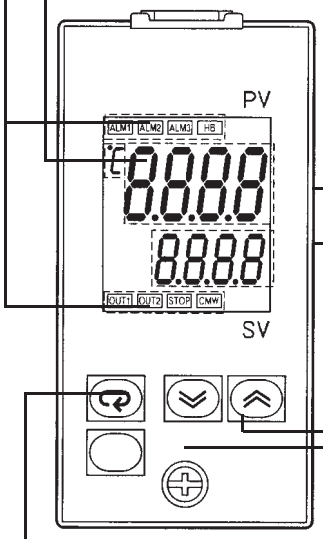
General Functions

Bulletin 900-TC8

Operation Indicators

1. ALM1 (red alarm 1) — Lights when alarm 1 output is ON.
   ALM2 (red alarm 2) — Lights when alarm 2 output is ON.
   ALM3 (red alarm 3) — Lights when alarm 3 output is ON.
2. HB (red heater burnout alarm display)—Lights when a heater burnout is detected. The heater burnout alarm remains ON by setting the heater burnout latch. To reset, turn the power supply OFF and then ON or set the heater burnout alarm value to 0.0 A.
3. OUT1, OUT2 (amber control output 1, control output 2) — Lights when control output 1 and/or control output 2 are ON.
4. STOP (amber stop) — Lights when control of the Bulletin 900-TC8 has been stopped. During control, this indicator lights when an event or the run/stop function has become stopped. Otherwise, this indicator is out.
5. CMW (amber communications writing control) – Lights when communications writing is enabled and is out when it is disabled.

Temperature Unit
Temperature units are displayed when the display unit parameter is configured for temperature. Indication is determined by the currently selected temperature unit parameter set value. When this parameter is set to °C, c is displayed, and when set to °F, F is displayed.



No. 1 Display (Red)
Displays the process value or parameter type.

No. 2 Display (Green)
Displays the set point, manipulated variable, or set value (setup) of the parameter.

Up Key
Each press of this key increases values displayed on the No. 2 display. Holding down this key continuously increases values.

Down Key
Each press of this key decreases values displayed on the No. 2 display. Holding down this key continuously decreases values.

Function Group Selection Key
Press this key to select the setup function group. The setup function group is selected in order operation function group ←→ adjustment function group, initial setting function group ←→ communications setting function group.

Mode Key
Press this key to select parameters within each function group.

Function Group + Mode Keys
This key combination sets the Bulletin 900-TC8 to the protect function group.

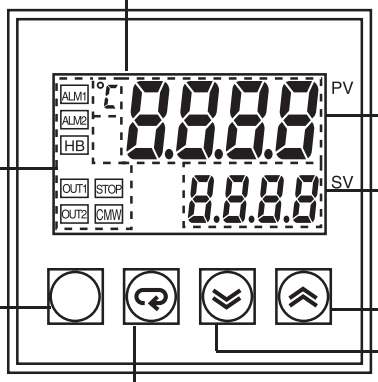
Bulletin 900-TC16

Operation Indicators
1. ALM1 (red alarm 1) — Lights when alarm 1 output is ON. ALM2 (red alarm 2) — Lights when alarm 2 output is ON.
2. HB (red heater burnout alarm display) — Lights when a heater burnout is detected. The heater burnout alarm remains ON by setting the heater burnout latch. To reset, turn the power supply OFF and then ON or set the heater burnout alarm value to 0.0 A.
3. OUT1, OUT2 (amber control output 1, control output 2) — Lights when control output 1 and/or control output 2 (cool) are ON.
4. STOP (amber stop) — Lights when control of the Bulletin 900-TC16 has been stopped. During control, this indicator lights when an event or the run/stop function has become stopped. Otherwise, this indicator is out.
5. CMW (amber communications writing control) — Lights when communications writing is enabled and is out when it is disabled.

Temperature Unit
Temperature units are displayed when the display unit parameter is configured for temperature. Indication is determined by the currently selected temperature unit parameter set value. When this parameter is set to °C, c is displayed, and when set to °F, F is displayed.

No. 1 Display (Programmable Red or Green)
Displays the process value or parameter type.

No. 2 Display (Green)
Displays the set point, manipulated variable, or set value (setup) of the parameter.



Up Key
Each press of this key increases values displayed on the No. 2 display. Holding down this key continuously increases values.

Down Key
Each press of this key decreases values displayed on the No. 2 display. Holding down this key continuously decreases values.

Function Group Selection Key
Press this key to select the setup function group. The setup function group is selected in order operation function group ←→ adjustment function group, initial setting function group ←→ communications setting function group.

Mode Key
Press this key to select parameters within each function group.

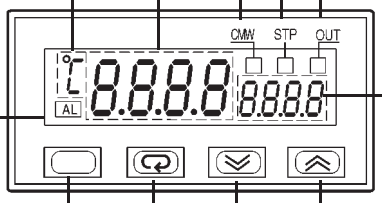
Function Group + Mode Keys
This key combination sets the Bulletin 900-TC16 to the protect function group.

Bulletin 900-TC32

Operation Indicators
1. AL (red alarm) — Lights when alarm output is ON.
2. CMW (amber communications writing control) — Lights when communications writing is enabled and is out when it is disabled.
3. STP (amber stop) — Lights when control of the Bulletin 900-TC32 has been stopped. During control, this indicator lights when an event or the run/stop function has become stopped. Otherwise, this indicator is out.
4. OUT (amber control output) — Lights when control output is ON.

Temperature Unit
Temperature units are displayed when the display unit parameter is configured for temperature. Indication is determined by the currently selected temperature unit parameter set value. When this parameter is set to °C, c is displayed, and when set to °F, F is displayed.

No. 1 Display (Red)
Displays the process value or parameter type.



No. 2 Display (Green)
Displays the set point, manipulated variable, or set value (setup) of the parameter.

Up Key
Each press of this key increases values displayed on the No. 2 display. Holding down this key continuously increases values.

Down Key
Each press of this key decreases values displayed on the No. 2 display. Holding down this key continuously decreases values.

Function Group + Mode Keys
This key combination sets the Bulletin 900-TC32 to the protect function group.

Function Group Selection Key
Press this key to select the setup function group. The setup function group is selected in order operation function group ←→ adjustment function group, initial setting function group ←→ communications setting function group.

Mode Key
Press this key to select parameters within each function group.

✶ Applicable standards by input type are as follows:
K, J, T, E, N, R, S, B: JIS C1602-1995
L: Fe-CuNi, DIN 43710-1985
U: Cu-CuNi, DIN 43710-1985

† JPt100: JIS C1604-1989, JIS C1606-1989
Pt100: JIS C1604-1997, IEC 751
Shaded ranges indicate default settings.

‡ The non-contact temperature sensor must be configurable for type K thermocouple output within either of the four specified ranges. For example, an OMRON ES1A infrared sensor.

Digital Temperature Controller

Specifications*

Bulletins 900-TC8, 900-TC16, and 900-TC32

Technical/Control Ratings				
Supply Voltage (Line)			100…240V AC, 50/60 Hz	24 V AC, 50/60 Hz or, 24 V DC
Operating Voltage Range (Line)			85…110% of rated supply voltage	
Power Consumption	900-TC8		5.4 VA @120V AC, 9 VA @ 240V AC	5 VA @ 24 V AC, 4 W @ 24 V DC
	900-TC16		4.7 VA @120V AC, 7 VA @ 240V AC	4 VA @ 24 V AC, 3 W @ 24 V DC
	900-TC32		4.3 VA @ 120V AC, 7 VA @ 240V AC	4 VA @ 24 V AC, 2.5 W @ 24 V DC
Sensor Input	Thermocouple		K, J, T, E, L, U, N, R, S, B (controller applies cold junction compensation)	
	Platinum Resistance Thermometer		Pt100, JPt100 (controller RTD excitation current: approx. 1 mA) 2- or 3-wire configuration	
	Non-Contact Temperature Sensor		10…70 °C, 60…120 °C, 115…165 °C, 160…260 °C	
	Voltage Input		0…50 mV	
Control Output	Electro-mechanical Relay output	900-TC8	SPST-NO, 250V AC @ 5 A, 30V DC @ 10 A (max. resistive load), electrical life: 100 000 operations	
		900-TC16	SPST-NO, 250V AC @ 3 A, 30V DC @ 10 A (max. resistive load), electrical life: 100 000 operations	
		900-TC32	SPST-NO, 250V AC @ 2 A, 30V DC @ 2 A (max. resistive load), electrical life: 100 000 operations	
	Voltage output (SSR compatible)	900-TC8	12V DC (PNP), max. load current: 40 mA, with current limit protection	
		900-TC16	12V DC (PNP), max. load current: 21 mA, with current limit protection	
		900-TC32	12V DC (PNP), max. load current: 21 mA, with current limit protection	
	Analog	900-TC8	DC: 4...20 mA, max. load 600 ohms, resolution 2,600	
		900-TC16	DC: 4...20 mA, max. load 600 ohms, resolution 2,600	
		900-TC32	NA	
Alarm Output	900-TC8		SPST-NO, 250V AC @ 3 A, 30V DC @ 5 A (max. resistive load), electrical life: 100 000 operations	
	900-TC16, 900-TC32		SPST-NO, 250V AC @ 1 A, 30V DC @ 2 A (max. resistive load), electrical life: 100 000 operations	
Event Input ‡	Contact		ON: 1K Ω (max.) OFF: 100K Ω (min.)	
	Non-contact		ON: Voltage Drop 1.5V (max.) OFF: Leakage current 0.1 mA (max.)	
Control Method			ON/OFF control or 2-PID (auto-tune and self-tune)	
Setting Method			Digital setting using front panel keys or 900Builder software	
Indication Method			7-segment digital display and single-lighting indicator	
Character height	900-TC8		Process Value Display: 14.0 mm; Set Point Display: 9.5 mm	
	900-TC16		Process Value Display: 9.9 mm; Set Point Display: 6.4 mm	
	900-TC32		Process Value Display: 7.0 mm; Set Point Display: 3.5 mm	
Indication Accuracy	Thermocouple		(±0.5% of indicated value or ±1°C, whichever greater) ±1 digit max. †	
	Platinum Resistance Thermometer (RTD)		(±0.5% of indicated value or ±1°C, whichever greater) ±1 digit max.	
	Analog Input (0…50 mV)		±0.5% FS±1 digit max.	
	CT Input (900-TC8, 900-TC16)		±5% FS±1 digit max.	
Hysteresis			0.1…999.9 EU (in units of 0.1 EU)	
Proportional Band (P)			0.1…999.9 EU (in units of 0.1 EU)	
Integral Time (I)			0…3999 s (in units of 1 s)	
Derivative Time (D)			0…3999 s (in units of 1 s)	
Control Period			1…99 s (in units of 1 s)	
Manual Reset Value			0.0…100.0% (in units of 0.1%)	
Alarm Setting Range			–1999…+9999 (decimal point position depends on input type)	
Sampling Period			500 ms	
Other Functions			According to Controller model	

* Unless noted, specifications apply to Bulletins 900-TC8, 900-TC16, and 900-TC32.

† The indication of K thermocouples in the –200…+1300 °C range, and T and N thermocouples at a temperature of –100 °C or less, and U and L thermocouples at any temperature is ±2 °C ±1 digit maximum. The indication of B thermocouples at a temperature of 400 °C or less is unrestricted. The indication of R and S thermocouples at a temperature of 200 °C or less is ±3 °C ±1 digit maximum.

‡ Applies to 900-TC8 or 900-TC16.

Bulletins 900-TC8, 900-TC16, and 900-TC32, Continued

General/Environmental Ratings		
Weight (includes carton)	900-TC8	Approx. 390 g (13.8 ounces)
	900-TC16	Approx. 215 g (7.6 ounces)
	900-TC32	Approx. 160 g (5.6 ounces)
	900-TC8232, COM, EIM	Approx. 20 g (0.7 ounces)
	900-TC16COM, EIM	Approx. 35 g (1.2 ounces)
Ambient Temperature		–10…+55 °C (with no condensation or icing)
Ambient Humidity		25…85%
Storage Temperature		–25…+65 °C (with no condensation or icing)
Insulation Resistance		20 MΩ min. (at 500V DC)
Dielectric Strength		2000V AC, 50 or 60 Hz for 1 min. (between different charging terminals)
Maximum Vibration		10…55 Hz, 10 m/s² (1 G) for 10 minutes each in X, Y, and Z directions
Maximum Shock		200 m/s² (20 G), 3 times each in 3 axes, 6 directions (when using a relay: 100 m/s² [10 G])
Protective Structure		Front panel: UL Type 4X for indoor use (equivalent to IP66), rear case: IP20, terminals: IP00 VDE 0106
Installation Environment		Installation category II, pollution class 2 (IEC 61010-1 compliant)
Memory Protection		EEPROM (non-volatile memory) (number of writes: 100 000)
EMC	Emission Enclosure	EN55011 Group 1 class A
	Emission AC Mains	EN55011 Group 1 class A
	Immunity ESD	EN61000-4-2: 4 kV contact discharge (level 2); 8 kV air discharge (level 3)
	Immunity RF-Interference	EN61000-4-3: 10V/m (amplitude modulated, 80 MHz…1 GHz) (level 3) 10V/m (pulse modulated, 900 MHz)
	Immunity Conducted Disturbance	EN61000-4-6: 10V (0.15…80 MHz) (level 3)
	Immunity Burst	EN61000-4-4: 2 kV power-line (level 3); 2 kV I/O signal-line (level 4)
	Surge Immunity	EN61000-4-5: 1 kV line to line (level 2), 2 kV line to ground (level 3)
	Voltage DIPs/Short Interruptions	EN61000-4-11: 100%/0.5 period
Conformity to Standards		UL3121-1, CSA C22.2 No. 14-95, E.B.1402C; conforms to EN50081-2, EN50082-2, EN61010-1 (IEC 61010-1); conforms to VDE 0106/part 100 (finger protection) when the terminal cover is mounted.
Communications		
Transmission Path Connection		Multiple points
Communications Method ∗	900-TC8	RS-232C or RS-485 (2-wire, half duplex)
	900-TC16	RS-485 (2-wire, half duplex)
	900-TC32	RS-485 (2-wire, half duplex)
Synchronization Method		Start-stop synchronization
Baud Rate		1200/2400/4800/9600/19 200 bps
Transmission Code		ASCII
Data Bit Length †		7 or 8 bits
Stop Bit Length †		1 or 2 bits
Error Detection, Vertical Parity		None, even, odd
Flow Control		Not available
Interface	900-TC8 ∗	RS-485/RS-232C
	900-TC16 †	RS-485
	900-TC32 †	RS-485
Retry Function		Not available
Communications Buffer		40 bytes
Heater Burnout Alarm (Use with Bulletins 900-TC8 and 900-TC16 Only)		
Max. Heater Current	Single-Phase AC	50 A
Input Current Readout Accuracy		±5%FS ±1 digit max.
Heater Burnout Alarm Setting Range		0.0…50.0 A (0.1 A units) ‡
Min. Detection ON Time		190 ms §
Current Transformer (Sold Separately) Ratings (Use with Bulletins 900-TC8 and 900-TC16 Only)		
Dielectric Strength		1000V AC (1 min.)
Vibration Resistance		50 Hz 98 m/s² (10 G)
Weight (includes carton)	900-CT1	Approx. 19 g (0.67 ounces)
	900-CT2	Approx. 65 g (2.3 ounces)
Conformity to Standards		
Standards		NEMA/EEMAC ICS 2 (Industrial Controls and Systems) UL, CSA, IEC

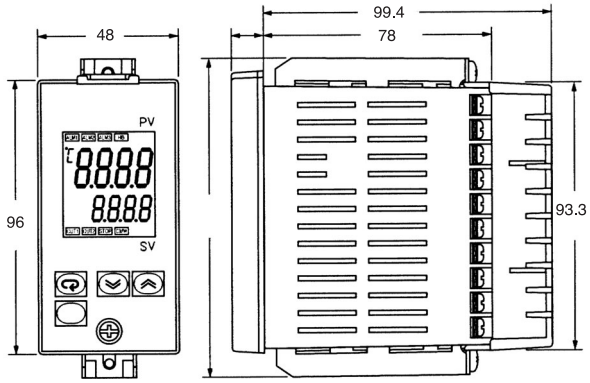
∗ RS-232C communications is only supported for Bulletin 900-TC8 (Cat. No. 900-TC8232 option board installed). All controllers support RS-485 communications (32 linked/networked devices) by appropriate option unit or correct controller catalog number.
† The baud rate, data bit length, stop bit length, or vertical parity can be individually set using the communications configuration function group.
‡ When the configured value of the heater burnout alarm is 00 A, the heater burnout alarm will always be OFF. When the configured value is 50.0 A, the heater burnout alarm will always be ON.
§ When the heater ON time is less than 190 ms, heater burnout detection and heater current measurement will not be carried out.

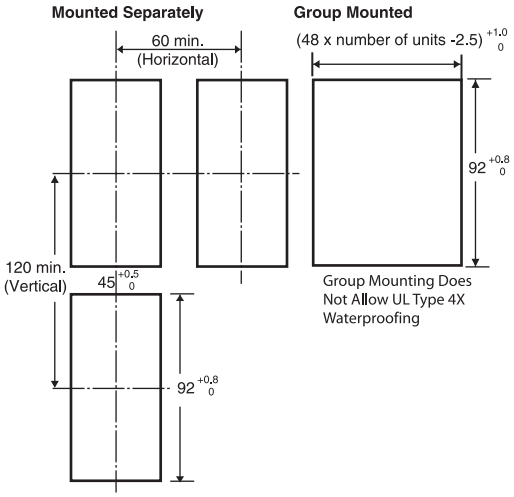
Digital Temperature Controller

Approximate Dimensions

Approximate dimensions are shown in millimeters unless otherwise indicated (to convert to inches, multiply by 0.0394). Dimensions are not to be used for manufacturing purposes.

Bulletin 900-TC8

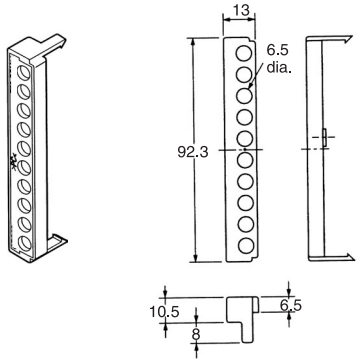




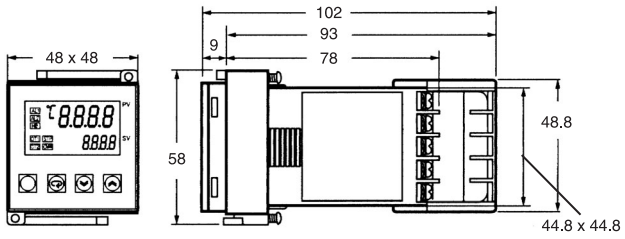
Panel Cutouts

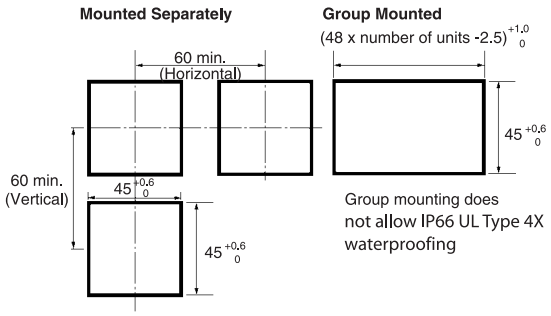
- Recommended panel thickness is 1…8 mm.
- Group mounting is not possible in the vertical direction. (Maintain the specified mounting space between controllers when they are group mounted. UL Type 4X is not possible when group mounting.)
- To mount the unit so that it is waterproof, apply the waterproof gasket to the unit
- When two or more units are mounted together, make sure that the surrounding ambient temperature does not exceed the allowable operating temperature specification.

Safety Terminal Cover*



Bulletin 900-TC16

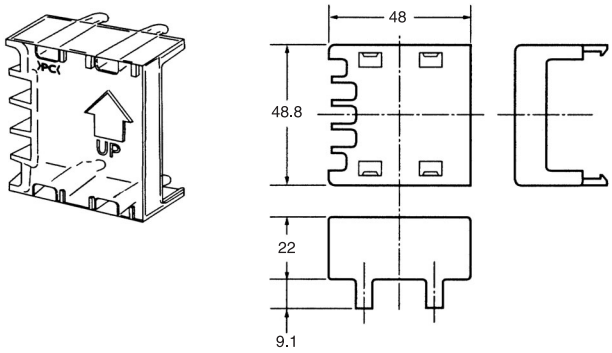




Panel Cutouts

- Recommended panel thickness is 1…5 mm.
- Group mounting is not possible in the vertical direction. (Maintain the specified mounting space between Controllers when they are group mounted. IP66 UL Type 4X is not possible when group mounting.)
- To mount the unit so that it is waterproof, apply the waterproof gasket to the unit.
- When two or more units are mounted together, make sure that the surrounding ambient temperature does not exceed the allowable operating temperature specification.

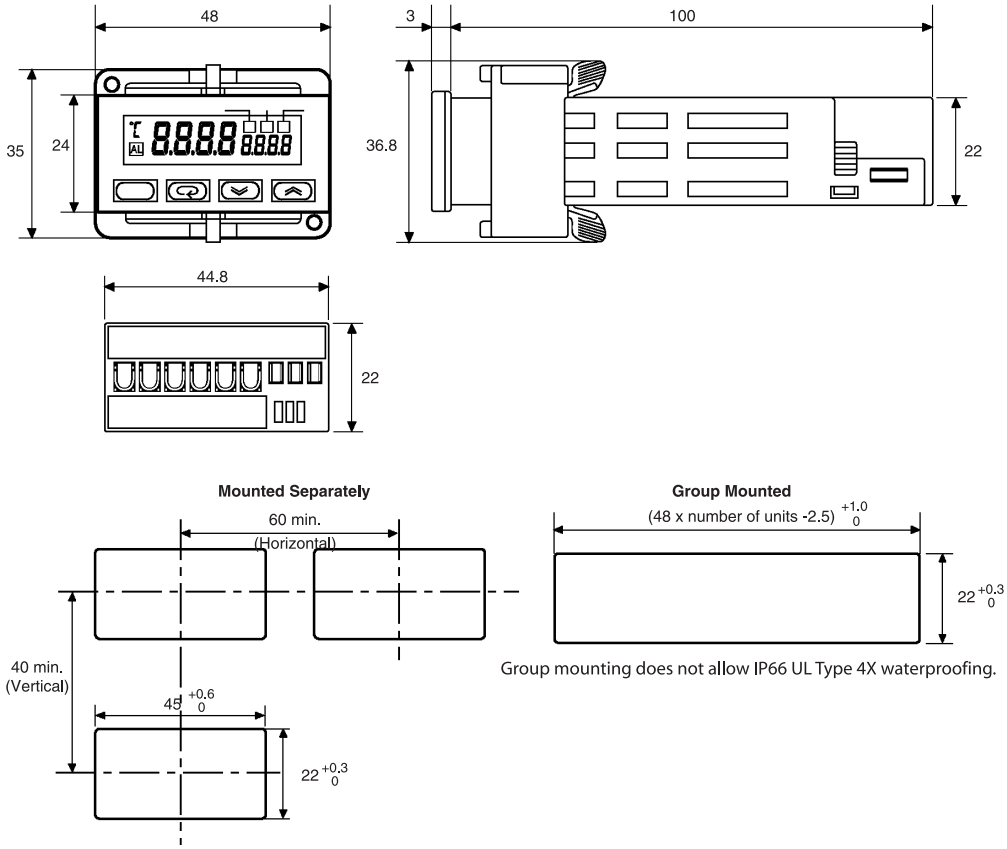
Safety Terminal Cover*



* Conforms to VDE 0106 (finger protection) when installed on the controller.

Approximate dimensions are shown in millimeters unless otherwise indicated (to convert to inches, multiply by 0.0394). Dimensions are not to be used for manufacturing purposes.

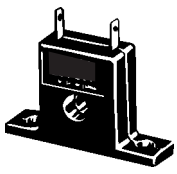
Bulletin 900-TC32

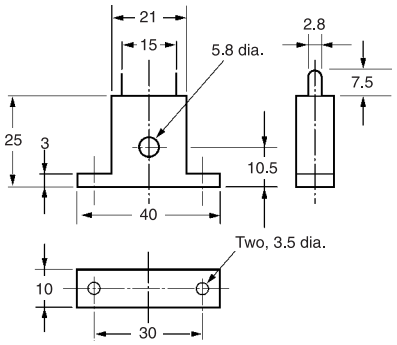


Panel Cutouts

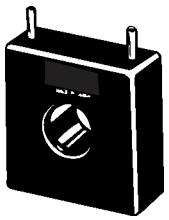
- Recommended panel thickness is 1…5 mm.
- When carrying out maintenance on the unit, the I/O wiring terminal block can be removed from the module with the terminal leads still attached.
- Group mounting is not possible in the vertical direction. (Maintain the specified mounting space between controllers when they are group mounted. IP66 UL Type 4X is not possible when group mounting.)
- To mount the unit so that it is waterproof, apply the waterproof gasket to the unit.
- When two or more units are mounted together, make sure that the surrounding ambient temperature does not exceed the allowable operating temperature specification.

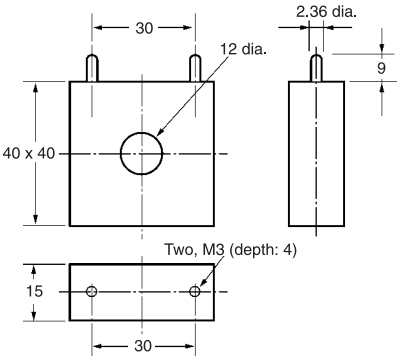
Current Transformer (Sold Separately) (Bulletins 900-TC8 and 900-TC16 Only)





Cat. No. 900-CT1





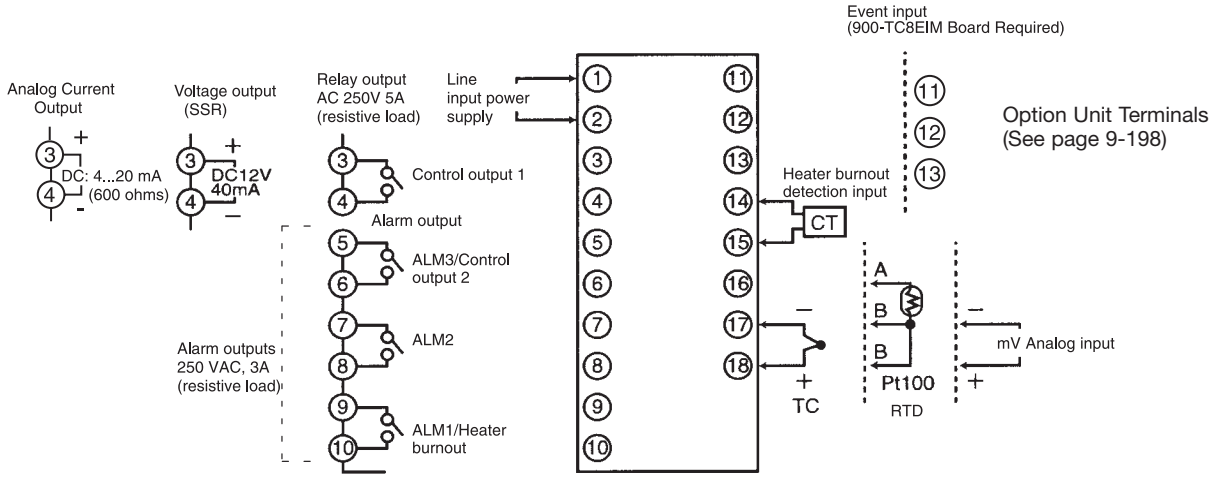
Cat. No. 900-CT2

Note: The hole diameter is the major functional difference between the Cat. No. 900-CT1 and the Cat. No. 900-CT2. The current output signal is the same.

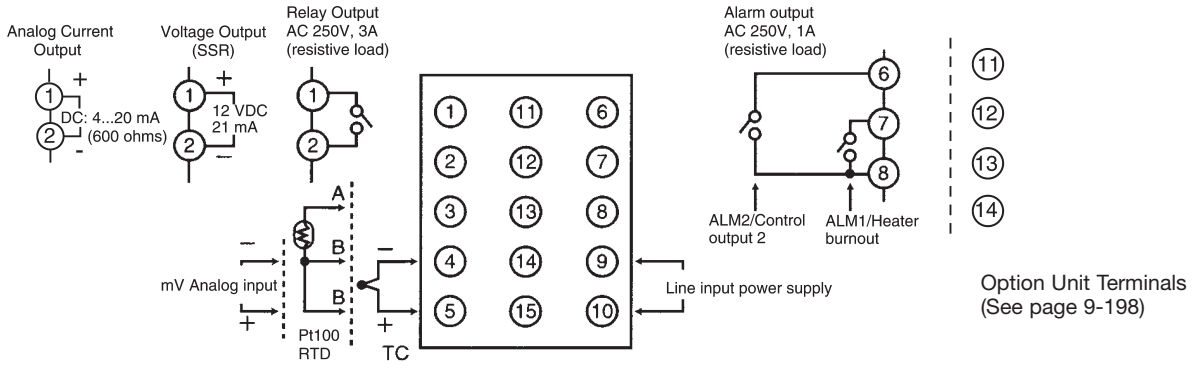
- The voltage output (SSR control output) is not electrically isolated from the controller's internal circuits. When using a grounded thermocouple, do not connect the control output terminals to earth ground. If the control output terminals are connected to earth ground, errors will occur in the measured temperature values as a result of ground loop leakage current.
- Standard insulation is applied to the power supply I/O sections. If reinforced insulation is required, connect the input and output terminals to a device without any exposed current-carrying parts or to a device with standard insulation suitable for the maximum operating voltage of the power supply I/O section.

Note: Input power supply available: 100…240 V AC, or 24 V AC/DC

Bulletin 900-TC8

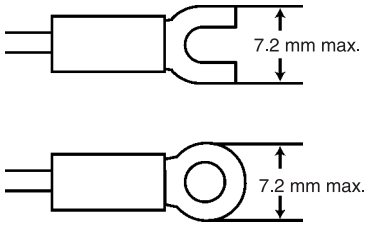


Bulletin 900-TC16



Bulletins 900-TC8 and 900-TC16

- Separate input leads and power lines to protect the Bulletin 900-TC8/900-TC16 and its lines from external noise.
- We recommend using solderless lugs when wiring to the Bulletin 900-TC8/900-TC16 wire terminals. However, if lugs are not used, the controller's screw terminals will accept two solid or stranded wires (no mixing) 14…24 AWG.
- Tighten the terminal screws using a torque 1.13…1.36 Nm (10…12 lb-in).
- Use the following type of solderless lugs for M3.5 screws.



Wiring Terminals, Continued

- The voltage output (SSR control output) is not electrically isolated from the controller's internal circuits. When using a grounded thermocouple, do not connect the control output terminals to earth ground. If the control output terminals are connected to earth ground, errors will occur in the measured temperature values as a result of ground loop leakage current.
- Standard insulation is applied to the power supply I/O sections. If reinforced insulation is required, connect the input and output terminals to a device without any exposed current-carrying parts or to a device with standard insulation suitable for the maximum operating voltage of the power supply I/O section.

Note: Input power supply available: 100…240 V AC, or 24 V AC/DC

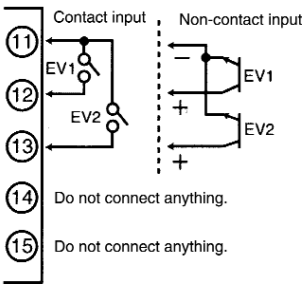
Event Input/Heater Burnout Detection

Cat. No. 900-TC16ACEIM Event Input Unit

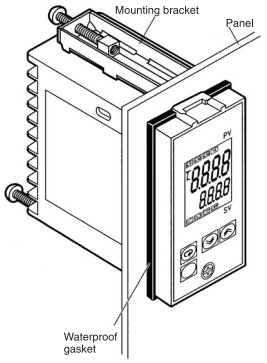


§ Typically, an RS-232 to RS-485 converter such as the Cat. No. 900-CONVZ25 (see page 9-203) will be required between the personal computer (with 900Builder software) and the Bulletin 900-TCx controller. RS-485 allows linking up to 31 controllers with a single personal computer.

Bulletin 900-TC8

Panel Mounting

1. Insert the Bulletin 900-TC8 into the mounting hole in the panel from the front. Ensure the waterproof gasket is in place if this is a UL Type 4X enclosure.
2. Push the mounting bracket along the Bulletin 900-TC8 body from the rear terminals up to the panel, and secure it temporarily.
3. Tighten the screw on each mounting bracket alternately until the ratchet stops tightening.

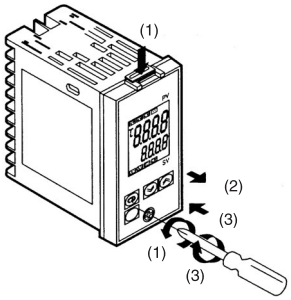


Bulletin 900-TC8

Removing the Unit from its Case

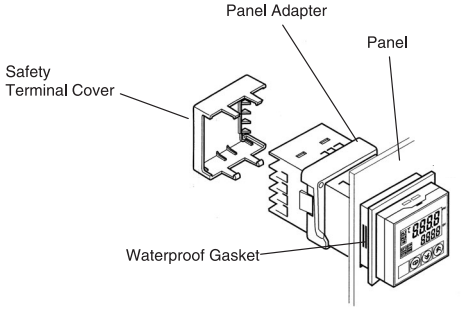
To remove the Bulletin 900-TC8 unit from its case whether it is mounted in a panel or not, use a suitable Phillips screwdriver for the screw located at the bottom on the front of the case.

1. While pressing down on the hook located at the top of the case front, turn the screw (located at the bottom on the front) counterclockwise using a Phillips screwdriver.
2. Hold both sides of the front case and draw out the unit towards you. With the unit removed, option boards can be installed or replaced.
3. When replacing/inserting the unit into the case/panel, confirm that the waterproof gasket is in place. While pressing down on the hook located at the top of the front case, turn the screw (located at the bottom on the front) clockwise using a Phillips screwdriver and tighten to a torque of 0.3…0.5 N•m (2.66…4.43 lb•in). Make sure that electronic parts do not come in contact with the case.



Bulletin 900-TC16

Panel Mounting



Mounting the Bulletin 900-TC16 in a Panel/Enclosure

1. Insert the Bulletin 900-TC16 into the mounting hole in the panel. Ensure the waterproof gasket is in place if this is a IP66 UL Type 4X enclosure.
2. Push the panel adapter along the Bulletin 900-TC16 body from the rear terminals up to the panel, and secure it temporarily.
3. Tighten the two screws on the adapter. When tightening the two screws, tighten them alternately, keeping the torque to 0.29…0.39 N•m (2.57…3.45 lb•in).

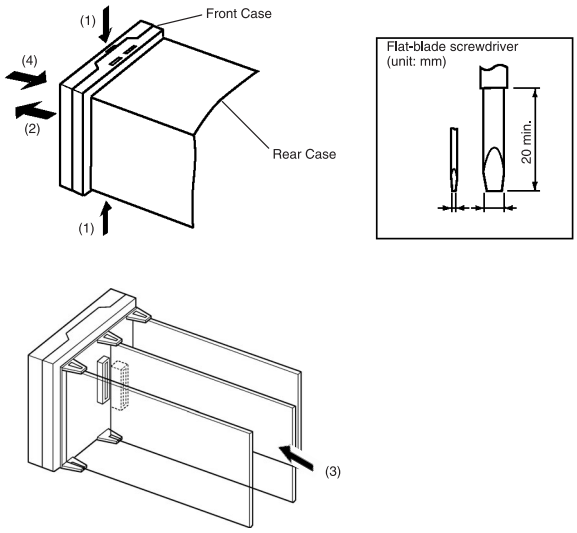
Attaching the Safety Terminal Cover

Make sure that the UP arrow mark is facing up, and then fit the terminal cover into the holes on the top and bottom of the controller. All Bulletin 900-TC16 controllers are provided with a terminal cover.

Installing the Option Units

If communications, event input, or heater burnout functions are required, mount the applicable option unit into the controller. The heater burnout function is supported on either the 900-TC16EIM or 900-TC16COM units. One option unit (max.) per controller.

Assembly Directions

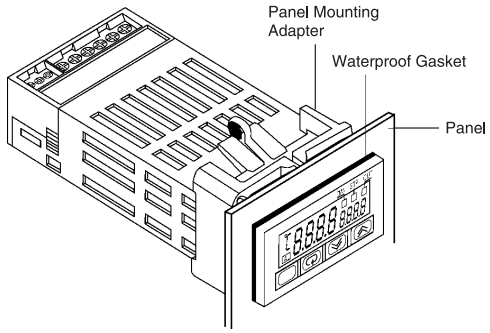


1. Insert the tools (see drawing above) into the slots (one on the top and one on the bottom) and release the case hooks.
2. Insert the tool in the space between the front and rear case selections and slightly pull out the front case. Hold the top and bottom of the front case and pull it toward yourself to remove it.
3. Mount the option unit in the center position. Match the upper and lower option unit (board) retaining claws with the connection points and insert/lock the option unit in place.
4. Before inserting the unit into the panel/enclosure, confirm that the waterproof gasket is in place. Insert the front case into the rear case until you hear a click. When inserting the front case, press down the hooks on the top and bottom of the rear case so that they firmly hook together. Make sure that electronic parts do not come in contact with the case.

Bulletin 900-TC32

Panel Mounting

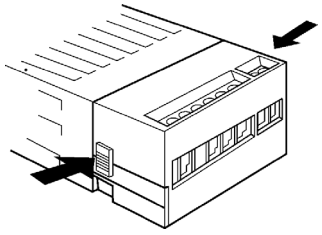
1. Insert the Bulletin 900-TC32 into the mounting hole in the panel from the front. Ensure the waterproof gasket is in place if this is a IP66 UL Type 4X enclosure.
2. Push the panel mounting adapter along the Bulletin 900-TC32 body from the rear terminals up to the panel, and secure it temporarily.
3. Tighten the two screws on the adapter. When tightening the two screws, tighten them alternately, keeping the torque to within approximately 0.29…0.39 N•m (2.57…3.45 lb•in).



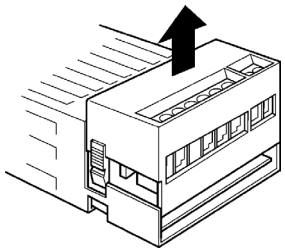
Removing and Attaching the Wiring Terminal Cover Plate

A damaged Bulletin 900-TC32 can quickly be replaced by removing the field terminal plate.

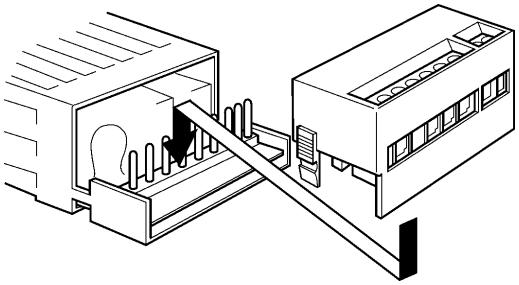
1. Press in firmly on the fasteners at both sides of the terminals to unlock the terminal plate and pull it upwards.



2. Remove the terminal plate with the field wires attached.



3. Before you replace/insert the terminal plate on the replacement Bulletin 900-TC32, make sure that the pins match the positions of the holes in the terminal plate, and press it into place on the controller.



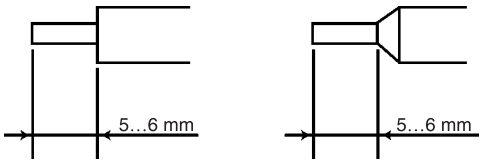
Wiring Precautions

Bulletin 900-TC32

Connect the terminals as specified below.

Terminal No.	Cables	Pin Terminals
1…6	AWG24…14	2.1 dia. max.
7…9	AWG28…22	1.3 dia. max.

The exposed current-carrying part to be inserted into terminals must be 5…6 mm.



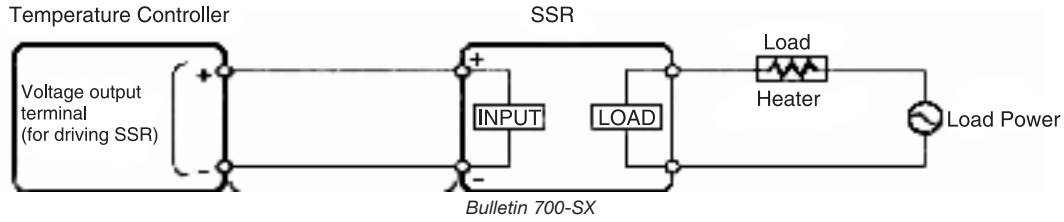
Electrical wire Pin terminal

Tighten the terminal screws to the torque specified below.

Terminal No.	Screw	Maximum Tightening Torque
1…6	M2.6	0.23…0.25 N•m (2.04…2.21 lb•in)
7…9	M2	0.12…0.14 N•m (1.06…1.24 lb•in)

Temperature Controller Connection to a Solid-State Relay (SSR)

The 12V DC output of a temperature controller is typically used to interface to an SSR, such as the Allen-Bradley Bulletin 700-Sx line. An SSR provides high current (e.g., 40 A) switching capability plus longer life than a mechanical relay. See the Relays and Timers Selection Guide (Publication 700-SG003B-EN-P) for additional information.



Bulletin 700-SX

Controller Configuration from Keypad

Controller configuration of parameters can be done using the four keys on the bottom of the controller along with the two LED displays. The configuration system is structured, which means a set path must be followed to get from one parameter to another.
User manuals, which provide details about configuring the Bulletin 900-TCx controllers, are available on-line at the Automation Bookstore web site http://www.ab.theautomationbookstore.com:

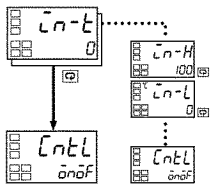
- Bulletin 900-TC8: Publication 900-UM002B-EN-E
- Bulletin 900-TC16: Publication 900-UM001B-EN-E
- Bulletin 900-TC32: Publication 900-UM003B-EN-E

Initial Setup, ON/OFF Control

The following is an example of the structure to alter the configuration of a controller parameter.
Note: On the Bulletin 900-TC8/900-TC32, the ⊙ key is the ⇦ M key.

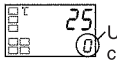
Typical Application Example

Changing Parameters



Indicates that there is a parameter. Keep on pressing the mode key until the desired parameter is selected.

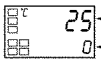
Changing Set Values



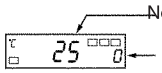
Use the ⩔ or ⩓ keys to change the set value displayed in the setup menu.

Display

No. 1 display
No. 2 display
900-TC8



No. 1 display
No. 2 display
900-TC16

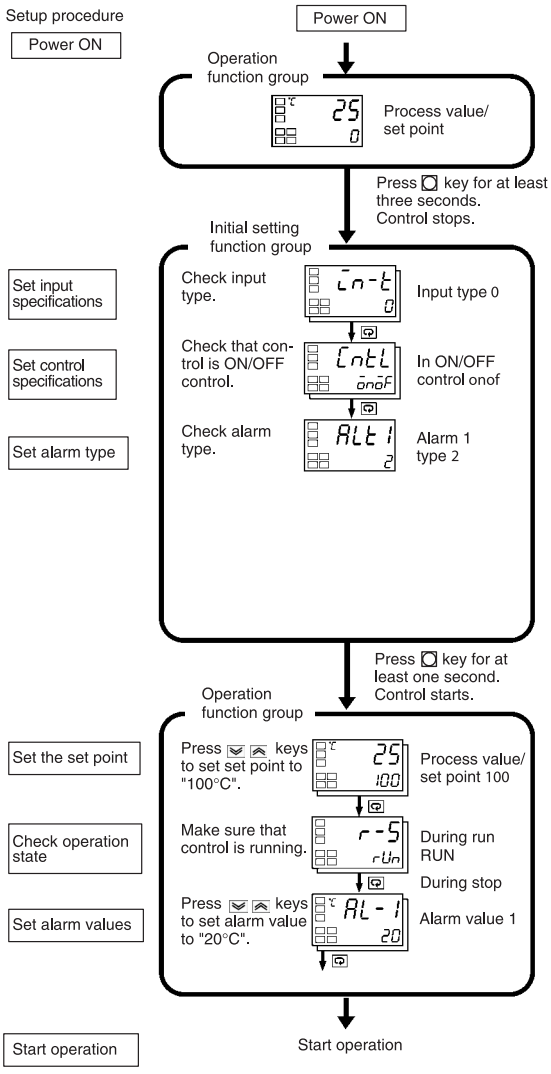


No. 1 display
No. 2 display
900-TC32

Typical Example

Input type:	0 K thermocouple -200…1300°C
Control method:	ON/OFF control
Alarm type:	2 upper limit
Alarm value 1:	20°C (For setting deviation)
Set point:	100°C

Change only the alarm value 1 and set point.
The rest must be left as default settings.



Interface Converter

Product Overview/Specifications

Bulletin 900 — Interface Converter

- Enables RS-232 or USB ∗ (ser. B or later converter) to RS-485 Communications between a Personal Computer (PC) using 900Builder™ Software and up to 31 Bulletin 900-TCx Controllers — Ideal for Industrial Applications
- All Signal Lines have 1500V AC Insulation at the RS-232C (USB: 500 V AC) and RS-485 Sides Using Opto-Couples; Power Supply Lines have 1500V AC Insulation Using a Transformer
- Diagnostic LEDs Indicate Power Available and Active Data Transmission
- On-Board Wiring and Data Configuration Diagrams Simplify Startup
- DIN Rail or Panel Mountable
- cURus, CE

∗ Requires loading free software into PC. Available at the Allen-Bradley web site http://www.ab.com/industrialcontrols/products/Temp_controls/index.html.

Standard Models

Bulletin No.	Size	Power Supply Voltage	Cat. No.
900-CONV†	30 mm (W) x 80 mm (H) x 78 mm (D)	100…240V AC	900-CONVZ25
		24V AC/DC	900-CONVU25

† Converts personal computer RS-232/USB communications to RS-485. Use for interface with a single Bulletin 900-TCx, or multiple (up to 31) controllers with RS-485 communications.

Specifications

Technical/Control Ratings				
Communications Method	Master Device (PC)		RS-232C	
	Slave Device (900-TCx Controller)		RS-485 (2-wire, half duplex) (selectable)	
Synchronization Method			Start-stop synchronization	
Master Device (PC)	RS-232C Interface	Max. transmission distance	15 m	
		Max. number of connectable units	1 unit	
	USB Interface	Max. transmission distance	5 m or when the total time (hub delay time plus the cable delay time) is less than or equal to 70 ns	
		Max. number of connectable slave units	1 unit	
		USB Standard	V1.1	
Slave Device (900-TCx) RS-485 Interface		Max. transmission distance	500 m	
		Max. number of connectable slave units	31 units (for multi-drop connection)	
Baud Rate			1200/2400/4800/9600/19 200/38 400 bps (Default setting: 9600)	
Data Bit Length			7 or 8 bits (Default setting: 7)	
Stop Bit Length			1 or 2 bits (Default setting: 2)	
Communications Parity			None, even, odd (Default setting: Even)	
Echoback Selection			Echoback: With/without (Default setting: Without)	
Selection Switch Response Delay			Approx. 30 ms	
General/Environmental Ratings				
Supply Voltage			100…240V AC, 50/60 Hz	24 V AC, 50/60 Hz or 24 V DC
Operating Voltage Range			85…110% of rated supply voltage	
Power Consumption			5 VA max.	24 V AC: 3 VA max., 24 V DC: 3 W max.
Ambient Temperature		RS-232C	–10…+55 °C (with no icing)	
		USB	0...+55 °C (with no icing)	
Ambient Humidity			25…85% (with no condensation)	
Storage Temperature			–20…+65 °C	

Specifications, Continued

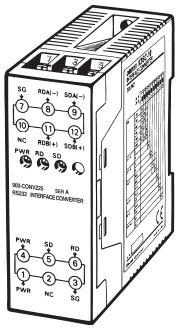
General/Environmental Ratings			
Insulation Resistance			20 MΩ min. measured at 500V DC between the following: External terminals ↔ casing RS-232C terminals ↔ RS-485 terminals power supply terminals
	Isolation Method	Communications	Phototransistor coupler
		Power supply	Isolating transformer
Dielectric Strength			1,500 V AC for 1 min. between the external terminal and case, and between the RS-232C RS-485 block power supply terminal
Noise Immunity			500 V AC for 1 min. between the RS-232C/USB block and RS-485 block
Vibration (Max.)			10…55 Hz, 0.5 mm single amplitude for 10 min. each in X, Y, and Z directions (1 G)
Shock (Max.)			98 m/s² (10 G), 3 times each in X, Y, and Z directions
Weight			Approx. 150 g
Enclosure Rating	Front Panel Operation Parts		Conforms to IEC standards, equivalent to IP20 (when terminal cover mounted) ∗
	Terminals		Equivalent to VDE 0106/100 (when terminal cover mounted) ∗
Memory Protection			No protective functions (communications data is not protected for power interruptions during communications)
EMC	Radiated Emission		EN61326 class A
	Conducted Emission		EN61326 class A
	Immunity ESD		EN61000-4-2: 4 kV contact discharge (level 2); 8 kV air discharge (level 3)
	Immunity RF-Interference		EN61000-4-3: 10V/m (amplitude modulated, 80 MHz…1 GHz) (level 3) 10V/m (pulse modulated, 900 MHz)
	Immunity Conducted Disturbance		EN61000-4-6: 10V (0.15…80 MHz) (level 3)
	Immunity Burst		EN61000-4-3: 2 kV power-line (level 3); 2 kV I/O signal-line (level 4)
Conformity to Standards			UL508, CSA C22.2 No. 14-95 Conforms to EN50081-2, EN50082-2, EN61010-1 (IEC 61010-1) Conforms to VDE 0106/part 100 (Finger Protection), when the terminal cover is mounted.

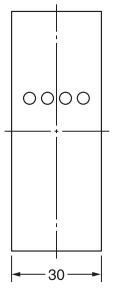
∗ When USB communication is used, the cover must be removed

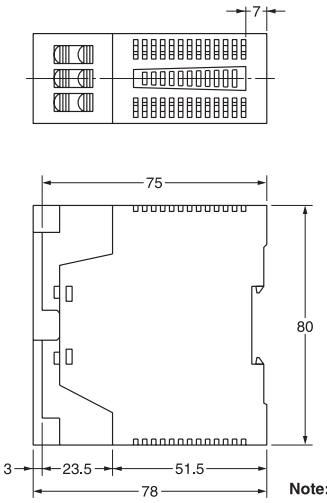
Approximate Dimensions

Approximate dimensions are shown in millimeters unless otherwise indicated (to convert to inches, multiply by 0.0394). Dimensions are not to be used for manufacturing purposes.

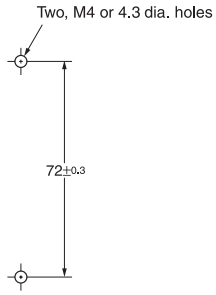
Cat. No. 900-CONVZ25





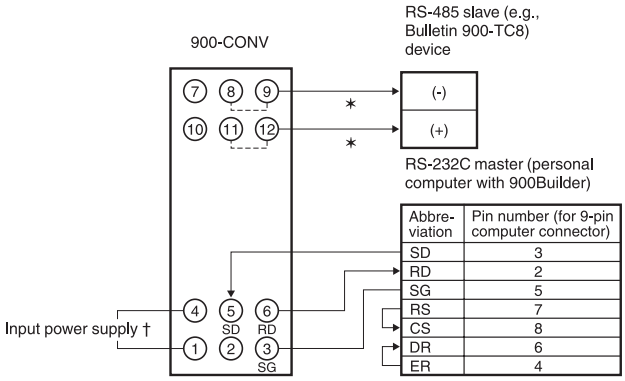


Mounting Hole Dimensions (For Direct Mounting)



Note: DIN rail mounting is also possible.

RS-485 Connection



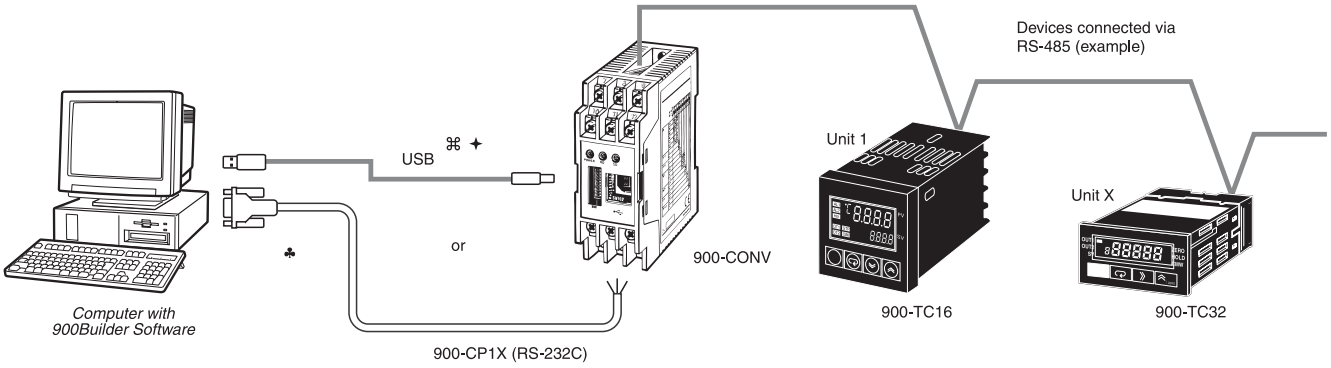
∗ If RS-485 is selected as the communications method (i.e., pin 9 of the DIP switch is set to OFF), terminals 8 and 9, and terminals 11 and 12 are connected internally.
† A 100…240 V AC, 24 V AC, or 24 V DC (not polarity sensitive) input power supply is required.

Function	Terminal Number	Name	Signal Direction	Explanation
For connecting the operating power supply	1 and 4	PWR	—	100…240V AC or 24 V AC/DC model
Connection terminals for RS-232C communications with master device (DIP switch pin 8: OFF)	3	SG	—	Connect to signal ground.
	5	SD	Input	Receives data from SD of the master device.
	6	RD	Output	Sends data to RD of the master device.
Used for RS-485 communications with slave device (DIP switch pin 9: OFF)	8	RDA (–)	Input/ output	SD and RD for RS-485 (cold side) Terminals 8 and 9 are connected internally when pin 9 of the DIP switch is set to OFF.
	9	SDA (–)		
	11	RDB (+)	Input/ output	SD and RD for RS-485 (hot side) Terminals 11 and 12 are connected internally when pin 9 of the DIP switch is set to OFF.
	12	SDB (+)		

Note: Terminals 2 and 10 are not used.

Connection to an RS-232C Master Device

Set the same communications conditions (baud rate, stop bits, data length, and parity) for the master device, the Interface Converter, and slave devices.



‡ With RS-485 communications, connect a terminating resistance (120Ω, 1/2 W recommended) to both ends of the communications link/network.
§ The Bulletin 900-TCx communications number must be set.
♣ A pre-fabricated 3 m RS-232 cable with a 9-pin female D-shell connector on one end and three flying leads at the other is available from Allen-Bradley (Cat. No. 900-CP1X).
➤ RS-485 allows connecting 32 devices.
⌘ Use a commercially available USB cable
✦ To use the USB mode requires the download of “free” software into your PC. This software can be found at the following website:
the Allen-Bradley web site http://www.ab.com/industrialcontrols/temp_control/index.html
Once at this site, go to “Get Software” (upper right of screen) and click on “Virtual Communications Port USB Driver” and follow the instructions.

Terminal Specifications

Make sure to check the input and output specifications for the signal pins of connected devices before connecting the terminals.

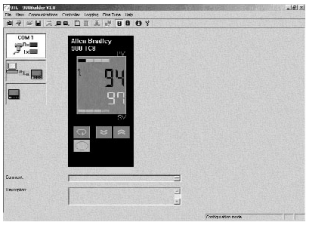
Caution: Make sure to use the Bulletin 900-CONV with the terminal cover mounted when using in machinery that must conform to EN/IEC standards.

900Builder™ Software

Product Overview/Product Selection



Bulletin 900 — 900Builder™ Personal Computer (PC) Configuration Software for Bulletin 900-TCx Temperature Controllers

- Provides a Graphic Configuration Option to Using the Controller's On-Board Keypad and Displays
- Simplifies Controller Configuration by Use of Fill-in-the-Blank Menus
- On-Line Monitoring of Parameters by Controller Simulated Graphic or Bar Chart Faceplates
- Provides Data-Logging and Graphic Trending Feature
- Uses Microsoft® Windows® Environment to Allow Viewing Multiple Applications Simultaneously
- ActiveX Feature Allows Saving Parameters for Use by Other Windows® Applications Such as Excel
- RS-232 Direct Connection to Bulletin 900-TC8 with Bulletin 900-TC8232 Option Unit
- RS-485 Connection with up to 31 Controllers via Bulletin 900-CONV RS-232/RS-485 Converter Module
- Rev. 1.1 supports analog output and 24 V AC/DC controllers

Product Selection

Product Name/Description	Cat. No.
900Builder™ Personal Computer Configuration Software for Bulletin 900-TCx Temperature Controllers (available in CD format only)	900-BLDSW1

Computer Hardware Requirements

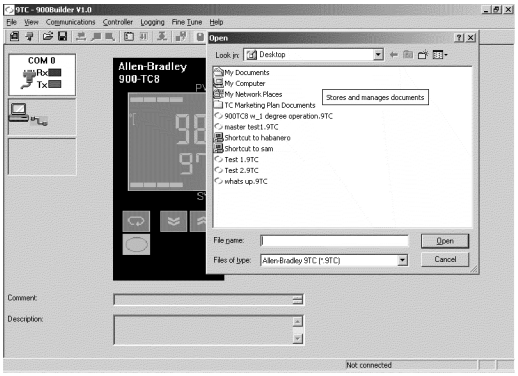
The 1.0 release requires a PC with the following minimum specification:

- Pentium® P90
- 16MB RAM, 32 recommended
- 15MB free disk space
- CD-ROM Drive (4x speed, with 32 bit device driver) (optional)
- SVGA resolution monitor (800 x 600)
- Microsoft® Windows®-supported mouse
- Microsoft® Windows®-supported printer (optional)
- Free serial 9-pin COM Port for connection to controller or RS-232 to RS-485 converter (Bulletin 900-CONV) (required for configuration)

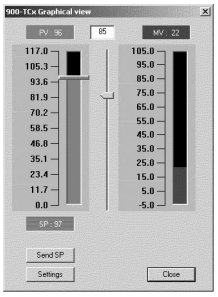
Computer Operating System Requirements

Either of the following operating systems can be used with 900Builder

- Microsoft® Windows® 95
- Microsoft® Windows® 98
- Microsoft® Windows NT® 4.0 (service pack 6)
- Microsoft® Windows® 2000



- Store parameters to PC memory or disk
- Retrieve parameters from PC memory or disk
- On-line help
- Communications active display



- Faceplate display with active bar graph for real-time monitoring
- Parameters also displayed data value format for precise indication
- Colors can be modified to meet the application
- Slider tool (center of graphic) allows on-line set point change

in complete control of power

INTRODUCTION AND CATALOGUE INDEX

Since our establishment in 1984 ETE has constantly strived to match the fast pace of technical and commercial changes in the UK controls ,automation, and machine building markets.We have designed and developed distinctive ranges of transformers for these prime markets. At the forefront of our thinking are products that are technically advanced and competitively priced.

We offer over 150 standard 'stock transformer lines' and we back this up with rapid delivery options for bespoke units that require special design criteria.

To enhance our appeal to our widening customer base ETE has introduced complementary power products to add to our port folio.

We now stock one of the most comprehensive and competitive ranges of DIN rail power supplies in the whole UK.

These and other important power products are listed below.

Page 1 Stock range of single phase transformers from 25VA to 7.5kVA
Page 2 Custom built range of single phase transformers up to 30kVA open or enclosed
Page 3 Custom built range of three phase transformers up to 100kVA open or enclosed
Page 4 Heat loss data for Class F,E and A 1ph transformers and IP65/Ex single phase transformers
Page 5 Custom built 3 phase, auto wound, motor starting transformers open or enclosed
Page 6 Custom built dry type, cast resin type and oil cooled 3 phase transformers up to 10MVA
Page 7 Custom built toroidal transformers from 30VA to 1.5kVA + Slimtran toroidals from 50VA to 500VA
Page 8 Custom built PCB transformers 1VA- 43.5VA and chassis mounted transformers 6VA to 300VA
Page 9 Custom built single and three phase enclosed transformers with accessories
Page 10 Stock range of portable transformers, single and 3 phase site range and custom built units

STOCK RANGE OF SINGLE PHASE TRANSFORMERS
RATINGS FROM 25VA TO 7.5kVA

Ex stock for next day delivery

Multi voltage and single voltage options
High specification

Easy to install and with a DIN rail mounting option up to 150VA

Designed to EN 60 742

A comprehensive range of single phase stock transformers from 25VA to 7.5KVA.
The MV multi- voltage range is designed to meet various voltage requirements .
The SV simplified range is designed for applications requiring only a single input voltage and a single output voltage and can be supplied fitted with either integral input or output fuses.
All transformers are air cooled to class E (120 deg C) and are fully varnish impregnated with a class F polyester varnish .
Connections are via high specification touch proof terminals giving both a compact design and ease of installation .
Fixing centres are designed to give easy access to fixing slots .
A full range of ventilated enclosures is available for all sizes.

CUSTOM BUILT RANGE OF SINGLE PHASE TRANSFORMERS FROM 25VA TO 30KVA OPEN OR ENCLOSED

Fast delivery for urgent requirements

Two day, within five working days and standard delivery options

Designed to EN 60 742

Easy to install with DIN rail option up to 150VA

Enclosures available for all sizes

A comprehensive range of custom built single phase transformers designed specifically to customer own requirements.
Any quantity can be produced, from single units to regular call-off orders.
Sizes from 25VA to 15KVA (SE 25-SE 15000) are designed with Class E (120 deg C) materials with an additional option of Class F (155 deg C) designs from 500VA to 30KVA (SF 500 -SF 30000).
All transformers are air cooled and are fully varnish impregnated with an aesthetically appealing polyester varnish .Connections are via high specification touch proof terminals giving both a compact design and ease of wiring.Fixing centres are designed to give easy access to fixing slots to speed installation.
A full range of ventilated enclosures is available for all sizes with IP 65 enclosures available on request.
Sizes from 25VA to 150VA can be fitted with 'easy fit' DIN rail fixing brackets if required.
Variations include specific input and output voltages , multiple input and output windings and in-built overload and short circuit protection using in-built fuses and/or thermal protectors.
Special customised designs can be produced to meet various international standards.
Please contact our sales and design department to discuss your requirements or for more information .

STANDARD SPECIFICATION
Ambient temperature range from -10 deg C to + 35 deg C
Generally to EN 60 742
Double wound air cooled

CUSTOM BUILT RANGE OF THREE PHASE TRANSFORMERS FROM 120VA TO 100KVA OPEN OR ENCLOSED

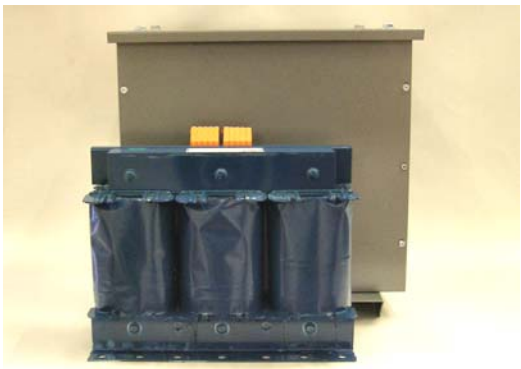
Fast delivery for urgent requirements

Two day, within five working days and standard delivery options

Designed to EN 60 742

Low profile option available on request

Enclosures available for all sizes



A comprehensive range of custom built three phase transformers designed specifically to customer own requirements.
Any quantity can be produced from single units to regular call-off orders.
Sizes from 120VA to 50KVA (TE 120-TE 50000) are designed with Class E (120 deg C) materials with an additional option of Class F (155 deg C) designs from 2KVA to 100KVA (TF 2000-TF 100000).
All transformers are air cooled and are fully varnish impregnated with an aesthetically appealing polyester varnish. Connections are via high specification touch proof terminals giving both a compact design and ease of wiring. DIN rail mounted terminals are used for currents exceeding 50 amps.
Fixing brackets are secured through the transformer core giving a compact and robust design .Fixing centres are designed to give easy access to fixing slots for ease of installation.
A low profile range of units are also available where height restrictions are necessary. Dimensions are available on request.
All windings are wound on robust glass reinforced bobbins to DIN 41 305 to give both a high electrical strength and a high quality construction.
A full range of ventilated enclosures is available for all sizes , as shown, with IP65 enclosures available on request.
Variations include specific input and output voltages , multiple input and output windings and in-built overload and short circuit protection using in-built fuses and/or thermal protectors. Special customised designs can be produced to meet various international standards.
Please contact our sales and design department to discuss your requirements or for more information .

STANDARD SPECIFICATION
Ambient temperature range from -10 deg C to + 35 deg C
Generally to EN 60 742
Double wound air cooled

HEAT LOSS DATA FOR SINGLE PHASE TRANSFORMERS IN CLASSES F, E & A & HIGH EFFICIENCY SINGLE PHASE TRANSFORMERS FOR IP65 AND Ex ENCLOSURES

Losses for Class F (155 deg C) transformers

Losses for Class E (120 deg C) transformers

Losses for Class A (105 deg C) transformers
With frame size data

Losses for IP65 or for Ex enclosed transformers
With frame size data

The data shown is provided to help design engineers select the correct insulation classification for transformers. The heat loss data is important when transformers are fully enclosed or housed in confined control panel situations.

Standard stock transformers are Class E insulation (shown on page 1).
Standard custom built single and three phase transformers are either Class E or Class F insulation (shown on pages 2-3).

Non standard Class A insulation (105 deg C) transformers are for lower watts loss per VA.
Class A designs are suitable for UL requirements utilising all approved UL registered and approved materials.

To allow transformers to be enclosed in IP65 or Ex rated cabinets high grade Grain Oriented core materials are used.
Selection of enclosure must be based on the heat loss data provided.

Definitions and data

Insulation class	Coding	Temperature rating	Maximum temperature rise	Maximum ambient temperature
Class F	SF	155 deg C	115 deg C	35 deg C
Class E	SE	120 deg C	85 deg C	35 deg C
Class A	SA	105 deg C	70 deg C	35 deg C

High efficiency types for IP65 or Ex enclosure (Ex,IP65) For guidance only, for specific applications contact our sales

C– Core losses are at nominal input voltage **W– Winding losses (approximate) are at full load**

CUSTOM BUILT 3 PHASE AUTO WOUND MOTOR STARTING TRANSFORMERS OPEN OR ENCLOSED TYPES

Class E or Class F options

2-6 starts per hour,7-15 starts per hour and 16-40 starts per hour

Maximum run up/start time 45 seconds
Minimum tapping 40%

Open type or enclosed types

Two ranges of either Class E (120 deg C) or Class F (155 deg C) auto wound motor starting transformers. These units are custom built and can be supplied as open or enclosed units.All transformers are air cooled and are fully varnish impregnated with a class F varnish finish.Connections are via high current, non rotating stud terminals.These connections are shrouded with a cover plate . Fixing centres are designed to give easy access to fixing slots to speed installation. Heat sensors or thermal cut outs can be fitted to each winding. A full range of ventilated enclosures is available, see page 32 for details.

Please contact our sales and design department to discuss your specific requirements.

*** To allow for maximum height including stud terminals add 120mm**

Information required when ordering

Line/line voltage, frequency and HP or KW rating
Class of insulation (E or F) and open or enclosed type
Number of starts per hour and % voltage tappings
Thermistor or auto reset cut out fitted
Run up time if in excess of 45 seconds

CUSTOM BUILT RANGE OF DRY TYPE,CAST RESIN TYPE AND OIL COOLED THREE PHASE TRANSFORMERS UP TO 10MVA

Low and medium voltage
custom built three phase transformers

Dry type from 100kVA to 1600kVA : Up to 10kV

Cast resin type from 25kVA to 4MVA : Up to 22kV

Cast resin type from 100kVA to 4MVA : Up to 35kV

Cast resin type from 5kVA to 630kVA: Up to 22kV
Ecological design for indoor installation

Oil cooled type from 25kVA to 2500kVA : Up to 35kV

Oil cooled type from 4MVA to 10MVA : Up to 35kV

Oil cooled type from 250kVA to 630kVA : Up to 22kV
Using amorphous core material for high efficiency

To IEC 60076 and IEC 60726

A comprehensive range of low to medium voltage dry type, cast resin type and oil cooled three phase transformers from 25kVA up to 10MVA.

Dry and cast resin types are manufactured in accordance with IEC 60076 and IEC 60726. Cast resin transformers are environmentally friendly and require the minimum of maintenance.
Fire resistance is to class F1 and climatic protection is to C2. The normal ambient temperature range is up to 60 deg C. They are for indoor use and can be manufactured to IP 00 and IP 23.

Oil cooled transformers are produced in either hermetically sealed corrugated enclosures or as a non hermetically sealed construction. The coolant medium is either mineral oil, silicone oil or an ecological dielectric medium. The core material is high grade grain oriented electrical steel for optimum efficiency. A high efficiency range of transformers is also available using amorphous core materials.

Based on a long term experience in the design and testing of low to medium voltage transformers special applications can be accommodated. These include regulation transformers, furnace transformers, transformers with forced cooling , seismic resistant transformers for nuclear installations and a comprehensive range of high powered single phase units.

Transformer type	Ratings available	Construction	Voltage range
Three phase dry type	100kVA to 1600kVA	Open type to IP 00 or IP 23	Up to 10kV
Three phase cast resin type	25kVA to 4MVA	Open type to IP 00 or IP 23	Up to 22kV
Three phase cast resin type	100kVA to 4MVA	Open type to IP 00 or IP 23	Up to 35kV
Three phase cast resin type	5kVA to 630kVA	Open type to IP 00 or IP 23 : Ecological designed	Up to 22kV
Three phase oil cooled type	25kVA to 2500kVA	Hermetically or non hermetically sealed	Up to 35kV
Three phase oil cooled type	4MVA to 10MVA	Hermetically or non hermetically sealed	Up to 35kV
Three phase oil cooled type	250kVA to 630kVA	As above using amorphous core material	Up to 22kV

For more information and detailed specifications please contact our sales department

CUSTOM BUILT RANGE OF TOROIDAL TRANSFORMERS FROM 30VA TO 1.5KVA AND SLIMTRAN RANGE OF CUSTOM BUILT TOROIDAL TRANSFORMERS FROM 50VA TO 500VA

Custom built range of low profile toroidal transformers

High efficiency and low radiated magnetic field

Low profile and high VA to weight ratio

A comprehensive range of custom built toroidal transformers. All are designed and manufactured to customers' own requirements using top grade materials and employing the most advanced winding technology.
Standard designs are based around the sizes listed below but where units are required to fit into a specific area special units can be produced, all units can be fully encapsulated using a flame retardant polyester resin.

Please contact our sales department for more information.

Reference	VA	Maximum	Height	Fixing bolt	Weight
TD 30	30VA	80	30	M5	0.50
TD 50	50VA	90	40	M5	0.70

TD 1500	1.5KVA	185	80	M8	8.00

Custom built range of SlimTRAN toroidal transformers

Up to half the weight and width of conventional units

High efficiency and low radiated magnetic field

Low temperature rise

A revolutionary new range of single phase transformers from 50VA to 500VA, which are up to half the width and weight of conventional transformers.
Units from 50VA-160VA are designed for both DIN rail mounting or chassis mounting and larger units are designed for chassis mounting only. The revolutionary design combines efficiencies from over 90%, low radiated magnetic fields and low temperature rises.To the systems engineer this means the SlimTRANrange can be used along side more heat sensitive electronics.They occupy less space per VA and radiate less heat. Integral fuses can be fitted to both the input and the output windings. All units are encapsulated in high impact moulded enclosures using a polyester resin and are fitted with touch proof terminals.

For more information please contact our sales department.

STANDARD SPECIFICATION
From class A to class F insulation systems
To EN 60 742

CUSTOM BUILT RANGE OF PRINTED CIRCUIT BOARD MOUNTING TRANSFORMERS AND CUSTOM BUILT RANGE OF CHASSIS MOUNTED TRANSFORMERS FROM 6VA TO 300VA

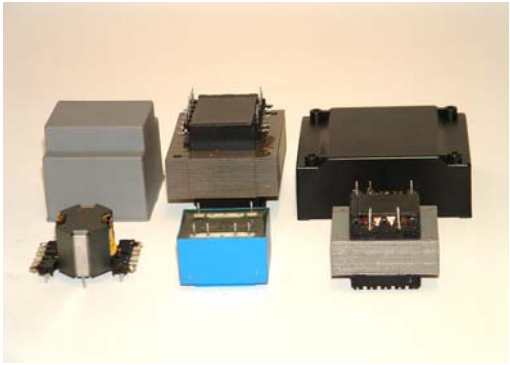
Custom built range of PCB mounting transformers

Designed for low cost volume applications

Open and fully encapsulated types

Conventional and low profile options

Ferrite cored transformers and inductors



A comprehensive range of custom built printed circuit board mounting transformers.All are designed and manufactured to customers' own requirements using top grade materials and employing the most advanced production technology.Power ratings start at 0.35VA and go up over 40VA. Approvals include EN 60742 and EN 61558. Open transformers are from 1VA to 40VA and encapsulated units are from 0.35VA to 43.5VA in conventional formats. Low profile designs are from 3VA up to 30VA.
A variety of high frequency 'ferrite core' transformers and inductors are also available upon request.

Description	Types	VA ratings	Quantity requirements
Open type PCB mounted (Imperial)	Using 5.08mm & 7.62mm grid pitch	From 1VA to 30VA	50pcs to 1000pcs
Open type PCB mounted (Metric)	Using 5.00mm grid pitch	From 1VA to 40VA	50pcs to 1000pcs
Fully encapsulated conventional PCB mounted (Metric)	Using 5.00mm grid pitch	From 0.35VA to 43.5VA	100 to over 5000 pcs
Fully encapsulated low profile PCB mounted (Metric)	Using 5.00mm grid pitch	From 3VA to 30VA	100 to over 5000 pcs
Ferrite cored switched mode transformers PCB mounted	To customer design	To customer requirements	250pcs and over
Ferrite cored inductors PCB mounted	To customer design	To customer requirements	250pcs and over
Toroidal ferrite cored inductors PCB mounted	To customer design	To customer requirements	250pcs and over
Custom design windings for PCB mounting	To customer design	To customer requirements	250pcs and over

Custom built range of chassis mounted transformers from 6VA to 300VA

Designed for low cost volume applications

Open types with solder tag or amp tag connections

Encapsulated type from 28VA to 120VA with solder tags

A comprehensive range of custom built chassis mounting transformers.All are designed and manufactured to customers' own requirements using top grade materials and employing the most advanced manufacturing technology.Ratings start at 6VA and go up to 300VA. Approvals include EN 60742 and EN 61558. Open transformers are from 6VA to 300VA and encapsulated units are from 28VA to 300VA. Various connection options are available including solder tags and push-on amp tag connections.
A variety of high frequency 'ferrite core' transformers and inductors are also available upon request.

Description	Types	VA ratings	Typical volumes
Open type with solder tags	Using two fixing wrap over clamping bracket	From 6VA to 90VA	50pcs to 1000pcs
Open type with solder tags	Using four fixing universal frames or base clamps	From 25VA to 300VA	50pcs to 1000pcs
Open type with amp tags	Using four fixing universal frames or base clamps	From 25VA to 300VA	50pcs to 1000pcs
Encapsulated type	Using multi fixing moulded cases	From 28VA to 120VA	250pcs to 5000pcs

CUSTOM BUILT SINGLE AND THREE PHASE ENCLOSED TRANSFORMERS WITH ACCESSORIES

Custom built single phase enclosed transformers with accessories

Wall/floor or portable enclosures from IP20 to IP65

With fuse, MCB or thermal protection

Accessories include: input/output plugs and sockets, wheels, cooling fans, indicator lamps, meters and mains isolator switches.

A range of custom built, single phase transformers with accessories. These can be enclosed in a variety of fixed or portable enclosures from IP20 to IP65. Transformers with non ventilated enclosures are designed with low loss cores and reduced losses in the windings. Fuse, MCB and thermal protection can be incorporated.

A wide range of accessories can be fitted including input and output plugs and sockets to many international standards, wheels for ease of movement, cooling fans, indicator lamps, a variety of metering and mains isolators switches.

To discuss your specific requirements please contact our sales department.

Custom built three phase enclosed transformers with accessories

Wall/floor or portable enclosures from IP20 to IP65

With fuse, MCB or thermal protection

Accessories include: input/output plugs and sockets, wheels, cooling fans, indicator lamps, meters and mains isolator switches.

A range of custom built, three phase transformers with accessories. These can be enclosed in a variety of fixed or portable enclosures from IP20 to IP65. Transformers with non ventilated enclosures are designed with low loss cores and reduced losses in the windings. Fuse, MCB or thermal protection can be incorporated.

A wide range of accessories can be fitted including input and output plugs and sockets to many international standards, wheels for ease of movement, cooling fans, indicator lamps, a variety of metering and mains isolators switches.

To discuss your specific requirements please contact our sales department.

Special requirements	Typical options available
Enclosed	IP 20 fixed or portable types with or without fan ventilation. Up to IP65 fixed or portable Enclosure materials include metal or polyester
Input or output protection	Fuse or MCB protection on input and/or outputs mounted inside or outside the enclosure Thermal protection of input and output windings where practical
Indicator lamps	From miniature neon or LED to 22mm panel indicators or LEDs
Metering	Digital or analogue, including voltage and current Multifunction meters for high powered, enclosed 3 ph transformers
Mains isolators	From single pole on/of switches to high current multi-pole isolator switches

A wide variety of additional accessories can be fitted on request
as well as customised designs to meet bespoke applications

PORTABLE TRANSFORMERS INCLUDING SINGLE PHASE STOCK RANGE SINGLE PHASE AND THREE PHASE SITE RANGE AND CUSTOM BUILT UNITS

Single phase stock range of portable tool transformers from 750VA to 5kVA

To EN 60 742

Full MCB protection

Double wound 230-240V input with earth screen and 110V output with centre tap taken to earth

A comprehensive stock range of single phase portable tool transformers which cover ratings from 750VA up to 5kVA.

All units are designed to EN60 742 (BS 3535) and socket outlets are to BS 4343. Input voltages are 230~240V 50Hz 1ph and the output voltage is 110V with a centre tap taken to earth. M.C.B protection is standard on all sizes.The PT range incorporates high impact, glass reinforced polyester enclosures and are supplied with a 2 metre input cable.All units up to 4kVA are fitted with a moulded 13 Amp plug for the input connection.

Reference	Tool rating	Input voltage	Protection	No.of sockets and ratings
PT 750/1	750VA	230-240V 1ph 50/60Hz	M.C.B	1 x 110V 16Amp
PT 1000/1	1kVA	230-240V 1ph 50/60Hz	M.C.B	1 x 110V 16Amp
PT 1000/2	1kVA	230-240V 1ph 50/60Hz	M.C.B	2 x 110V 16Amp
PT 1500/1	1.5kVA	230-240V 1ph 50/60Hz	M.C.B	1 x 110V 16Amp
PT 1500/2	1.5kVA	230-240V 1ph 50/60Hz	M.C.B	2 x 110V 16Amp
PT 2250/2	2.25kVA	230-240V 1ph 50/60Hz	M.C.B	2 x 110V 16Amp
PT 3300/2	3.3kVA	230-240V 1ph 50/60Hz	M.C.B	2 x 110V 16Amp
PT 4000/2	4.0kVA	230-240V 1ph 50/60Hz	M.C.B	2 x 110V 16Amp
PT 5000/2	5kVA	230-240V 1ph 50/60Hz	M.C.B	1 x 110V 16Amp and 1 x 110V 32Amp
PT 5000/3	5kVA	230-240V 1ph 50/60Hz	M.C.B	2 x 110V 16Amp and 1 x 110V 32Amp

Site transformers from 5kVA to 10kVA both 1ph and 3ph

To EN 60 742

Full MCB protection

Single and three phase double wound with earth screen and 110V centre tap taken to earth

The SES and TES ranges incorporate high quality powder coated metal enclosures with carrying handles and skid mountings for ease of movement.
A comprehensive range of site electric products, accessories and safety electric equipment is available to compliment the above transformer ranges.

Reference	Tool rating	Input voltage	Protection	No.of sockets and ratings
SES 5000/5	5kVA	230-240V 1 ph 50/60Hz	M.C.B	4 x 110V 16Amp and 1 x 110V 32Amp
SES 7500/6	7.5kVA	230-240V 1ph 50/60Hz	M.C.B	4 x 110V 16Amp and 2 x 110V 32Amp
SES 10000/6	10kVA	230-240V 1ph 50/60Hz	M.C.B	4 x 110V 16Amp and 2 x 110V 32Amp
TES 5000/5	5kVA	400-415V 3ph 50/60Hz	M.C.B	4 x 110V 16Amp and 1 x 110V 32Amp
TES 10000/6	10kVA	400-415V 3ph 50/60Hz	M.C.B	4 x 110V 16Amp and 2 x 110V 32Amp

Custom built portable transformers can be produced to order in both single and three phase options
Please contact our sales for more information

CURRENT TRANSFORMERS
STANDARD RANGES AND CUSTOM BUILT TYPES

Moulded case current transformers for DIN rail and chassis mounting
With cable and bus bar primary

To IEC 185, VDE 0414 and CEI 38-1

Range to BS 3938 with non combustible plastic case

Chassis mounted cast resin CTs

Taped CTs with screw terminals

Custom built CTs

A comprehensive range of AC current transformers in both standard and custom built formats.

Moulded case units are available in several ranges in both DIN rail and chassis mounting types. These can be used for current measurement via either cables or bus bars. The construction is in accordance with IEC 185, VDE 0414 and CEI 38-1.

A full range of units is available to BS 3938 utilising a non combustible plastic casing. Chassis mounted, cast resin CTs and taped CTs with screw connections are also available.

To complement the standard ranges bespoke units can be produced to customer own requirements.

Series	Range	Primary	Class	Fixing	Terminals	Construction
TAF series	From 5A to 1000A	Cable and bus bar	0.5 to 1.0	DIN rail and chassis mounted	Push on amp tags	Moulded case
TAC series	From 5A to 150A	Cable and bus bar	0.5 to 1.0	DIN rail and chassis mounted	Push on amp tags	Moulded case
TAB series	From 5A to 1000A	Cable and bus bar	0.5 to 1.0	DIN rail and chassis mounted	Screw terminals	Moulded case
CTP series	From 50A to 2000A	Bus bar	0.5 to 1.0	Chassis mounted and bus bar mounted	Screw terminals	Moulded case
SCT series	From 50A to 3000A	Bus bar	0.5 to 1.0	Chassis mounted	Screw terminals	Moulded case
MFO series	From 50A to 3000A	Bus bar	1.0	Chassis mounted and bus bar mounted	Screw terminals	Moulded case
ECT series	From 30A to 300A	Cable or cable with tags	0.2, 0.5s, 0.5 and 1.0	Chassis mounted	Screw terminals	Cast resin
RCT series	From 20A to 3000A	Cable	1.0	Chassis mounted	Screw terminals	Moulded case
MR series	From 30A to 5000A	Cable or bus bar	0.5, 1.0 and 3.0	None	Screw terminals	Taped

Custom built current transformers can be designed to special requirements

 For detailed information or data sheets on standard ranges please contact our sales department

SINGLE AND THREE PHASE VARIABLE AUTO TRANSFORMERS
OPEN AND ENCLOSED TYPES

Standard single & 3 phase ranges from 1 amp to 28 amps

Standard input 240V 50Hz, output 0….270V 50Hz 1ph
& 415V 50Hz, output 0….470V 50Hz 3ph

High efficiency with no output voltage distortion
Ambient temperature rating up to 45 deg C

Long life, high quality wiper design
Open or enclosed versions

A comprehensive range of single and 3 phase phase variable auto transformers covering ratings from 1 amp to 28 amps per phase. Used for the variable control of voltages from 0 to 270V 1ph and 0 to 470V 3ph with low power losses.Units can be supplied as either open or enclosed types with the option of double wound transfomers to give total isolation.
Also units can be supplied to give a variable DC output via a bridge rectifier and motor drive options are also available.Larger units can be supplied by paralleling two or more stacked versions and all types can be fully protected from overload and short circuits. They can also be fitted with full metering if required.
The unique silver or nickle plated wiper path design gives high reliability and long life. All windings are wound on high quality low loss toroidal cores giving efficiencies up to 98%.

Wide ranges of other non standard voltages, currents and power ratings available
Motor drive option available

OPEN OR ENCLOSED CUSTOM BUILT SINGLE & 3PH PHASE AUTO TRANSFORMERS IN CLASSES A, E, F AND FOR IP65/Ex ENCLOSURES

Custom built single and three phase auto transformers
Either open or enclosed types

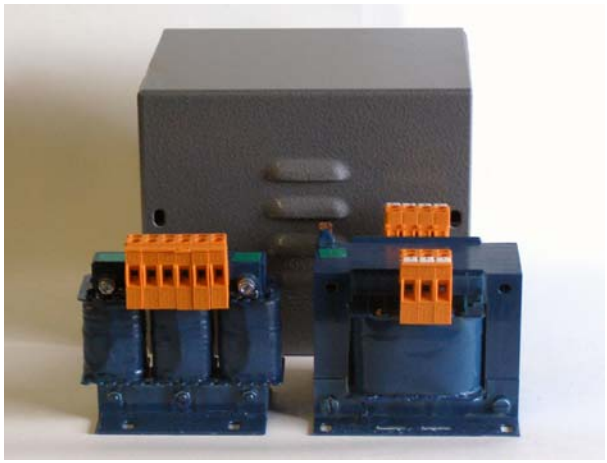
Non safety isolating

In insulation classes A, E and F
and special designs for IP65 or Ex enclosures

Ideal where output voltage (s) are similar to input voltage (s) and where safety isolation is not required

With fuse or MCB or thermal protection

With accessories including plugs and sockets, wheels, cooling fans, indicator lamps, meters and mains isolator switches.



A comprehensive range of custom built single or three phase auto transformers in either open or enclosed types.

Major reductions in both size and cost can be achieved using auto transformers. They should only be used in applications where an isolated output is not a safety consideration. Auto transformers are single winding units and offer no isolation between input and output voltages.

Standard insulation classes include A, E and F and special designs for IP65 or Ex enclosures can be produced.

They are frequently used to adjust voltages for exported or imported machines or equipment.

Our sales department will calculate the size and cost reductions if auto transformers can be utilised.

Customised units can be produced with full fuse, MCB or thermal protection and a variety of accessories can be fitted including plugs and sockets, indicator lamps, meters and mains isolator switches.

For quotes against specific requirements please contact our sales department.

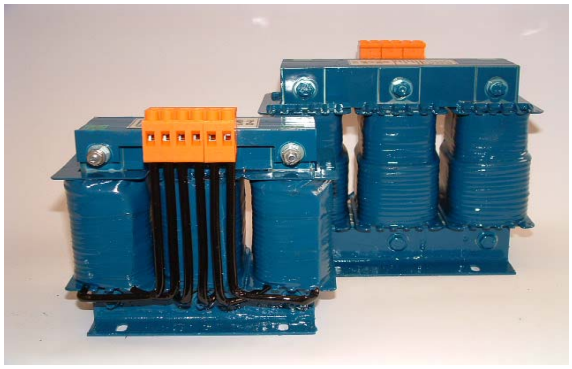
Auto transformer types available	Design and specification criteria
Single phase open type	Up to 1000V and less than 500A Naturally air cooled
Three phase open types	Up to 1000V and less than 500A per phase Naturally air cooled
Single phase enclosed In standard IP22 enclosures as shown on page 32	Up to 1000V and less than 500A per phase Naturally air cooled or fan cooled
Three phase enclosed In standard IP22 enclosures as shown on page 32	Up to 1000V and less than 500A per phase Naturally air cooled or fan cooled
Single phase enclosed In IP65 or Ex enclosures	Up to 1000V and less than 500A dependant on enclosure size Naturally air cooled utilising high grade Grain Oriented core materials
Three phase enclosed In IP65 or Ex enclosures	Up to 1000V and less than 500A per phase dependant on enclosure size Naturally air cooled utilising high grade Grain Oriented core materials

CUSTOM BUILT INDUCTIVE REACTORS FOR AC MOTOR CONTROLLERS AND CUSTOM BUILT RANGE OF DC CHOKES AND AC REACTORS

Custom built range of inductive reactors for AC motor controllers

Designed to customer specification

Using either our standard format
or to customers' own drawings or requirements



A comprehensive range of custom built inductive reactors used in conjunction with AC motor controllers.

They are connected in differential mode configuration and are used in the following three applications:
The reactor is installed between the input mains filter and the motor controller and in this application the low frequency electromagnetic interference is improved by levelling the input current drawn. This will cause a typical volt drop of between 2-4% of the nominal mains voltage.
The reactor is installed between the inverter and the motor and enables the correct de-coupling of the two devices. Where the reactor is used in a system with a single power supply for multi-axis or mandrel control devices, the reactor is installed between the mains filter and the power supply to de-couple it from the mains supply.

These reactors are custom built or can be designed to customer drawings or requirements. Where dimensions are not critical these units are designed around the SE/SF and TE/TF range of frame sizes as shown on pages 2 and 3 of this catalogue.

Information required

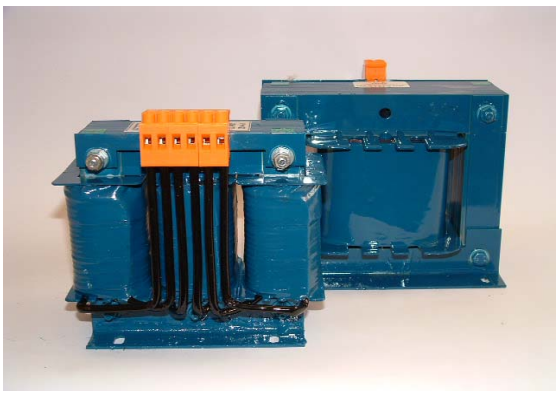
Inductance and current rating

Dimensions, if critical

Custom built range of DC chokes
and AC reactors in both single and three phase options

Designed to customer specification

Using either our standard format
or to customers' own drawings or requirements



A comprehensive range of custom built DC chokes and AC reactors in both single and three phase options.

These chokes and reactors are custom built or can be designed to customer drawings or requirements. Where dimensions are not critical these units are desined around the SE/SF and TE/TF range of frame sizes as shown on pages 2 and 3 of this catalogue.
Alternatively units can be produced to customer drawings or customer own requirements.

Information required

Inductance , current rating and frequency range

Dimensions, if critical

STANDARD SPECIFICATION
Ambient temperature range from -10 deg C to + 35 deg C
Class E or class F construction (see pages 2 and 3)
Easy access fixing centres with touch proof terminations

SINGLE OUTPUT RANGE OF AC TO DC DIN RAIL MOUNTED SWITCHED MODE POWER SUPPLIES FROM 20W TO 500W IN VARIOUS VOLTAGES WITH 20~24W AND 45W EX STOCK

Competitive prices

High quality, approved to UL,CUL and CE

From 20~24 Watt up to 500 Watt versions
Ex stock : 20~24W unit only 45mm wide, 45W unit only 49mm wide optimising the space on the DIN rail

Wide input range from less than 100V~240V AC 1 phase
Output voltages of 5V, 12V , 24V and 48V DC

EMC standards EN55022 class B,EN61000-3-2,3(All) EN55024

A high quality, highly cost effective range of DIN rail mounted switched mode power supplies from 20~24W up to 500W. The 20~24W unit is 45mm wide and the 45W unit is 49mm wide, optimises the space on the DIN rail. Both these types are ex stock. All units are available in a variety of output voltages and are approved to UL,CUL and are CE marked.They have universal inputs and all units are fully protected against overload, short circuit and over voltage and have an LED 'power on' indicator. Each unit is subjected to a 100% full load burn-in test.
EMC standards are as stated above and all units have a DC output adjuster to provide +/-10% of rated output voltage.
Safety standard are to UL 60950, CSA 60950 and CE 60950 (marking).
All units have a full 2 years warranty and are designed for an ambient temperature range from –15 to 50 deg C.

Additional Data

- Hold up time 16ms
- Short circuit protection - Auto recovery
- Over load protection - Automatic power limited
- Over voltage protection - Auto recovery
- MOSFET designed
- Operating humidity 5~95% RH, no condensing
- Storage temperature –20 to +85 deg C
- Vibration 2G 10~500Hz, 3 axes
- Convection cooled
- 350,000 Hrs MTBF per MIL-HDBK-217K

Fully detailed technical data sheets on request

STOCK RANGE OF SINGLE OUTPUT AC TO DC DIN RAIL MOUNTED SWITCHED MODE POWER SUPPLIES FROM 30W TO 960W IN VARIOUS VOLTAGES

Competitive prices and ex stock deliveries

High quality, approved to UL,CUL,TUV,CB and CE

From 30 Watt to 480 Watt with a wide input range from less than 88V up to 264V AC single phase
From 240 Watt to 960 Watt with an input range from 340~550V three phase

Output voltages of 5V, 12V, 15V, 24V and 48V DC

EMC standards EN55022 class B,EN61000-3-2,3 EN61000-4-2,3,4,5,6,8,11, ENV50204

A high quality, highly cost effective ex stock range of DIN rail mounted switched mode power supplies from 30W to 960W. These units are available in a variety of output voltages and are fully approved to UL,CUL,TUV,CB and are CE marked. They have universal inputs of 85~264V AC 1ph in 30W,45W,60W,75W,240W, the 120W range is from 88~264V AC 1ph selected by a switch and the 480W units have inputs of either 180~264V AC 1pH or 90~264V AC 1ph. Three phase units are available in 240W,480W and 960W with an input range of 340~550V AC 3ph .All units are fully protected against overload, short circuit, over voltage and over temperature and have an LED 'power on' indicator. Each unit is subjected to a 100% full load burn-in test.
EMC standards are as stated above and all units have a DC output adjuster to provide +10% of rated output voltage.
All units have a full 2 years warranty and are designed for an ambient temperature range from 0 to 45 deg C.

SINGLE AND MULTI OUTPUT SWITCHED MODE POWER SUPPLIES OPEN AND ENCLOSED TYPES IN VARIOUS VOLTAGES

Competitive prices

Comprehensive ranges from 5W to 2kW

Open type and enclosed types with DIN Rail and chassis mounted options

Single and multi output up to four DC output voltages

Power Factor Correction function available

Various approval options and EMC standards

Desktop and battery charger types

A wide variety of highly cost effective ranges of open and enclosed switched mode power supplies from 5W to 2kW.

These ranges are available in a variety of output voltages from single output to quadruple output options. The open PCB types are supplied for direct fitting into customers own equipment and the enclosed units can be supplied for chassis mounting. Most units can be adapted for DIN rail mounting.

Various additional options include PFC functions , battery charger types, enclosed desktop types and medical types.

For more information please contact our sales department.

Ranges available	Specification
Single output enclosed switched mode power supplies	From 15W to 350W and from 3V DC to 48V DC
Single output enclosed switched mode power supplies with power factor correction	From 75W to 500W and from 3.3V to 48V DC
Parallel enclosed switched mode power supplies with power factor correction	From 300W to 2kW and from 5V to 48V DC
Dual output switched mode power supplies	From 30W to 155W with duel outputs from 5V to 24V DC
Dual output switched mode power supplies with battery charging option and/or power factor correction	From 55W to 155W from 5V to 54V (and 53.5V charger options)
Triple output switched mode power supplies	From 30W to 115W with triple outputs from 5V to 24V DC
Triple output switched mode power supplies with power factor correction functions	From 75W to 150W from 5V to 24V DC
Quad output switched mode power supplies some units with power factor correction	From 60W to 375 W from in various voltage options
Open type modular switched mode power supplies Single and multi-output and with power factor correction	From 5W to 150W in a variety of voltage options
Open medical type power supplies	From 30W to 65W in various voltage options
Desktop power supplies or charges	From 108W to 216W and from 13.5V to 54V DC
Desktop power supplies with single outputs	From 12W to 80W and from 5V to 48V DC
Desktop power supplies with duel or triple outputs	From 25W to 50W in various voltage options
Plug-in power supplies	Up to 24W in various voltage options
Video game and PC power supplies	Up to 250W in various voltage options

DC TO DC CONVERTERS
PCB MOUNTING TYPES AND ENCLOSED TYPE FOR CHASSIS MOUNTING

For PCB mounting

Power ratings from 0.5W to 30W

Single and dual output options

2:1 and 4:1 wide input ranges

High reliability with 100% burn-in test

A comprehensive range of PCB mounted DC to DC converters from 0.5W to 30W ratings. Options include both single or dual output voltages and a wide input range.

They have full overload and short circuit protection and some units also have over voltage protection . All units offer high reliability and low cost and have a full 100% burn-in test.

For more detailed specifications and PCB pin configurations please contact our sales department.

Ranges available	Specification
0.5W DC-DC regulated single output	Inputs from 5V to 48V DC +/- 10% and outputs from 5V to 15V DC
1W DC-DC regulated and unregulated single output	Inputs from 5V to 48V DC +/- 10% and outputs from 5V to 15V DC
3W DC-DC regulated single and dual output	Variety of inputs and outputs from 5V to 15V and +/-5V to +/-15V DC
5W regulated & 10W single and dual output	Variety of inputs and outputs from 5V to 24V and +/-5V to +/-24V DC
15W single and dual outputs and 30W single output	Variety of inputs and outputs from 3.3V to 24V and +/-5V to +/-24V DC
10W and 15W regulated single and dual outputs	Variety of inputs and outputs from 3.3V to 15V and +/-5V to +/-15V DC

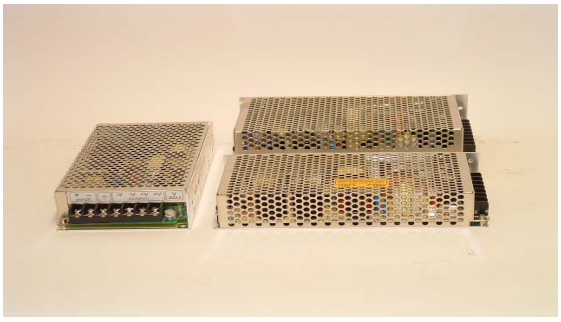
Enclosed types for chassis mounting

Power ratings from 25W to 150W

Single outputs from 5V to 24V DC

2:1 wide input ranges

Adjustable DC outputs



A comprehensive range of enclosed chassis mounting DC to DC converters from 25W to 150W ratings. Outputs range from 5V to 24V DC and have a variety of input options.

They have full overload and over voltage protection and an ambient temperature range of –10 deg C to +60 deg C.
EMC tests are to EN55022 class B and EN61000-4-2,3,4,6,8.

For more detailed specifications and sizes please contact our sales department..

Ranges available	Specification
25W DC-DC regulated single output	Variety of inputs and outputs from 5V to 24V
50W DC-DC regulated single output	Variety of inputs and outputs from 5V to 24V
100W DC-DC regulated single output	Variety of inputs and outputs from 5V to 24V
150W DC-DC regulated single output	Variety of inputs and outputs from 5V to 24V

STOCK RANGE OF UNREGULATED 24V DC POWER SUPPLIES WITH BOTH SINGLE AND THREE PHASE INPUTS

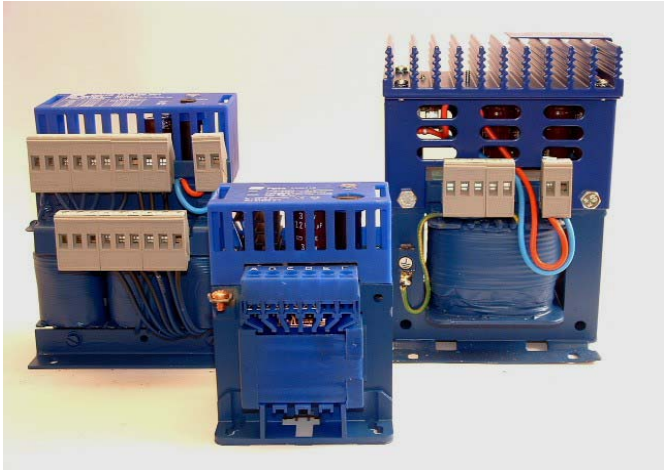
Unregulated and smoothed DC outputs

Single and three phase inputs with 24V DC output

Single phase input with from 1A to 16A DC output with a ripple of less than 5%
Three phase input with from 6A to 40A DC output with ripples of less than 6% and less than 3%

Off load voltage <30.2V with 6% line over voltage
Full load voltage >20.4V with 10% line under voltage

DIN rail mounting option from 1A-2.5A DC.



Three ranges of unregulated 24V DC conventional power supplies.

A single phase range with either 230V +/- 5% or 400V +/- 5% inputs and a 24V DC output from 1A to 6A with 5% ripple.
A single phase range with dual inputs of 230/400V +/- 5% and a 24V DC output from 10A to 16A with 5% ripple.
A three phase range with 400V +/- 5% inputs and a 24V DC output from 6A to 40A with either 6% or 3% ripple.

The transformers are to VDE 0551 class 1 construction and are suitable for ambient temperatures of up to 60 deg C. The connections are touch protected screw terminals and all units are designed for chassis mounting. Also single phase units up to 2.5A DC are suitable for DIN rail mounting with the use of an easy fit adaptor.

STOCK RANGE OF SINGLE OUTPUT 24V DC SWITCHED MODE POWER SUPPLIES WITH BOTH SINGLE OR THREE PHASE INPUTS

Competent COSMO slim line series
Slim construction to maximise space on the DIN rail
Covered input connections and range of 5A -20A at 24V DC
Power factor correction to EN 61000-3-2
Extended output voltage range
Balanced load sharing when wired in parallel
Low ripple < 50mV
Overload indicator
Approvals include UL and CUL
Special optional functions

The Competent COSMO slim line series offers the design engineer the optimum in design excellence for a comprehensive range of 24V DC applications.
The slim construction maximises the space on the DIN rail and units from 24V DC 5A to 20A have a unique termination cover to protect the connections and the wiring. The terminations are a cage clamp type for ease of wiring and consistent reliability. All units comply with EN 61000-3-2 for the latest power factor correction requirements. The DC output voltage is adjustable as shown in the table below and when they are wired in parallel the load is balanced automatically between the units. The output ripple is below 50mV and in the event of an overload a red LED indicator is activated. Special optional functions include remote ON/OFF control, overload signalling, power failure signalling and has the option of either hicc-up mode or turn-off mode for the output overload protection.
The units are fully approved to the highest standards including UL,CUL and LGA.

Reference	Input range 47-63Hz	Output	W (mm)	D from rail	H	Weight (kg)	Typical efficiency	Output adjustment range

Competent COSMO conventional series
High quality and reliability with proven track record

From 2.5A to 40A at 24V DC
In both single and 3 phase inputs
Overload indicator
Safety standard to IEC 950, EN 60950 and VDE 0805
RFI suppression to EN 55011/ EN 55022 class B
Noise immunity to EN 50082-1/-2

The Competent Cosmo conventional series of 24V DC range offer high specification and proven reliability.
The range has been extensively used throughout the world and has a proven track record for long term reliability and high quality. Units are available from 24V DC 2.5A to 40A and are available in both 1 ph and 3 ph inputs. RFI suppression is to EN 55011/ EN 55022 class B and noise immunity is to EN 50082-1/-2. They are fully protected against overload and short circuit and are in accordance to IEC 950, EN 60950 and VDE 0805 safety requirements . All units have an inbuilt 'on' indicator.

DC UPS SYSTEMS FOR BATTERY BACK-UP OF 12V AND 24V DC

DC-UPS systems and components

For both 12V and 24V DC applications to support equipment from a few seconds up to many hours

Switch automatically to battery supply in case of mains failure

DC output currents from 5A DC to 75A DC

Can be supplied as UPS, UPS plus battery pack or UPS plus battery pack and power supply or charger

A comprehensive range of uninterruptible power supply modules for 12V DC and 24V DC systems.

Used to support DC systems in the event of a mains failure or to bridge momentary voltage breaks. A variety of system options are available from UPS, UPS with battery pack, to UPS with battery pack and power supply or charger. Systems can switch automatically to the battery supply in the event of a mains failure and output currents from 5A to 75A DC can be supported.

Associated equipment can also be supplied to complement these ranges including diode de-coupling modules, contact accessory modules and complete sealed lead battery modules.

To discuss specific applications and system requirements please contact our sales department.

System description	Ratings available
Regulated battery charger for 24V DC systems	From 1ph input,0.2A DC output to 3ph input, 40A DC output
Regulated battery charger for 12V DC systems	From 1ph input,1.25A DC output to 3ph input, 20A DC output
DC-UPS mains failure modules	From 24V DC 5A to 20A, from a few seconds up to many hours Powered by the Competent Cosmo series of power supplies (Page 15)
DC-UPS mains failure and voltage break modules	From 24V DC 20A to 40A, from a few seconds up to many hours Powered by the Competent Cosmo series of power supplies (Page 15)
DC-UPS mains failure and voltage break modules	From 24V DC 20A to 75A, from a few seconds up to many hours Powered by the Competent Cosmo series of power supplies (Page 15)
DC-UPS mains failure and voltage break modules	From 12V DC 10A to 40A, from two minutes up to many hours Powered by 12V DC regulated battery charger
DC-UPS mains failure and voltage break module	From 24V DC 30A, from 3 to 230 minutes Powered by the unregulated range of 24V DC power supplies (page 14)
Complete DC-UPS module	19.5V-26.5V 4.5A DC with battery power Complete system with power supply, charger, DC-UPS and battery for 15 minutes bridging time
Maintenance-free lead acid sealed battery modules	From 12V DC 5Ah to 65Ah, for 24V DC 2 x 12V batteries Can be supplied loose or fitted to a mounting plate for easy installation

For more information or detailed specifications please contact our sales department

CUSTOM BUILT POWER SUPPLIES WITH EITHER 1PH OR 3PH INPUTS

Custom built power supplies with single phase inputs
Custom built power supplies with 3 phase inputs

DC outputs from below 1A up to 500A

Open type or enclosed, portable or fixed
Naturally air cooled or forced air cooled

With accessories such as metering, indicators, mains isolators, with input fuse or MCB or output semi conductor fuse protection

Output smoothing available on some types

A comprehensive range of custom built power supply units with either single or three phase inputs.

Single phase units have a high output ripple of 48% with conventional full wave bridge rectifiers. Three phase units have a much lower output ripple of 6% with conventional full wave bridge rectifiers. These values of ripple can be reduced to lower levels with output smoothing, where practical.

Units can be open or enclosed and can be supplied with separate transformers and bridge rectifiers with suitable heat sinks. Cooling can be either naturally air cooled or forced air cooled with the use of AC or DC fans.

Fully customised units can be produced with accessories such as AC and DC metering, status indicators, mains isolators switches and input and output protection.

To discuss specific applications and system requirements please contact our sales department.

PSU type	Description
Open type single phase input with DC output	Single phase transformer and bridge rectifier with no output smoothing From below 1A up to 500A – ripple 48%
Open type three phase input with DC output	Three phase transformer and 3ph bridge rectifier with no output smoothing From 5A up to 500A – ripple 6%
Open type single phase input with smoothed DC output	Single phase transformer and bridge rectifier with output smoothing From below 1A up to 500A – ripple 5% to 48% as required
Open type three phase input with smoothed DC output	Three phase transformer and 3ph bridge rectifier with output smoothing From 5A up to 500A – ripple 3% to 6%
Enclosed type single phase input with DC output	Single phase transformer and bridge rectifier with no output smoothing From below 1A up to 500A – ripple 48%
Enclosed type three phase input with DC output	Three phase transformer and 3ph bridge rectifier with no output smoothing From 5A up to 500A – ripple 6%
Enclosed type single phase input with smoothed DC output	Single phase transformer and bridge rectifier with output smoothing From below 1A up to 500A – ripple 5% to 48% as required
Enclosed type three phase input with smoothed DC output	Three phase transformer and 3ph bridge rectifier with output smoothing From 5A up to 500A – ripple 3% to 6%

CONSTANT VOLTAGE TRANSFORMERS,ULTRA-ISOLATION TRANSFORMERS MEDICAL ISOLATION TRANSFORMERS & TRANSIENT VOLTAGE SUPPRESSORS

Constant voltage transformers from 100VA to 45kVA at unity power factor (1.0pf)

Ultra-isolation transformers from 250VA to 10kVA
Larger units available on request

Medical isolation transformers from 250VA to 1.0kVA
Larger units available on request

Transient voltage suppressors
For zone C-Factory floor/industrial
For zone B-Engineering and communications

A comprehensive range of mains conditioning and load protection units.

Constant voltage transformers are ideal maintenance free solutions for loads that can suffer erratic operation or be damaged by electrical noise, local transients, mains power sags, surges or brownouts.

Ultra isolation transformers provide a clean electrical supply that is noise and spike free. They help prevent data processing errors and the type of damage caused by lightening strikes.

Medical isolation transformers are for loads that require complete isolation due to high leakage or transient generation in medical applications. They offer protection to loads that can be damaged or suffer erratic operation by electrical noise and local transients.

Transient voltage suppressors offer protection from mains borne transients or the effects of local lightening strikes. They are designed to satisfy the requirements for zone protection defined in BS EN6651 and UL 1449.

For full technical data on any of the above products please contact our sales department.

Products	Description and application
Constant voltage transformers	From 100VA to 45kVA For medical equipment, industrial PLCs, process control, weighbridges, grid link applications Rail signalling and critical systems, sensitive electronic test systems.
Ultra-isolation transformers	From 250VA to 10kVA with larger units available on request For telecoms switches, modems, hubs and routers, retail EPoS terminals and work stations Sensitive laboratory test gear
Medical isolation transformers	From 250VA to 1kVA with larger units available on request For medical equipment requiring separation from the mains supply (BS EN 60601) For medical computer terminals and workstations
Transient voltage suppressors	Zone C-office applications for protection of mains incomer, mains distribution points, 3ph sub distribution points and high current distribution Zone B-engineering and communications applications for protection of sub distribution and sensitive single and three phase loads Zone A-Factory floor applications for transient protection of consumer units, OEM design and protection and sensitive single and three phase loads

BATTERY CHARGERS FOR ELECTRIC VEHICLES AND DC POWERED MOBILE AND FIXED EQUIPMENT

Comprehensive ranges of battery chargers

Some units in stock for immediate despatch

For the charging of lead acid, gel and inner recombination batteries in 12V, 24V, 36V, 48v, 72V, 80V, 96V and 120V

Charging currents from 5 Amps through to 320 Amps

With either single phase or three phase inputs

Using the latest charging technology including high frequency switched mode designs

A comprehensive range of high technology battery charging units for charging electric vehicles and mobile or fixed DC equipment.
All common battery types can be accommodated including lead acid, gel and inner recombination types. These are available from battery voltage combinations from 12V , 24V, 36V, 48V, 72V, 80V, 96V to 120V with charging currents from 5 Amps through to 320 Amps dependant on the vehicle, machine or equipment.
Both single and three phase input units are available. All types utilise the latest in battery charging technology including the latest innovations in low weight and compact high frequency switched mode technology.
Due to the importance in matching the equipment with the correct charger, technical assistance must be obtained from our sales department.

Charger range Reference	Description
Micro - Logic A	Automatic single phase inputs for small lead acid batteries Input from 100V to 240V AC Outputs 12V,24V,36V in 10A,15A,20A,30A & 40A
Micro - Tech A	Automatic single phase and 3ph inputs for lead acid batteries Inputs 230~240V 1ph or 400~415V 3ph AC Outputs 24V,36V, 48V, 72V & 80V in 30A ,40A ,50A, 60A, 80A, 100A, 120A & 140A
Micro - Digital A	Automatic single phase and 3ph inputs for lead acid batteries Inputs 230~240V 1ph or 400~415V 3ph AC Outputs 12V,24V,36V,48V,60V,72V,80V,96V & 120V in 15A,20A,30A ,40A ,50A, 60A, 80A, 100A, 120A ,140A,160A,180Z,200A,200A,240A280A & 320A
Micro Golf A	Automatic single phase inputs for small capacity sealed batteries Input from 115V to 230V AC +/-15% Outputs 12V,24V,36V & 48V in 5A,7.5A,10A,15A,20A & 25A
Power Switch	High frequency battery charger with universal input from 185V to 265V AC 50/60Hz Outputs 24V,36V & 48V with rechargeable capacity from 60Ah/C5 to 720Ah/C5
Power Switch single phase with P.F.C	High frequency battery charger with universal input from 185V to 265V AC 50/60Hz and with PFC Outputs 24V,36V,48V,72V & 80V 3000W with rechargeable capacity from 180Ah/C5 to 960Ah/C5
Power Switch 3 phase	High frequency battery charger with universal 3ph input from 340V to 460V AC 50/60Hz Outputs 24V,36V,48V,72V & 80V with rechargeable capacity from 240Ah/C5 to 840Ah/C5
Extreme	Automatic single phase inputs for extreme applications to IP 65 Input from 180v to 265V AC Outputs 24V,36V & 48V in 25/30A from 90Ah/C5 to 360Ah/C5
Easy - Golf	Automatic single phase chargers for small sealed (gel or inner recombination) batteries Input from 115V to 230V AC +/-15% AC Outputs 24V in 4A,6A,8A & 10A
Easy - Log	Automatic single phase chargers 12V 10A for small lead acid batteries Input 230V AC 50/60Hz Outputs 12V 10A
MGX m	Automatic single phase chargers with data memory for both lead acid and gel batteries Input 185V~265V AC 50/60Hz Outputs 12V,24V,36V & 48V 30Ah/C5 to 480Ah/C5
Custom built designs	Bespoke designs to customer own specification on request

 The above information is listed to show the wide range of standard battery charging units available

For more information and recommendations regarding the choice of charger please contact our sales department

SINGLE AND THREE PHASE EMC FILTERS
STANDARD RANGES AND CUSTOM BUILT UNITS

Single phase filters from 5 Amps to 100 Amps

Three phase filters from 4 Amps to 2500 Amps
VPE 'compact' series from 180 Amps to 2500Amps

Three phase and neutral range with UL approval

Full compliance testing to IEC and EN standards with on site testing for large machines or installations

Full range of compatible components including output chokes, common mode chokes and surge arresters.

Comprehensive ranges of both single and three phase RFI filters are available to assist design engineers to meet the various requirements of the relevant EMC legislation. These can be standard ranges or custom built.

Single phase units are from 5 Amps to 100 Amps and are available in a variety of case and termination options. Three phase units are from 4 Amps up to 2500 Amps in 'bookend', 'shoebox' and 'footprint' styles'. Termination options include terminal blocks, terminal blocks and flying leads, and high current copper bus bar connections . Standard voltage options are up to 760V AC . Footprint filters are designed around the specific requirements of the inverter, servo motor or motor control system. The VPE range (*), from 180A-2500A , is one of the most compact ranges of high current filters in the whole EMC market.
A full range of PCB mounted and IEC inlet filters is also available.

Full compliance testing to IEC and EN standards can be performed by our accredited EMC test facility either in-house or on site.

To compliment the extensive range of filter options there are full ranges of compatible components which include output chokes, common mode chokes and surge arresters. For more information please contact our sales department.

Range	Current rating	Voltage & ph	Terminations	Description	Style
EMK 1	10A to 65A	250V AC 1ph	Terminal blocks	High attenuation and low leakage current	Shoebox
EMK 3	6A to 180A	480V AC 3ph	Terminal blocks	High attenuation and low leakage current	Shoebox
EMK 3	220A to 1000A	480V AC 3ph	Screw terminals	High attenuation and low leakage current	Shoebox
EMK 4	6A to 170A	480V AC 3ph & N	Terminal blocks	High attenuation and low leakage current	Shoebox
EMK 251	4A to 24A	480V AC 3ph	Input terminal blocks & output flying leads	High attenuation and low leakage current	Shoebox
*VPE 3/A or /B	180A to 2500A	DC to 760V AC	Bus bars	High attenuation and low leakage current	Shoebox
EMS 1	20A to 100A	250V AC 1ph	Terminal blocks or flying leads (C)	High attenuation and low leakage current	Shoebox
EMS 3	20A to 210A	480V AC 3ph	Terminal blocks or flying leads (C)	High attenuation and low leakage current	Shoebox
EMS 4	20A to 100A	480V AC 3ph & N	Terminal blocks or flying leads (C)	High attenuation and low leakage current	Shoebox
DLC 1	10 to 35A	250V AC 1ph	Terminal blocks or flying leads	High attenuation and low leakage current	Bookend
DLC 3	7A to 210A	480V AC 3ph	Terminal blocks or flying leads	High attenuation and low leakage current	Bookend
SLC 1	10 to 35A	250V AC 1ph	Terminal blocks or flying leads	High attenuation and low leakage current	Bookend
SLC 3	7A to 210A	480V AC 3ph	Terminal blocks or flying leads	High attenuation and low leakage current	Bookend
VEB 3	12A to 130A	480V AC 3ph	Terminal blocks or flying leads	High attenuation and low leakage current	Bookend
MLC 3	7A to 180A	480V AC 3ph	Terminal blocks or flying leads	High attenuation and low leakage current	Bookend
Footprint 1	5A to 35A	250V AC 1ph	To requirements	Designed to requirements	Footprint
Footprint 3	3A to 180A	220V-480V 3ph	To requirements	Designed to requirements	Footprint
SF /2	4A to 9A	230V-260V 3ph	Terminal blocks	Sine wave filter	Shoebox
SF /4	4A to 24A	400V-510V 3ph	Terminal blocks	Sine wave filter	Shoebox
FIN 1700	7A to 25A	440V AC 3ph	Terminal blocks	High attenuation with UL approval	Bookend

Our ranges of RFI filters and EMC components are extensive

Page 25 For more detailed information or for a fully comprehensive catalogue please contact our sales department

To cross reference existing suppliers' filters or for advice on suitable equivalent units please contact our sales department

STOCK RANGES OF
SINGLE AND THREE PHASE EMC FILTERS

Ranges of single and three phase EMC filters for immediate despatch on a next day delivery

Single phase filters from 6A to 65A, in both single and two stage configurations

Three phase filters from 6A to 180A 520V AC50/60Hz Bookend style with terminal block connections

DIN rail mounted 3ph filters from 5A to 25A 500V AC 50/60Hz

Comprehensive ranges of both single and three phase EMC filters that are held in stock for immediate despatch on a next day delivery service.

Single phase units are from 6A to 65A with push on amp tag or terminal block connections. Medium and high performance single phase filters are available in both single and two stage configurations.

There are two options for 3 phase filters:

A conventional bookend range of filters from 6A to 180A with a small footprint and high performance. These are designed to meet UL standard 1283 and EN 133200 and have terminal block connections.

A DIN rail mounted range of filters from 5A to 25A with terminal block connections.

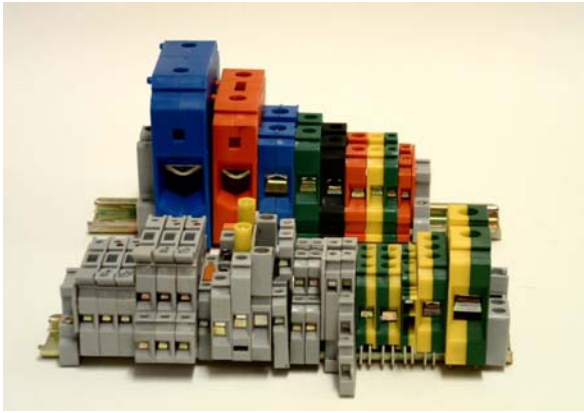
Standard , special or custom built filters can be held in stock for immediate despatch against specific call off orders.

To discuss your specific delivery requirements please contact our sales department.

Reference	Current rating	Voltage & ph	Terminations	Description	Leakage current
FIN 33.006F	6A	250V AC 1ph	Amp tags	Single stage general purpose filter	<1.5mA
FIN 35 F/M range	From 5A to 24A	250V AC 1ph	Up to 16A amp tags 24A terminal blocks	Two stage general purpose filter	<1.5mA
FIN 40 F/M range	From 5A to 24A	250V AC 1ph	Up to 16A amp tags 24A terminal blocks	Two stage general purpose filter	<1.5mA
FIN 50 F/M range	From 6A to 24A	250V AC 1ph	Up to 16A amp tags 24A terminal blocks	High attenuation two stage filter	<2.2mA
EMK 1 range	From 10A to 30A	250V AC 1ph	Terminal blocks	High attenuation filter	<3.2mA
6-3000 range	From 6A to 180A	520V AC 3ph	Terminal blocks	High performance With small footprint	< 4mA nominal
FIN 538 range	From 5A to 25A	440V AC 3ph	Terminal blocks	DIN rail mounted in polyester enclosure	<35mA

DIN RAIL MOUNTED TERMINALS AND ACCESSORIES

Feed through range of DIN rail mounted terminals
Multi-level terminals (double deck and triple deck)
Disconnecting terminals: fused and non fused
Fused feed through terminals
Distribution blocks
Earth terminals
Bus bar power terminals
Micro terminals
“U” series terminals
Spring clamp terminals
PCB connectors
DIN rail mounted melamine terminals



A comprehensive range of DIN rail mounted terminal blocks and associated accessories.
Feed through terminals from KUT 2.5 (2.5mm sq mm) to KUT 95 (95mm sq mm) and accessories are standard .
Where wiring space is at a premium multi-level terminals in both double deck and triple deck are available in 2.5 sq mm.
A range of disconnect terminals are available where fault finding without removing the cables is necessary. These are from 2.5 sq mm to 6 sq mm and also come with a fused terminal option.
Fused feed through terminals with built in safety fuse levers that take 5mm x 20mm or 5mm x 25mm fuses are available and these can be fitted with LED ‘fuse blown’ indication.
Distribution blocks can be used where a single wire connection is split to give multiple output connections.
A full range of rail mounted earth terminals from 6 sq mm to 35 sq mm is available.
Bus bar power terminals from 70 sq mm to 120 sq mm can be used for high power applications.
A wide range of compact micro terminals from 1.5 sq mm to 4 sq mm can be used where space is extremely limited.
A “U” range of terminals is available where a high reliability contact is required and can be used to connect cables from 0.2 sq mm to 10 sq mm. These terminals also come with fused, twin and double deck options as well as an earthed range from 2.5 sq mm to 10 sq mm.
Where ease of wiring is necessary the spring clamp terminals can be used from 2.5 sq mm to 6 sq mm. These terminals provide a reliable, fast and maintenance free connection without the use of tools.
A comprehensive range of PCB connectors is available in a wide variety of mounting options, these include 1,2 and 3 way connectors, single and double deck connectors, fuse connectors and disconnecting types.
To complement the above types a comprehensive range of accessories is available. This includes end and barrier plates, marking accessories, inter-connecting accessories, end clamps and DIN mounting rails.
For comprehensive information please contact our sales department.

Series	Description	Rating(IEC)/ size
KUT	Feed through terminals	From 25A to 232A
KUDD,KU2D,DU3D & DUSD	Multi-level double and triple deck	500V 24A 4 sq mm
KUDT,KUTSD & KSTD	Disconnecting terminals	From 10A to 41A 4mm sq to 10 sq mm
KUTD & KUDF,	Disconnecting fuse terminals	From 6.3A to 61A 4mm sq to 16mm sq
KUDF & KUDDF	Fuse feed through terminals	6.3A 4mm sq
DBK & FDBK	Distribution blocks	1x 2 to 1 x 8 way 32A to 114A
ET	Earth terminals	From 6 sq mm to 35 sq mm
DPBB & DPBC	Power (bus bar) terminals	From 192A to 269A 70 sq mm to 120 sq mm
SUT, CET, NET, MBT MBET & PET	Micro terminals	From 18A to 32A 1.5 sq mm to 4 sq mm
UBT , UBDD & UBDF EBT	U series terminals & U series earth terminals	From 24A to 57A 2.5 sq mm to 10 sq mm
DCC	Spring clamp terminals	From 24A to 41A 2.5 sq mm to 6 sq mm
PUT,ECM,ECD,ECDD,ECDS,ECDF ECDT & ECC	PCB connectors	From 6.3A to 15A 0.5 sq mm to 2.5 sq mm
ACCESSORIES	End/barrier plates,markers, Interconnecting,end clamps & DIN rail	Also melamine terminals Available on request

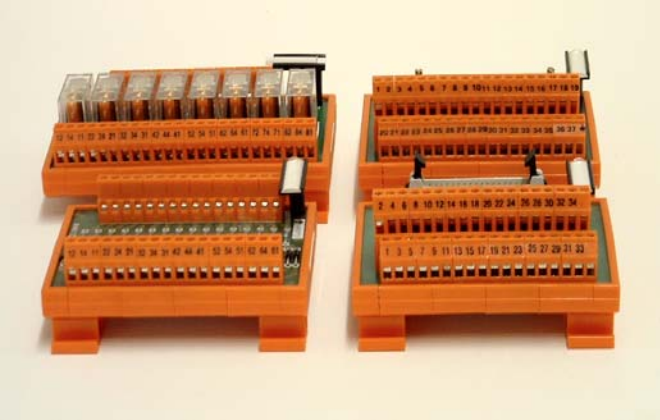
DIN RAIL MOUNTED
INTERFACE MODULES

Passive interface modules
Relay interface modules
Relay modules with fuse at poles
Relay modules with IDC/D-Sub connectors
Diode modules
Signal distribution modules
Resistor modules
LED-Resistor modules
Solid state relay modules
DIN rail mounted switched mode power supplies



A comprehensive range of DIN rail mounted interface modules for the automation, controls and machine tool markets.
Passive interface modules can be supplied having sub miniature D(Sub-D) male and female connectors from 9 pin to 50 pin. Also a range with IDC or FRC (Header) connectors from 10 pin to 64 pin is available.
Relay interface modules are in both 1 pole and 2 pole double throw with both AC and DC coils. They are available in 1 to 16 channel and have LED indication and a freewheeling diode is provided for relay coil protection. Four pole double throw units can be supplied in 1 to 8 channel.
Fused relay modules with 5 x 20mm fuse holders in 1 pole and 2 pole versions are available. These have fuses at the poles to protect from overloads and short circuits and can be supplied with or without fuse blown indication.
Relay modules with IDC/D-Sub connectors on the contact side provide an input or output interface to PLC/DSC/CNC or any other dedicated computer system in the control, automation, machine tool and process industries. They are available in 1N/O, 1 C/O and 2 C/O configurations.
Diode modules are available in series, O ring and other configurations. They are used for reverse DC polarity protection, freewheeling and DC inductive kick suppression from 4 to 16 diode.
Signal distribution modules are for the distribution of both AC and DC signals. Special configurations are available on request.
Resistor modules are available in series and parallel configurations with from 4 to 16 resistors. Resistors are 4700 Ohms/0.25 Watt and resistor current is 5mA at 24V DC.
LED resistor modules are available in series, common cathode and common anode types. These modules are used to monitor control functions and sequences to detect problems quickly and efficiently.
Solid state relay modules are widely used in automation for potential separation between control and field signals. They range fro, 1 to 16 channels .
DIN rail mounted switched mode power supplies are available in DC power ratings from 5V 1A to 5V 10A, 12V 1A to 12V 10A and 24V 1A to 24V 10A.
For a detailed short form brochure please contact our sales department.

RESISTORS FOR POWER APPLICATIONS
FROM 2 WATTS TO 6000 WATTS

Ceramic cased wire wound resistors from 2-20 Watts
Aluminium housed, chassis mounted, wire wound resistors from 5-300 Watts
Aluminium housed, chassis mounted, wire wound resistors with a large creepage distance in 25 Watt and 50 Watt
Thick film power resistors from 100 Watts to 250 Watts
Silicone & vitreous coated wire wound resistors in both fixed and adjustable types from 25-1500 Watts
Fibre glass resistor assemblies from 500-3000 Watts in free air to 850-6000 Watts with fan cooling.

A comprehensive range of power resistors from 2 Watts to over 6000 Watts.

Ceramic cased wire wound resistors are from 2-20 Watts with Ohmic values from 0.01E-50K.
Aluminium housed, wire wound resistors for chassis mounted range from 5 Watts to 300 Watts. An alternative range with of units with a large creepage from 25-50 Watts is also available. Both types offer a light weight, compact size and low cost with non-inductive models available as well as custom built types.
Thick film power resistors are from 100 Watts to 250 Watts and have the advantage of a good power to volume ratio.
Silicone and vitreous coated wire wound resistors are available from 25-1500 Watts in both fixed and adjustable types. The fixed types are from 0.1 ohms to 1000K ohms and the adjustable types are from 0.10 ohms to 130K ohms.
For high power applications a range of fibre glass resistor assemblies is available with ratings of 500-3000 Watts in free air to 850-6000 Watts with fan cooling. These units offer low cost , low weight, low operating temperature and extremely high efficiency when fan cooled.

For detailed technical advise and a comprehensive brochure please contact our sales department.

Type	Power ratings	Description	Applications
CER	2W, 3W, 5W, 7W, 10W, 15W, 20W	Ceramic encased wire wound resistors Fire proof ceramic case Tolerances +/-5% , +/-10% Non inductive types available	General power applications
TFR	100W to 250W	Thick film power resistors Good power/volume ratio Suited to UL94-VO applications Non inductive performance for high frequency applications	General power applications
AHCR	25W & 50W	Fixed power wire wound resistors Aluminium housed With large creepage distance Chassis mounted	General power applications
AHR	5W, 10W, 25W, 50, 100W 150/200W & 250/300W	Fixed power wire wound resistors Aluminium housed Chassis mounted Screw or solder tag connections	General power applications Induction furnaces Medical equipment Humidity chambers
SVR	25W, 30W,40W,50W,75W, 100W,150W,200W,250W, 300W,400W,500W,600W, 75OW,1000W,125OW,1500W	Fixed type silicone & vitreous coated wire wound resistors Adjustable type silicone & vitreous coated wire wound resistors Non inductive types available Various mounting options	Educational modelling Load testing Machinery and power distribution Instruments and automation control
VHWR	1000W, 1500W, 2000W, 2500W, 3000W	High wattage wire wound resistors Current ratings from 4A to 27A Variable resistors available Can be supplied enclosed	Load banks Capacitor discharge Neutral grounding
GR & GRA	In free air 500W,600W,2000W,3000W Fan cooled 850W,1000W,4000W,6000W	Wound on fibre glass cord Can be assembled to form high wattages Can be supplied enclosed	Load banks Inverters General power applications

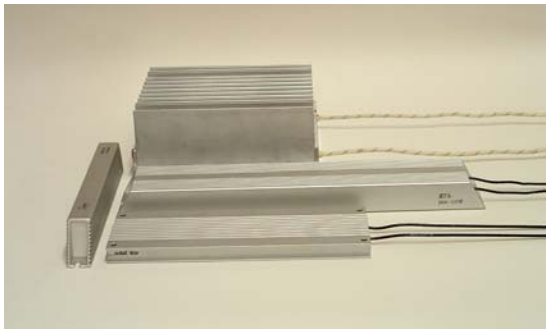
BRAKING RESISTORS
FROM 60 WATTS TO 3000 WATTS

Aluminium housed metal clad braking resistors
Bookend and low profile options from 60W to 1000W

Stackable slim type aluminium housed braking resistors
From 100W to 500W

Edge wound resistors in 800W, 1000W and 1200W

High wattage wire wound resistor from 1000W to 3000W



The EMCV and EMCH ranges of aluminium housed metal clad braking resistors in both upright 'bookend' style and 'flat 'low profile' styles. The full range is from 60 Watts to 1000 Watts in 11 standard ratings. These units offer low price with a small overall size , they are high power with excellent load life stability. They are moulded within a self extinguishing , solvent and moisture resistant material. Non inductive types are available and custom built units can be produced for special requirements.

The SLR range of high power, slim-type aluminium housed resistors from 100 Watts to 500 Watts in 7 standard ratings offer an excellent space factor to power ratio. They are low cost and light weight with good heat conduction. Non inductive types, modules with thermal switches and high or low resistance values are available. Multiple resistors can be assembled together for higher power ratings.

The OER range of edge wound resistors, in 800 Watts, 1000 Watts and 1200 Watts, are constructed by coiling the resistor around ceramic insulators on a steel strip. The resistor element is made of stainless steel, fecral or nickel chromium. The ceramic core is resistant against shock or vibration and the edge wise helical design offers efficient cooling with an extended life. These units are industry standards for easy replacements for other major brands. They can be easily assembled in multiple banks and can be supplied fully enclosed. Custom built units are available on request.

The VHWR range of wire wound resistors are high wattage from 1000 Watts to 3000 Watts in 5 standard sizes. They are available in current ratings from 4 amps to 27 Amps. They are constructed from continuously wound resistance wire on a high strength and high temperature ceramic core over a steel frame. Non inductive and custom built resistors are available on request. They can be supplied as variable types, assembled in multiple banks and can be fully enclosed.

For detailed technical advise and a comprehensive brochure please contact our sales department.

Type	Power ratings	Description	Applications
EMCV & EMCH	60W, 80W,100W,120W, 150W,200W,300W,400W, 500W,750W and 100W	Aluminium housed, metal clad Filled with self extinguishing material Amp tag terminations or flying leads Operating temperature from –55 deg c to +275 deg C	Braking resistors
SLR	100W, 150W, 200W 250W ,300W,400W and 500W	Aluminium housed, metal clad Filled with self extinguishing material Flying lead connections Temperature from –55 deg c to +275 deg C @ 40 deg C ambient Temperature from –55 deg c to +250 deg C @ 20 deg C ambient	Charging resistors, dynamic braking resistors, cranes, snubber resistors, hoists, CNC machines, electric cars, power sources for industrial instruments
OER	800W, 1000W and 1200W	Edge wound on ceramic insulators over a steel strip Strong end terminations in stainless steel Low temperature coefficient elements Can be assembled as a bank of resistors Enclosed units available	To accelerate, dynamic braking of motors, neutral grounding resistors, AC and DC dynamic load banks, current limiting, blast for mercury vapour lamps
VHWR	1000W, 1500W, 2000W 2500W and 3000W	Wire wound on strong ceramic insulators over a steel frame Turns separated by a groove on the ceramic core Variable resistors available Can be assembled as a bank of resistors Enclosed units available	Load banks, dynamic braking, capacitor discharge, neutral grounding

AC & DC COOLING FANS, CROSS FLOW FANS AND FAN ACCESSORIES

AC cooling fans from 80mm to 250mm
In 120V & 230V 50/60Hz with sleeve and ball bearing

DC cooling fans from 25mm to 170mm
In 5V, 12V, 24V and 48V with sleeve and ball bearing

AC and DC cross flow fans from 25mm to 110mm diameter
In 120V & 230V 50/60Hz with sleeve and ball bearing
In 12V, 24V and 48V DC with sleeve and ball bearing

All in various air flows

Offering low noise, low power consumption,
low temperature rise and greater air flow

A comprehensive range of AC and DC cooling fans, cross flow fans and accessories.

The ranges of AC fans are from 80mm to 250mm and are available in both 115V and 230V options. They have either sleeve or ball bearings, flying leads or terminal connections and come in a variety of air flow speeds. Both AC axial and AC blower types are offered.

The DC ranges of cooling fans are from 25mm to 170mm and are available in 5V, 12V, 24V and 48V version. They have either sleeve or ball bearings, flying leads or terminal connections and come in a variety of air flow speeds. Both DC cooling and DC blower types are offered.

A variety of construction materials are used for all the housings with thermoplastic and metal impeller options.

AC and DC cross flow fans are from 25mm to 110mm impeller diameter and are available in 115V and 230V AC and 12V, 24V and 48V DC options. Impeller lengths are from 98mm to 300mm and the motor can be positioned at either end of the fan. Air flow can be forwards or upwards and air flow speeds are from extra low to super speed with a duel speed option also available.

Fan accessories include thermo plastic fan guards, filter media and media retainers as well as circular metal wire formed guards and various plug and connection cords.

SHEET STEEL VENTILATED ENCLOSURES TO IP22 FOR TRANSFORMERS AND POWER SUPPLIES

Sheet steel ventilated enclosures to IP22 for stock transformers, custom built transformers and power supply units

SP1-SP4 enclosures with base mounting fixings and 20mm cable entries

SP5-SP7 wall and floor mounted enclosures with 20mm cable entries

SP8-SP9 and T2-T5 floor mounted enclosures with cable gland plates

Sheet steel construction with epoxy powder finish

A comprehensive range of standard ventilated enclosures to IP22 for stock transformers, custom built transformers and power supply units.

The smaller units from SP1-SP4 are designed with base mounting fixings and have 20mm cable entries for ease of wiring. Units from SP5-SP7 are designed for either floor or wall mounting and have 20mm cable entries on either side of the enclosure for ease of wiring. The larger units SP8-SP9 and T2-T5 are designed for floor mounting and are fitted with removable gland plates.

The construction is sheet steel with a durable epoxy powder paint finish in hammer grey.
Special enclosures can be made to order, please contact our sales department for details.

Reference	L	W	H	Fixing	Wiring
SP1	120	95	90	Base mounting	20 mm cable entries

TP4	625	500	600	Floor mounting	Via gland plate
TP5	850	600	800	Floor mounting	Via gland plate

Special enclosures can be produced to order
This includes designs to IP23, IP44 , IP54 and IP65
Special paint colours and finishes are also available
SP8-SP9 and TP2-TP5 enclosures can be fitted with wheels for mobility
For more information please contact our sales department

GENERAL

Ambient temperature range
The specified temperature range within which the device is designed to operate
Efficiency
The ratio of output power to input power expressed as a percentage
Power de-rating
The required reduction in output power of a device where the specified ambient temperature range is exceeded
Power factor: cos-phi
The ratio of real power to apparent power due to the non sinusoidal shape of the input current

TRANFORMERS

VA rating
The combination of output voltage and output current. Where multiple outputs occur the overall VA rating is the total VA of all the output windings, kVA is kilovolt amperes
Double wound transformer or isolation transformer
A transformer with at least two windings providing isolation between the input and output circuits
Auto transformer
A single winding transformer with no isolation between input and output circuits. These transformers can be used where input and output voltages are very close and space is at a premium.
Input voltage
The supply voltage to the transformer
Output voltage(s)
The output or load voltage(s) from the transformer
Off load and full load
Off load is the where the input to the transformer is powered but no load is being taken. Full load is where the full rated power of the transformer is being taken.
Insulation class
Class A– 105 deg C rating
Class E– 120 deg C rating
Class F– 155 deg C rating

POWER SUPPLIES

Transformer rectifier
A combination of conventional transformer and rectifier to covert AC to DC
Switched mode power supply
A power supply that switches the power to a high frequency to reduce size and weight. AC-DC takes AC power and converts it to DC power. DC-DC takes DC power of one voltage and coverts it to DC power of another voltage.

RFI FILTERS

EMC
Electro magnetic compatibility
RFI
Radio frequency interference
Residential standard and industrial standard
Residential standard to EN 50081-1, industrial standard to EN 50081-2

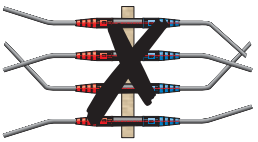
Was ist bei der Planung eines MC®-Steckverbinders zu beachten!

1. Während dem Stecken oder Trennen dürfen keine Querkräfte auftreten.
2. Die Leitungen oder Kabel müssen die richtige Länge haben.

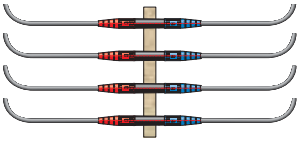
falsch / wrong / faux

richtig / correct

3. Wenn mehrere Steckverbinder nebeneinander liegen, sollte wenn immer möglich eine Kreuzung der Leitungen vermieden werden. Die Leitungen oder Kabel müssen genügend lang sein.

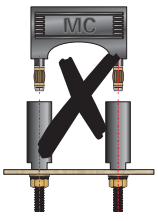


falsch / wrong / faux

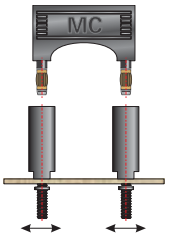


richtig / correct

4. Im Falle von mehrpoligen Steckverbindern sollte immer eine Seite (Stecker- oder Buchsenseite) oder beide Seiten "schwimmend" befestigt sein um alle Konstruktionstoleranzen zu absorbieren.

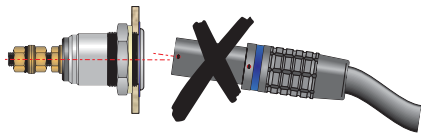


falsch / wrong / faux



richtig / correct

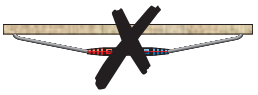
5. Schwere Steckverbinder erfordern eine Abstützung, oder die Steckseite muss "schwimmend" befestigt sein.



falsch / wrong / faux

Points that must be observed when planning the use of an MC®-Connector!

1. No transverse forces must be exerted during connection and disconnection.
2. The leads or cables must be of adequate length.



falsch / wrong / faux

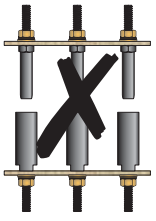
richtig / correct

3. If a number of plug connectors are located side by side, crossing of the leads should be avoided as far as possible. The leads and cables must be of adequate length.

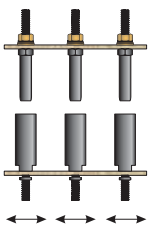
falsch / wrong / faux

richtig / correct

4. In the case of multi-pole plug connectors, at least one side (socket or plug side) or both sides must be provided with a "floating" mounting that is capable of absorbing all design tolerances.

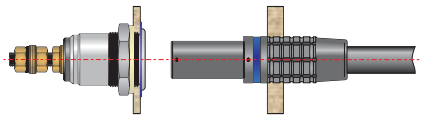


falsch / wrong / faux

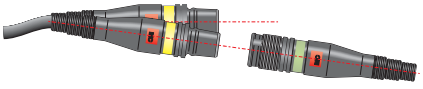


richtig / correct

5. Heavy connectors need to be supported or the plugged side must be float mounted.



richtig mit Abstützung
correct with support
correct avec guidage



richtig mit "schwimmender" Steckseite
correct with "floating mounting"
correct avec montage flottant

Facteurs à prendre en compte dans le cadre de la mise en œuvre d'un connecteur MC®!

1. Lors des phases d'embrochage et débrochage, les efforts radiaux ne sont pas tolérés.
2. Les cordons ou les câbles doivent avoir une longueur appropriée.

falsch / wrong / faux

richtig / correct

3. Lorsque plusieurs connecteurs sont mis côte à côte, le croisement de câbles doit être évité. Les cordons et câbles doivent être de longueur suffisante.

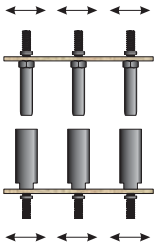
falsch / wrong / faux

richtig / correct

4. Dans le cas de connecteurs multipolaires, afin d'absorber les tolérances de construction, un côté (douille ou broche) ou les deux côtés devrai(en)t être monté(s) flottant(s).

falsch / wrong / faux

richtig / correct



richtig / correct

5. Les connecteurs lourds requièrent un guidage ou un montage flottant.

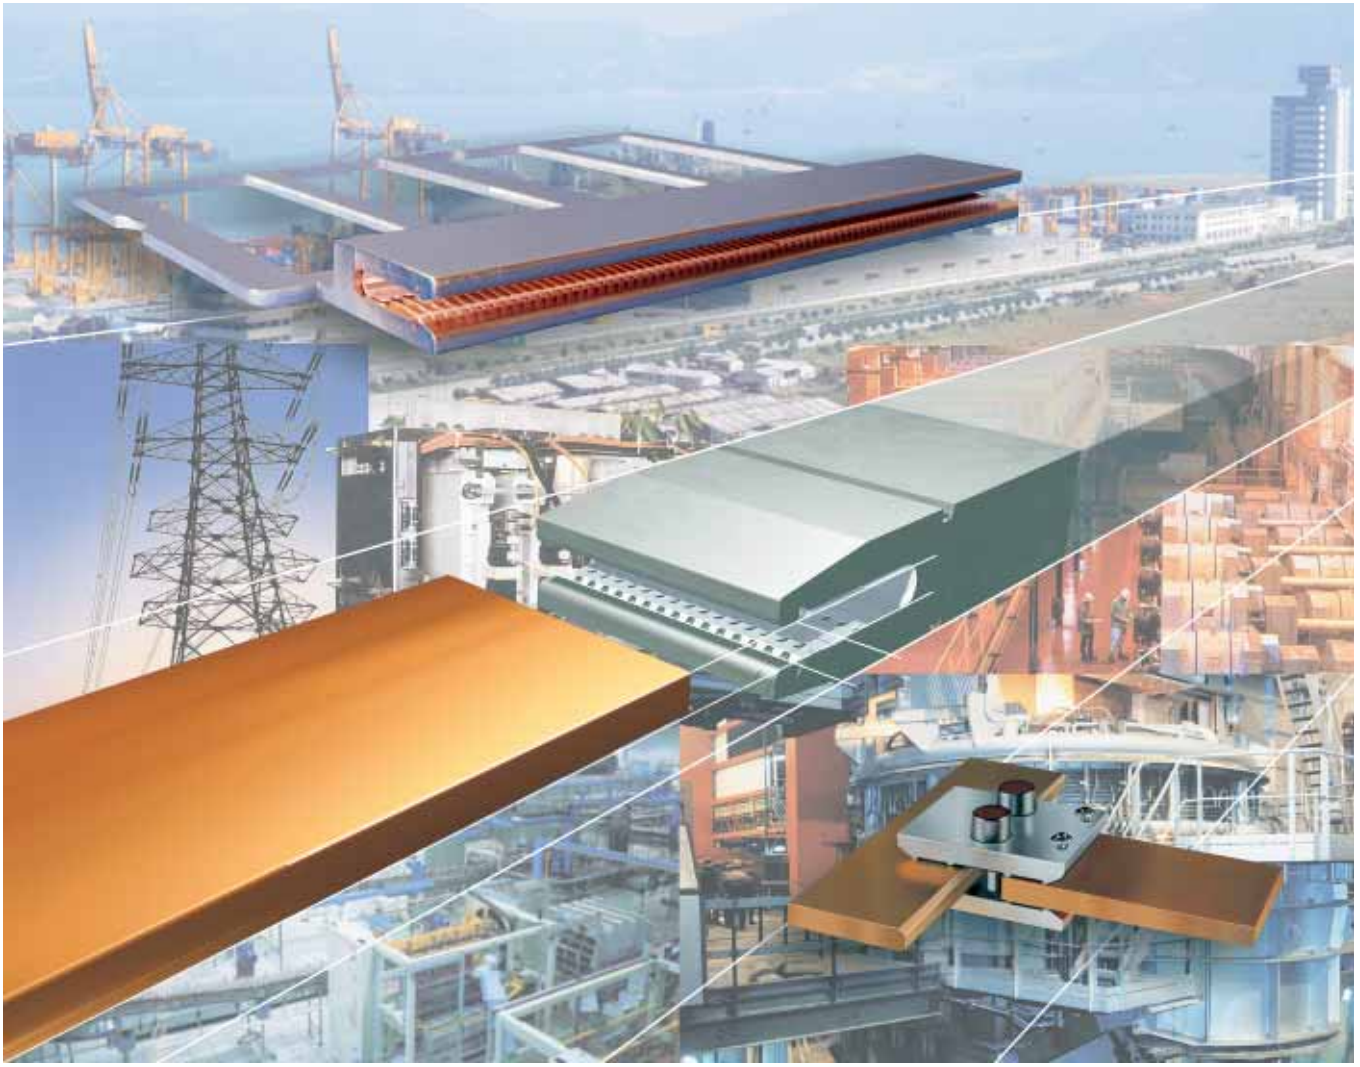
MC-Gabelstecker für Stromschienen

MC-Fork plugs for busbars

Fourches de contact MC pour jeux de barres



Bemessungsstrom bis 1490A

Bemessungsspannung bis 600V

Standardausführungen oder Spezialanfertigungen nach Ihren Vorgaben

Rated current up to 1490A

Rated voltage up to 600V

Standard units or specially designed plugs according to your requirements

Intensité assignée jusqu'à 1490A

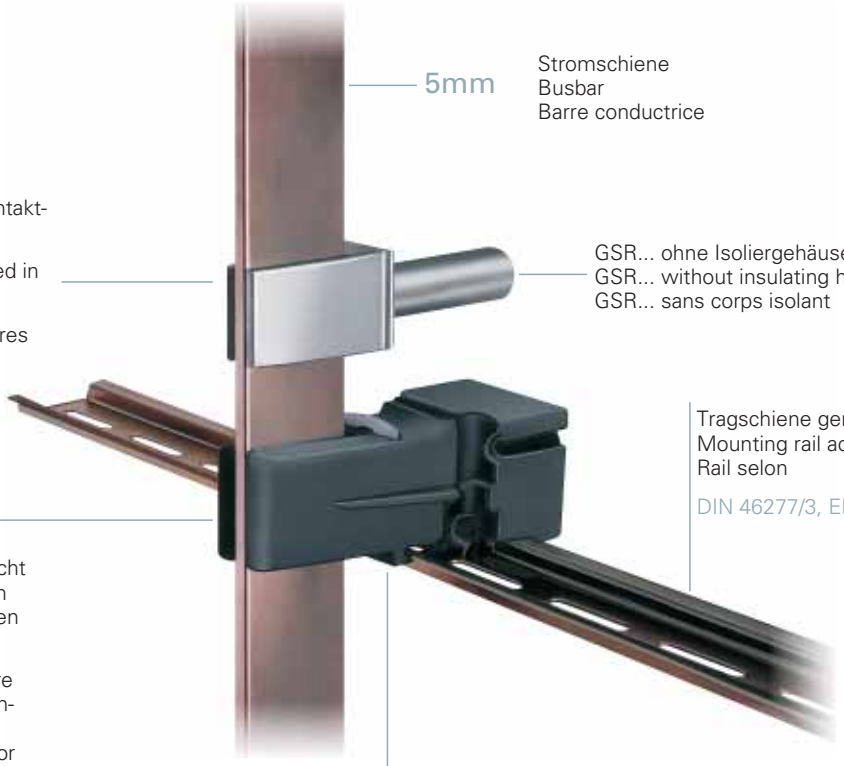
Tension assignée jusqu'à 600V

Pièces standard ou réalisations spéciales selon vos spécifications

Gabelstecker GSR5/... Einführung

Fork plugs GSR5/... Introduction

Fourche de contact GSR5/... Introduction



Stromschienen sollten im Kontaktbereich versilbert sein.

Busbars should be silver-plated in the contact areas.

Les zones de contact des barres doivent être argentées.

Die Gabelstecker GSR... sind geeignet für den Einsatz in nicht korrosiver Atmosphäre, z.B. in Innenanlagen oder geschützten Aussenanlagen.

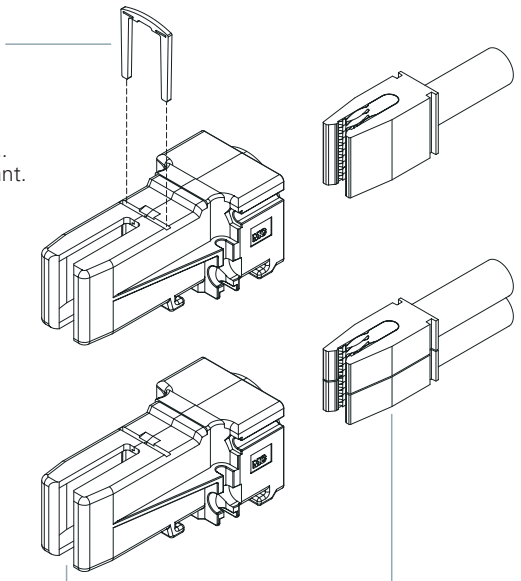
The GSR... fork connectors are suitable for applications in non-corrosive atmospheres, e.g. indoors or in protected outdoor installations.

La fourche de contact GSR... convient aux applications en atmosphères non corrosives, par. ex. en intérieur ou dans des installations extérieures protégées.

Sicherungsbügel hält GSR... in schwimmender Lagerung.

Securing clip holding the GSR... in a floating support.

L'etrier de sécurité maintenant le GSR... de manière à garantir un montage flottant.



Kontaktlamelle LAI, versilbert
MC-Multilam® LAI, silver-plated
Contact à lamelles LAI, argenté

Crimp termination
Raccordement à sertir

Schraubanschluss
Screw termination
Raccordement à visser

Material: Aluminium, versilbert
Material: Aluminium, silver-plated
Matière: Aluminium, argenté

Gehäuse aus PPO (nach UL 94-HB).

Housing made of PPO (to UL 94-HB).

Le Boîtier est en PPO (selon la norme UL 94-HB).

In einem Gehäuse können zwei Gabelstecker mit Breite 12,5mm eingesetzt werden.

Two fork plugs 12,5mm wide can be inserted in one housing.

Deux fourches de largeur 12,5mm peuvent être insérées dans un même boîtier.

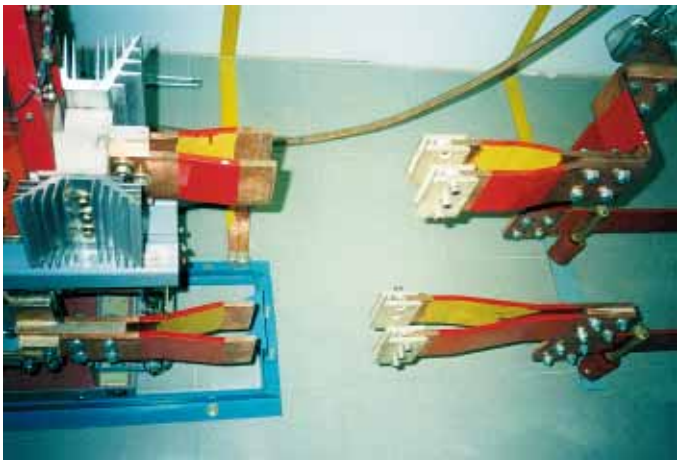
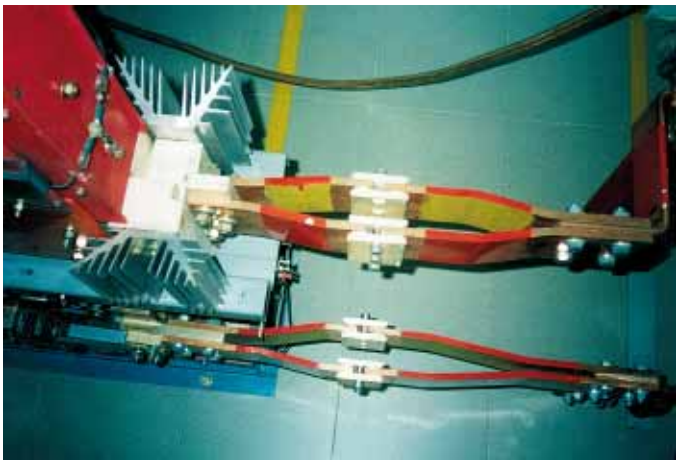
Verbindung zwischen festen und beweglichen Stromschienen.

Application example
Connection between fixed and movable busbars.

Exemple d'application
Connexion entre des jeux de barres fixes et mobiles





MC-Spezialgabelstecker

Gabelstecker werden aus Profilstangen geschnitten, nach der Weiterbearbeitung in der Regel versilbert und dann mit der Kontaktlamelle ausgerüstet. Dadurch sind beliebige Gabelsteckerbreiten herstellbar.
Im Anschlussbereich sind im Rahmen der Profilabmessungen alle Befestigungs- und Anschlussvarianten möglich, z.B. Schraub- oder Crimpanschluss, Absätze, Nuten, Bohrungen, Gewinde usw.
Auf den Seiten 39 und 40 sind einige Beispiele von Spezialanfertigungen zu sehen, für die bereits Werkzeuge bestehen und woraus Gabelstecker herstell- und lieferbar sind.

MC-Special fork plugs

Fork plugs are cut from section rods and after further machining they are as a rule silver-plated and then fitted with an MC Multilam®. This allows fork plugs to be made in any desired width.
In the terminal part of the plug, all types of lead attachment are possible within the limits of the section dimensions, e.g. screw or crimp connection, slots, drilled holes, screw threads etc.
See pages 39 and 40 for some examples of special versions for which tools for the manufacture and supply of fork plugs already exist.

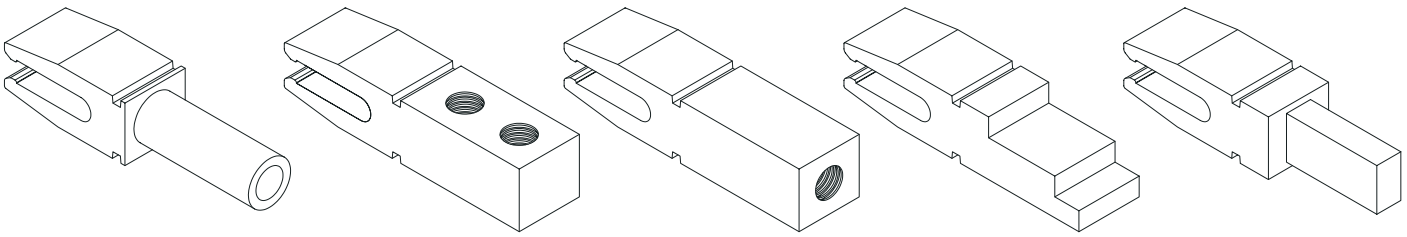
Fourches de contact spéciales

Les fourches de contact sont réalisées à partir d'un profilé, coupé à longueur, argenté, avant d'être équipé d'un contact à lamelles MC. Cette technique de fabrication permet de réaliser des fourches de largeur variable.
De plus, différentes techniques de raccordement peuvent être proposées: sertissage (fût à sertir), vissage (embout fileté ou taraudage), soudure etc.
Les pages 39 et 40 montrent un certain nombre de fabrications spéciales, réalisées par le passé, et pour lesquelles les outillages existent. Ces produits peuvent donc être fabriqués sans difficulté.

Verschiedene Anschluss- und Befestigungsmöglichkeiten

Various termination and fixing possibilities

Diverses possibilités de montage et de raccordement



Multi-Contact hat jahrelange Erfahrung mit Gabelsteckern und ist für solche Kontaktsysteme der ideale Partner.
Fragen Sie uns, unsere Konstrukteure und Techniker beraten Sie gerne.

Multi-Contact has many years of experience with fork plugs, and is the ideal address for such contact systems.
Ask us, our designers and engineers will be pleased to advise you

Multi-Contact dispose d'une longue expérience en matière de fourches de contact et, est pour ce type de système de connexion, votre interlocuteur idéal.
Consultez-nous, nos techniciens vous conseilleront volontiers

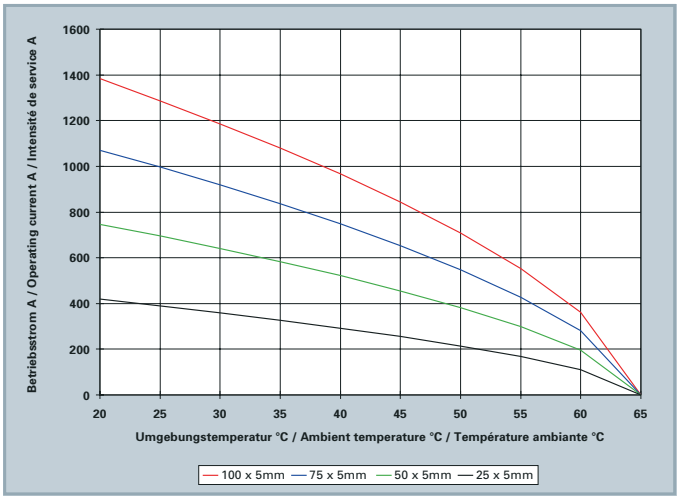
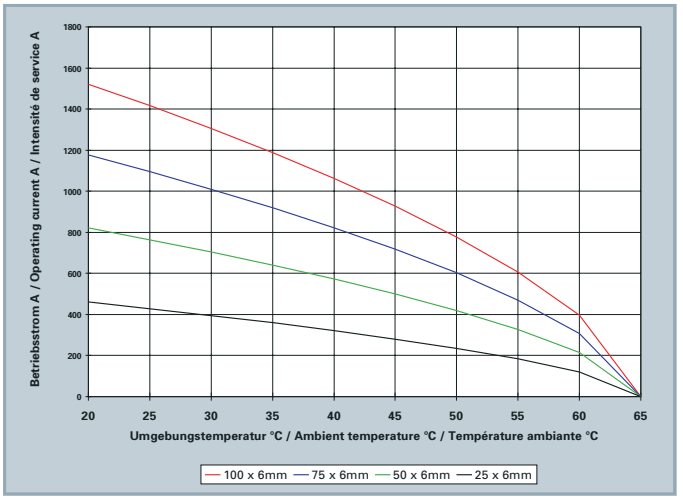
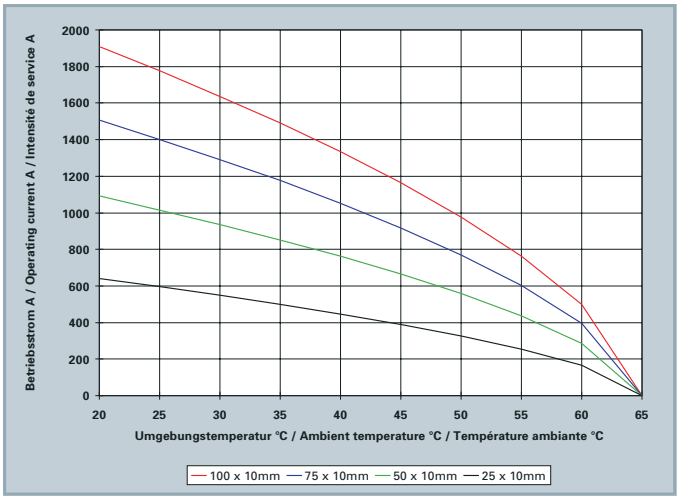
Jeux de barres en cuivre de section rectangulaire selon DIN 43671. Possibilité de contacter des fourches de contact GSRD.







Technische Hinweise

Gabelstecker-Anschlüsse
sind flexibel auszuführen, um die schwimmende Lagerung des Gabelsteckerkörpers nicht zu beeinträchtigen. Beim Einsatz des Gabelsteckers ohne Isoliergehäuse ist mindestens ein Teil schwimmend anzuschliessen und zu befestigen (Stromschiene oder Gabelstecker)

Galvanik
Die zu kontaktierenden Cu- oder Al-Schienen sollten mit einer dünnen Schicht Silber über Nickel überzogen werden.

Schmierung
der Kontaktbereiche (Schiene) mit Kontaktfett wird empfohlen.

Schmiermittel
Von MC empfohlene Schmiermittel:
Metalon HT-1,5 (73.1052)
Kontasynth BA100 Spray (73.1051)*
Gleitfett in SF6-Gas:
Barrierta I EL-102*
Einpress- und Abdichtfett:
Barrierta IS-402 oder IMI-402*
* von Klüber Lubrication, München

Berührungsschutz
Da eine allgemeine Berührungssicherheit der Gabelstecker nicht gegeben ist, sind bei der Montage am Gabelstecker die 5 Sicherheitsregeln nach EN 50110-1 einzuhalten.

Auszugs- und Steckkraft
Angegebene Werte sind Kräfte nach 20 bis 30maliger Betätigung bei dünnem Schmiermittelfilm.

Technical information

Fork plug terminations
have to be made flexible so that the floating mounting of the fork plug body in the insulating housing is not impaired. When the fork plug is used without insulating housing, at least one part must be terminated and fastened in a floating manner (busbar or fork plug).

Plating
The copper and aluminium busbars should be plated with a thin layer of silver over nickel.

Lubrication
of the contact area (busbar) with contact grease is recommended.

Lubricant
MC recommends the following lubricants:
Metalon HT-1,5 (73.1052)
Kontasynth BA100 Spray (73.1051)*
Sliding grease in SF6-gas:
Barrierta I EL-102*
Assembly and sealing grease:
Barrierta IS-402 or IMI-402*
* from Klüber Lubrication, München

Touch protection
The fork plug is not a touchproof safety plug, therefore the 5 safety rules according to EN 50110-1 must be observed when working with it.

Withdrawal and mating forces
The stated figures refer to forces after 20 – 30 mating cycles with a thin film of lubricant present. Forces are greater in the new condition.

Informations techniques

Les raccordements des fourches de contact
doivent être exécutés de façon souple pour ne pas compromettre le montage flottant de la fourche de contact dans son boîtier isolant. En cas de mise en oeuvre d'une fourche de contact sans boîtier isolant, un élément au moins doit être raccordé et fixé de façon flottante (barre conductrice ou fourche de contact).

Traitement de surface
Les barres de connexion en cuivre ou aluminium connectées doivent être argentées (sous-couche de nickel).

La lubrification
des zones de contacts (barres) à l'aide d'une graisse de contact est conseillée.

Lubrifiants
Recommandés par MC:
Metalon HT-1,5 (73.1052)
Kontasynth BA100 Spray (73.1051)*
Graisse pour contact sous gaz SF6:
Barrierta I EL-102*
Graisse d'emmanchement et d'étanchéité:
Barrierta IS-402 ou IMI-402*
* de la société Klüber Lubrication à Munich.

Protection au toucher
Une protection généralisée contre un contact direct de la fourche ne peut être garantie. Lors des manipulations, les 5 directives de sécurité selon EN 50110-1 doivent être respectées impérativement.

Efforts d'embrochage et de débrochage
Les valeurs indiquées sont celles obtenues après 20 à 30 cycles d'embrochage-débrochage, les contacts étant légèrement graissés.

Verwendete Kunststoffe / **Employed plastic materials** / **Matériaux isolants utilisés**

Kurzzeichen Symbol Symbole	Werkstoffbezeichnung Material description Désignation de matière	Temperatur °C Temperature °C Température °C
PC	Polycarbonat / Polycarbonate / Polycarbonat	-80°C...+125°C
ABS	Acrylnitril-Butadien-Styrol-Copolymere	-40°C...+ 90°C
PA66	Polyamid 66 / Polyamide 66 / Polyamide 66	-40°C...+140°C
PPO	Polyphenyloxid / Polyphenylene oxide / Polyphénylène oxyde	-40°C...+140°C

Bemessungsstrom
(IEC 61984) Ströme und Temperaturen wurden bei 20°C Umgebungstemperatur nach 2 Stunden Belastung gemessen. (Endtemperatur: 70°C – 80°C).

Bemessungsspannung (IEC 61984)
Für Steckverbinder von MC festgelegter Wert der Spannung, auf den Betriebs- und Leistungskennwerte bezogen werden.
Anmerkung: Ein Steckverbinder darf mehr als einen Wert der Bemessungsspannung haben.

Rated rurrent
(IEC 61984) Amperages and temperatures were measured at 20°C ambient temperature after 2 hours load. (Final temperature about 70°C – 80°C).

Rated voltage (IEC 61984)
Voltage assigned by MC to the connector and to which the operation and performance characteristics refer.
Note: A connector may have more than one voltage value.

Intensité assignée
(CEI 61984) Les courants et les températures ont été mesurés à une température ambiante de 20°C après 2 heures de charge. (Température finale environ 70°C – 80°C).

La tension assignée (CEI 61984)
Valeur de la tension assignée par MC au connecteur, et à laquelle on se réfère pour le fonctionnement et pour les caractéristiques fonctionnelles.
Note: Un connecteur peut avoir plusieurs tensions assignées.

Kontaktwiderstand
ist der an der Berührungsstelle zweier Kontaktflächen auftretende Widerstand. Sein Wert wird über den gemessenen Spannungsabfall beim Bemessungsstrom berechnet.

Prüfspannung
ist die Spannung, der ein Steckverbinder bei festgelegten Bedingungen ohne Durch- oder Überschlag standhält.

Überschlagspannung
ist die Steh-Wechselspannung, bei der Überschläge entstehen können. Die Werte in den Tabellen gelten zwischen aktiven Teilen und der Befestigungsebene.

Stosskurzschlussstrom
Definition gem. DIN VDE 0102/1.90 (IEC 60909:1988).

Isolationskoordination
gemäss IEC 60664-1, DIN VDE 0110-1. Sie wird mit der Bemessungs-Stossspannung in kV und dem Verschmutzungsgrad angegeben.

Steckzyklen
Die maximale Steckhäufigkeit der Standardsteckverbindung beträgt 1000 bis 5000 je nach Einsatzbedingungen.
Voraussetzung ist ein dünner Schmiermittelfilm auf den Kontakten vor dem ersten Steckvorgang.
Höhere Steckzyklen stellen besondere Anforderungen an die Oberfläche, die Führung und die Schmierung und bedingen immer spezielle Abklärungen und Sonderausführungen.

Schutz gegen elektrischen Schlag
Bei einem ungekapselten Steckverbinder muss der Schutz gegen elektrischen Schlag durch das Endprodukt gegeben sein, in das der Steckverbinder montiert wird.

Crimpanschlüsse
Für die Leiteranschlüsse empfehlen wir für unsere Crimphülsen Sechskantcrimpung. Dornkerbung ist möglich. Unsere Crimphülsen sind ausgelegt für hochflexible Cu-Leitungen. Für andere Leitungen sind spezielle Crimphülsen erforderlich. MC empfiehlt Elpress für alle hochflexiblen Cu-Leiter.

Schraubklemmenanschluss
Bei Anschlüssen von flexiblen oder hochflexiblen Leitern sind Aderendhülsen zu verwenden.

Contact resistance
is the resistance occuring at the contact point of two contact surfaces. Its value is calculated from the measured voltage drop at the rated current.

Test voltage
is the voltage withstood by a plug connector under predetermined test conditions, without breakdown or flashover.

Flashover voltage
is the withstand alternating voltage at which flashover can arise.
The values in the tables apply between active parts and the attachment plane.

Rated peak withstand current
As defined by IEC 60909:1988.

Insulation coordination
according to IEC 60664-1. Indicate the rated surge voltage in kV and the degree of pollution.

Mating cycles
The maximum number of mating cycles of the standard plug-in connections is between 1000 and 5000, depending on duty conditions. Precondition is a thin film of lubricant on the contacts prior to initial mating.
Because higher cycle numbers call for special surface treatment, guiding and lubrication measures, each case must be individually investigated to establish the required measures.

Protection against electric shock
For an unenclosed connector, protection against electric shock must be provided by the enclosure of the end-use-product, in which the connector is installed.

Crimp terminations
For conductor terminations, we recommend hexagonal crimping for our crimp sleeves. Afterwards the sleeve can be notched with a drift. Our crimp sleeves are designed for highly flexible Cu conductors. Special crimp sleeves are required for other types of conductors. MC recommends Elpress for all highly flexible conductors.

Screw clamping terminals
When flexible or highly flexible leads are connected, use wire sleeves.

La résistance de contact
est la résistance qui se crée au point de contact de deux surfaces. Sa valeur est calculée à partir de la chute de tension mesurée sous intensité assignée.

La tension d'essai
est la tension que supporte un connecteur dans des conditions prédéfinies sans que prenne naissance un arc électrique perforant ou de surface.

La tension de claquage
est la tension alternative crête à laquelle des claquages peuvent avoir lieu. Les valeurs mentionnées dans les tableaux sont valables entre les éléments actifs et le plan de fixation.

Intensité de crête
Définition selon CEI 60909:1988.

La coordination de l'isolement
d'après CEI 60664-1. Les valeurs indiques la tension de crête assignée en kV et le degré de pollution.

Cycle d'embrochage-débrochage
Le nombre maximal de cycles d'une connexion standard est de 1000 à 5000 en fonction des conditions d'utilisation, sous réserve de graisser légèrement les contacts avant le premier embrochage.
Des valeurs plus importantes peuvent être atteintes dans certaines conditions: état de surface, guidage, graissage spéciaux. Chaque cas implique une réalisation particulière selon des critères à définir.

Protection contre les chocs électriques
La protection contre les chocs électriques des connecteurs à enveloppe ouverte doit être garantie par le produit fini, dans lequel vient se monter le connecteur.

Raccordements par fût à sertir
Pour le raccordement de conducteurs à ses cosses, MC préconise un sertissage six pans, un poinçonnage étant toutefois possible. Les fûts à sertir sont prévues pour des câbles extra-souples en cuivre. Pour d'autres types de conducteurs, ils est nécessaire d'adapter des fûts spéciaux. MC recommande le système Elpress pour tous ses câbles en cuivre extra souples.

Raccordements à visser
Pour les raccordements de conducteurs souples ou extra-souples, utiliser des embouts de câble.

Technische Anforderungen laut UL Underwriters Laboratories Inc.
zutreffend auf Steckverbinder der Serien
P1/30 (Seiten 8 – 9)
P1/63 (Seiten 10 – 13)
P1/100 (Seiten16 – 19)
P4/50 (Seiten 14– 15)
P4/63 (Seiten 14 – 15).
Technische Daten und Nennwerte: Siehe Seiten mit der allgemeinen Beschreibung der jeweiligen Typen.

Diese Elemente sind mehrpolige oder einpolige Steckverbinder mit Crimp- oder Schraubanschluss, zur Anwendung in elektrischen Geräten.

- Anwendung
  Diese Elemente sind ausschliesslich für die Verwendung in kompletten Geräten bei denen die Annehmbarkeit der Kombination von Underwriters Laboratories Inc. bestätigt wird.
- Untersucht gemäss United States Standard UL 1977, erste Ausgabe, Standard für Komponenten Steckverbinder für den Gebrauch bei Daten, Signal, Steuerungs- und Leistungsanwendungen (und gemäss Canadian National Standard CSA C22.2 No. 182.3-M1).
- Annahmebedingungen
  Um als Bauteil für ein elektrisches Gerät bewertet zu werden, müssen die folgenden Bedingungen erfüllt werden:

1. Diese Elemente sollten nur da eingesetzt werden, wo sie den Strom nicht unterbrechen.
2. Die Eignung der Befestigungsart soll durch die Endnutzung bestimmt werden.
3. Die dielektrische Stehspannungsprüfung (AC) wurde wie in den Tabellen aufgelistet, zwischen benachbarten Polen durchgeführt, siehe unter Prüfspannung.
4. Die Betriebstemperatur dieser Elemente sollte den Temperaturbereich der Isoliermaterialien – wie in der Tabelle angegeben – nicht übersteigen. (Siehe unter Temperaturbereich).
5. Diese Elemente sind nicht geeignet Zugbelastungen von den Leitern aufzunehmen.

Engineering considerations per UL Underwriters Laboratories Inc.
applicable for connectors of series
P1/30 (pages 8 – 9)
P1/63 (pages 10 – 13)
P1/100 (pages16 – 19)
P4/50 (pages 14 – 15)
P4/63 (pages 14 – 15).
Technical data and ratings: See pages with the general description of each type.

These devices are multi-pole or single-pole connectors with contacts employing crimp and screw type terminations intended for use in electrical equipment.

- Use
  These devices are for use only in complete equipment where the acceptability of the combination is confirmed by Underwriters Laboratories Inc.
- Tested according to United States Standard UL 1977, First Edition, Standard for Component Connectors for Use in Data, Signal, Control, and Power Applications. (and Canadian National Standard CSA C22.2 No. 182.3-M1).

- Conditions of Acceptability - In order to be judged acceptable as a component of electrical equipment, the following conditions shall be met:

1. These devices should be used only where they will not interrupt current.
2. The suitability of the mode of installation shall be determined in the end use.
3. The dielectric Voltage Withstand Test (AC) has been conducted between adjacent poles at a potential as stated in the tables, (see under Test voltage).
4. The operating temperature of these devices should not exceed the temperature ratings of the insulating materials as stated in the tables (see under Temperature range).
5. These devices are not intended to absorb any strain from the conductors.

Spécifications techniques selon UL Underwriters Laboratories Inc.
applicables aux connecteurs des séries
P1/30 (pages 8 – 9)
P1/63 (pages 10 – 13)
P1/100 (pages16 – 19)
P4/50 (pages 14 – 15)
P4/63 (pages 14 – 15).
Caractéristiques techniques et valeurs nominales: voir les pages contenant la description générale des types concernés.

Ces éléments sont des connecteurs multipolaires ou unipolaires à raccord serti ou vissé, destinés à être utilisés dans des équipements électriques.

- Application
  Ces éléments sont exclusivement destinés à être utilisés dans des appareils complets dont l'acceptabilité de la combinaison est confirmée par Underwriters Laboratories Inc.
- Contrôle selon United States Standard UL 1977, première édition, norme pour composants de connecteurs destinés à être utilisés dans des applications de transmission de données, de signaux, de commande et de puissance (et selon Canadian National Standard CSA C22.2 No. 182.3-M1).
- Conditions d'acceptation. Pour qu'un composant soit jugé apte à être utilisé dans un appareil électrique, les conditions suivantes doivent être remplies:

1. Ces éléments ne doivent être utilisés que là où ils ne coupent pas le courant.
2. L'adéquation du mode d'installation doit être déterminée par l'utilisation finale.
3. Le contrôle de la tension de tenue diélectrique (AC) a été effectué entre des pôles voisins, comme indiqué dans les tableaux (voir sous tension d'essai).
4. La température de fonctionnement de ces éléments ne doit pas dépasser la plage de température des matériaux isolants comme indiqué dans le tableau (voir sous plage de température).
5. Ces éléments ne sont pas conçus pour reprendre des efforts de traction des conducteurs.

6. Abstände – in Luft und über Oberflächen zwischen stromführenden Metallteilen mit entgegengesetzter Polarität, zwischen stromführenden Teilen und exponierten nicht stromführenden Metallteilen. Diese Elemente eignen sich für Spannungen
   – ≤ 250V basierend auf einem Minimum von 3/64 inch (1,2mm), oder
   – 600V basierend auf einem Minimum von 1/8 inch (3,2mm) Abstände, gemäss UL 1977.

UL 1977:
Abschnitt 17:
Dielektrische Stehspannungsprüfung

Abschnitt 14:
Mech. Spannungsprüfung

Abschnitt 16:
Temperaturtest, untersucht unter Strom auf jedem Kontakt

Abschnitt 19:
Zugentlastungsversuch

UL 498:
Abschnitt 62:
Isolationswiderstands-Test

Abschnitt 63:
Zugentlastungsversuch.

Zusammenfassung der Testergebnisse:
Die Ergebnisse der Untersuchung zeigen, dass die geprüften Steckverbinder den jeweiligen Anforderungen entsprechen und somit als qualifiziert bewertet werden, das -Zeichen zu tragen.

Allgemeine Hinweise

info

Die Überprüfung, ob in speziellen, von uns nicht vorhersehbaren Anwendungsbereichen, die in diesem Katalog gezeigten Produkte anderen als den angegebenen Vorschriften entsprechen, obliegt dem Anwender.

Änderungen / Vorbehalte
Alle Daten, Abbildungen und Zeichnungen in diesem Katalog sind das Resultat sorgfältiger Prüfungen. Sie entsprechen dem Stand unserer Erfahrungen. Irrtum vorbehalten. Ebenfalls vorbehalten sind Änderungen aus konstruktions- bzw. sicherheitstechnischen Gründen. Es ist deshalb ratsam, bei Konstruktionen, in die unsere Bauteile einfliessen, nicht alleine auf die Katalogdaten abzustellen, sondern mit uns Rücksprache zu nehmen, um sicherzustellen, dass die neuesten Daten zur Anwendung kommen. Wir beraten Sie gerne.

6. Spacings provided through air and over surface between live metal parts of opposite polarity, between live parts and exposed non current carrying metal parts. These devices may be used at potentials
   – ≤ 250V based on a minimum of 3/64 inch (1,2mm), or
   – 600V based on a minimum of 1/8 inch (3,2mm). Spacings specified by UL 1977.

Conductor Secureness Test

Test record summary:
The results of the investigation indicate that the connectors evaluated comply with the applicable requirements, and are judged eligible to bear Marking.

General information

info

Users wishing to employ products listed in this catalogue for applications we have not considered are themselves responsible for making certain that the products comply with standards other than those stated.

Changes / Provisos
All data, illustrations and drawings in the catalogue have been carefully checked. They are in accordance with our experience to date, but no responsibility can be accepted for errors.
We also reserve the right to make modifications for design and safety reasons. When designing equipment incorporating our components, it is therefore advisable not to rely solely on the data in the catalogue but to consult us to make sure this information is up to date. We shall be pleased to advise you.

6. Distances dans l'air et lignes de fuite entre des pièces métalliques actives de polarité opposée entre des pièces actives et des pièces métalliques exposées, non actives. Ces éléments peuvent être utilisés à des tensions
   – ≤ 250V sur la base d'un minimum de 3/64 pouce (1,2mm) ou
   – 600V sur la base d'un minimum de 1/8 pouce (3,2mm). Distances selon UL 1977.

UL1977:
Chapitre 17:
Contrôle de la tension de tenue diélectrique

Chapitre 14:
Essai de relaxation

Chapitre 16:
Essai thermique, contrôlé sous charge sur chaque contact

Chapitre 19:

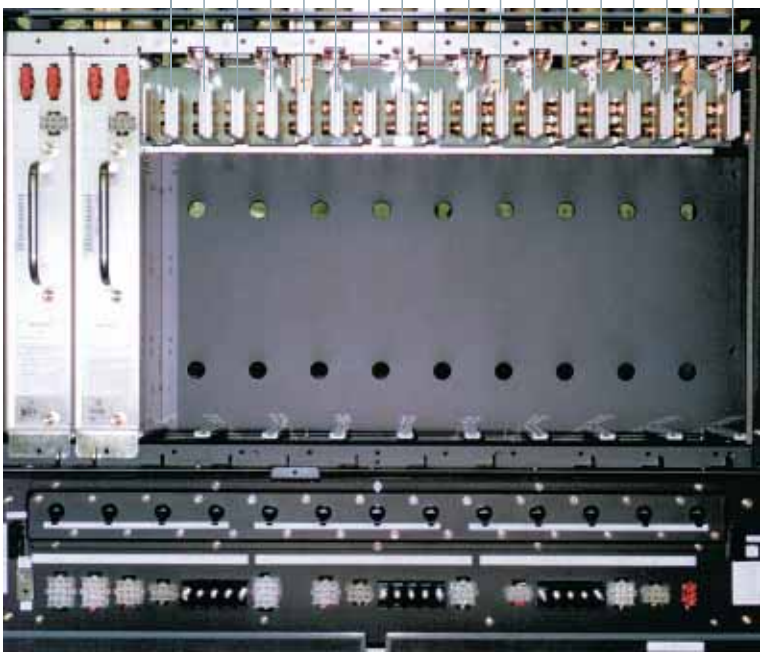
MC contacts for enduring stability

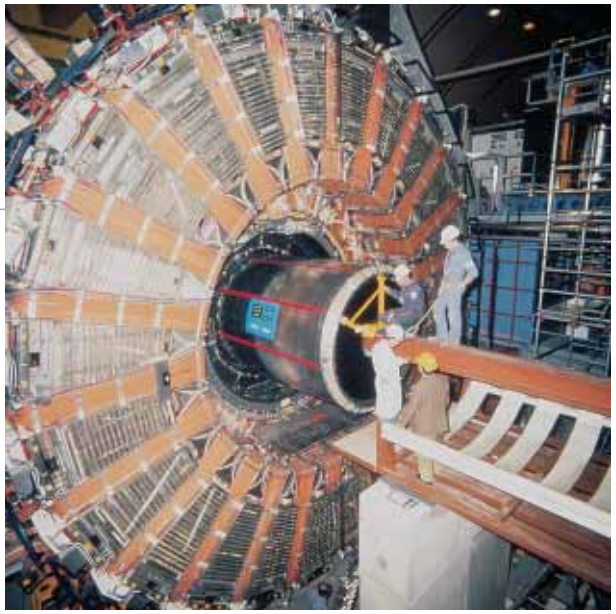
Contacts MC, stables à long terme

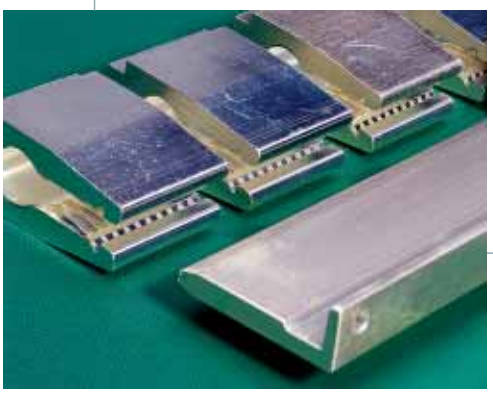


Gabelstecker, die ideale Lösung für die Einschubtechnik

Fork plugs, the perfect solution for slide-in rack connections

Les fourches de contact, la technique de connexion idéale pour les tiroirs embrochables





Noch eine praktische Lösung mit Gabelstecker für die Einschubtechnik

Another practical solution with fork plugs for slide-in rack connection

Encore une bonne solution de connexion pour tiroirs embrochables basée sur l'utilisation de fourches de contact

MC-Kontakte sind zuverlässig

MC contacts are reliable

Les contacts MC sont fiables

Gabelstecker (Gussteil mit Lötanschluss) für die Leistungselektronik

Fork plug (cast part for solder termination) for power electronics

Fourche de contact pour l'électronique de puissance (à souder sur CI)

Gabelstecker mit Anschlussbuchse

Fork plug with connection socket

Fourche de contact avec douille de raccordement

Gabelstecker-Drehkontakt für einen Schiffsruder-Antrieb

Fork plug rotating contact for a ship's steering gear

Fourche pour contact tournant (principe disque/fourche) pour des propulsions de navires de type POD

MC Kontakte haben niedrige Übergangwiderstände

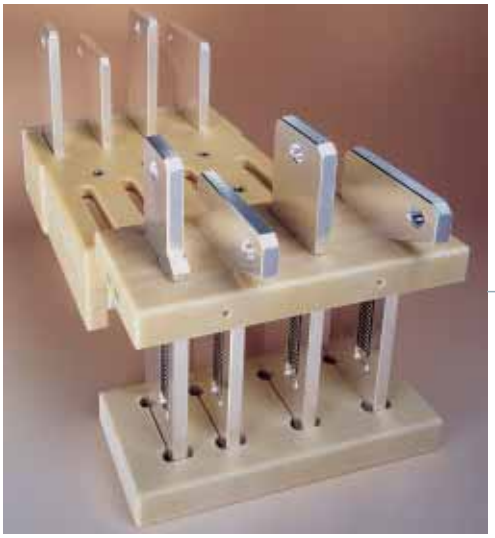
MC contacts have low contact resistances

Les Contacts MC ont de faibles résistances de contact

Gabelstecker-Einheit zur Rührspulenkontaktierung in einer Stranggussanlage (800A)

Fork plug unit in a connector for agitation coils in a continuous casting plant (800A)

Module de connexion composé de plusieurs fourches de contact pour brasseur magnétique de haut-fourneau (800A)



Gabelstecker mit Kunststoffführungen und der besonders leistungsstarken Kontaktlamelle LA-CU für einen Drehkontakt

Fork plug with plastic guides and the extra heavy-duty high-power Multilam® LA-CU for rotary connection

Fourches équipées de patins de guidage en matière plastique et des contacts à lamelles particulièrement performants du type LA-CU pour un contact tournant

MC-Kontakte haben einen hohen Qualitätsstandard

MC contacts have a high quality standard

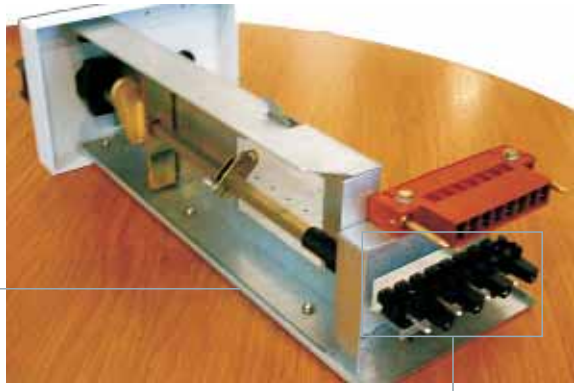
Contacts MC de qualité supérieure

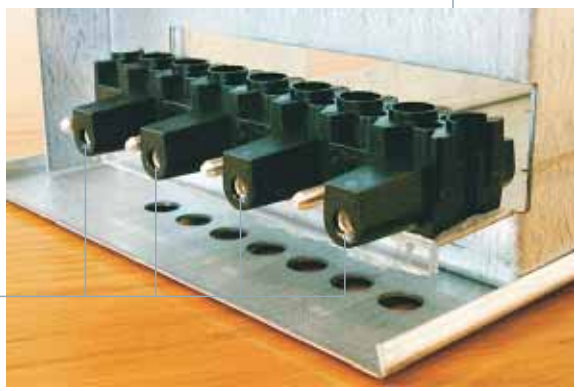
Gabelstecker mit abgedichtetem Kontaktmodul MC-SEALconTACT welches eine Kontaktierung von blanken unbearbeiteten Stromschienen ermöglicht

Fork plug with a sealed contact module (MC-SEALconTACT) which allows contact on the connection side with unplated, unmachined busbars

Fourche de contact équipée au niveau du socle de raccordement d'un module de contact étanche (MC-SEALconTACT) pour un montage direct sur des jeux de barres à l'état brut (non reprises et non traitées)

SEALconTACT





P1/63... in einem Einschub

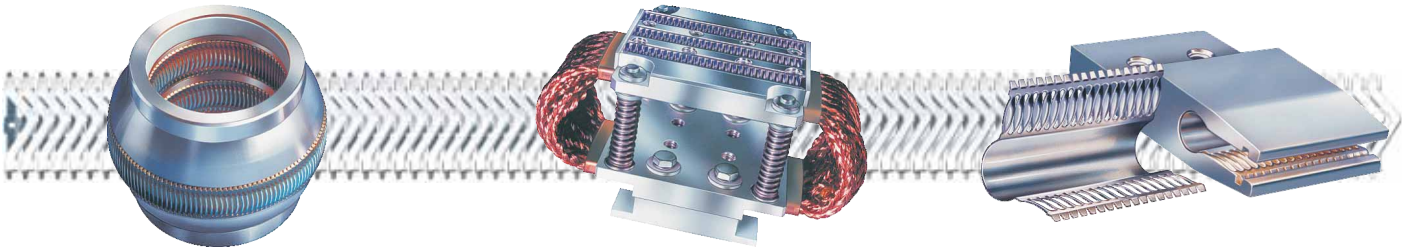
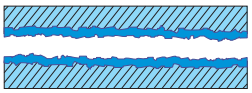
MC®-Kontaktlamellen
Das unübertroffene Kontaktsystem



Kontaktlamellen sind speziell geformte Hartkupferblechstreifen.
Multi-Contact bietet ein ganzes System von Kontaktlamellen, das laufend, anhand neuer Projekte erweitert wird.



Kontaktteile mit Fremdschicht

Contact pieces with pollution film

Pièces de contact avec une couche d'oxydation

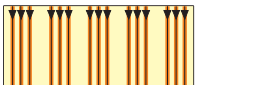
Die Kontaktlamellen sind auf Bändern angeordnet und erlauben damit eine Kontaktgabe über eine Vielzahl von definierten stromführenden Pfaden.
Jeder Lamellensteg bildet eine unabhängige Strombrücke und die vielen parallel angeordneten Lamellenstege vermindern damit den Kontaktwiderstand des Gesamtkontaktes erheblich.

Eigenschaften:
- Minimaler Kontaktwiderstand
- Minimaler Spannungsabfall
- Erlaubt hohe spezifische Stromdichte
- Grosse Anzahl Kontaktpunkte
- Selbstreinigungseffekt im Kontaktbereich
- Minimaler Leistungsverlust

Vorteile:
- Minimale Erwärmung
- Energiesparend
- Weniger Materialkosten
- Hohe Stromtragfähigkeit
- Geringe Wartungskosten
- Tausende von Steckzyklen möglich
- Lange Lebensdauer der Produkte

MC®-Multilam®
The unsurpassed contact system

MC-Multilams® are specially formed strips of hard copper.
Multi-Contact can supply a complete range of these Multilams® that is being continually expanded to meet the needs of new projects.



Der Idealfall: viele Kontaktpunkte

The ideal case: many contact points

Le cas idéal: de nombreux points de contacts

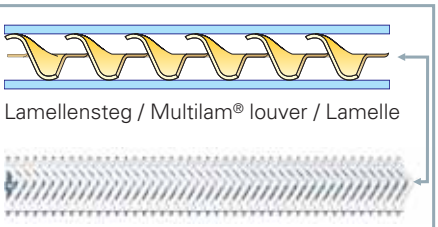
The contact louvers are arranged on strips, thus allowing contact to be made over a large number of defined current-carrying contact surfaces.
Each louver forms an independent current bridge and the many parallel louvers considerably reduce the overall contact resistance.

Features:
- Minimal contact resistance
- Minimal voltage drop
- Allows high specific current density
- Large number of contact points
- Self-cleaning in contact area
- Minimal power loss

Benefits:
- Minimal heat build-up
- Energy savings
- Lower material costs
- High specific current capacity
- Low maintenance costs
- Perfect function over thousands of mating operations
- Longer product life

Contacts à lamelles MC®
Le système de contact inégalé

Les contacts à lamelles sont des interfaces de contact spécialement formées en alliage de cuivre. Multi-Contact propose une large gamme de contacts à lamelles, qui s'étoffe régulièrement au travers de nouveaux projets.



MC-Kontaktlamellen mit vielen Kontaktpunkten

MC-Multilam® with many contact points

Contact à lamelles MC avec de nombreux points de contact

Les lamelles de contact sont disposées en parallèle sur une bande, permettant ainsi la réalisation d'un contact au travers d'une multitude de points de contact, parfaitement définis.
Chaque lamelle forme une ligne de courant indépendante, de sorte que la multiplication de ces lignes en parallèle conduit à une diminution sensible de la résistance du contact complet.

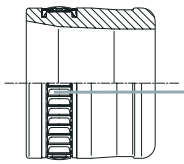
Caractéristiques:
- Résistance de contact minimale
- Chute de tension minimale
- Forte densité de courant
- Grand nombre de points de contact
- Effet autonettoyant dans la zone de contact
- Perte de puissance minimale

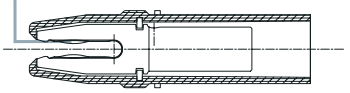
Avantages:
- Réduction de l'échauffement
- Economies d'énergie
- Economies de coûts de matière
- Haute conductibilité électrique
- Coûts de maintenance réduits
- Endurance: des milliers de cycles d'embrochage possibles
- Durée de vie prolongée

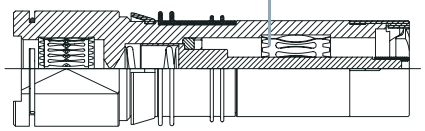
MC®-Kontaktlamellen
Vielseitige Grundlage neuer Entwicklungen

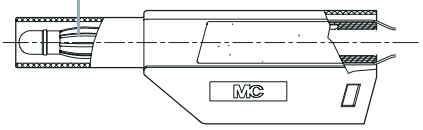
MC®-Multilam®
The versatile basis for new developments

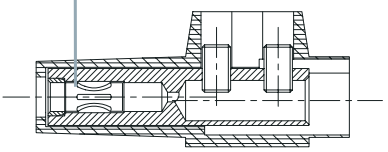
Contacts à lamelles MC®
La base de multiples nouveaux développements











In unserer Schrift **Multilam***Technology*, die Sie bei uns anfordern können, finden Sie zusätzlich viele nützliche Informationen.

You will find much more useful information in our publication **Multilam***Technology*, which we will supply on request.

Vous trouverez de nombreuses informations complémentaires dans notre brochure **Multilam***Technology*.

FRIEDHELM LOH GROUP

RITTAL®

We look to the future

Rittal is already working enthusiastically on the solutions of the future. This is our tradition, and is the key to our **innovativeness** in the field of technology packaging. Experience the future of **communications technology and automation** with Rittal, trendsetters in holistic solutions. Setting trends means understanding customers, creating future-safe solutions, and being very forward-thinking. Industrial Ethernet, nano-spray-finishing and Rittal Liquid Cooling Systems are just some of the examples which impressively underscore our commitment to this principle.

With **fascinating future,** progress becomes possible – this is our mission.

The Rittal corporate principle
We are aware of our responsibility to the environment and the world in which we live. We want to help structure and improve them!

RITTAL®

It is only through **intelligent production techniques** that pioneering ideas acquire a clear added value. Mindful of this fact, Rittal has always chosen innovative paths and produced modern products in superb quality, whilst exploiting the cost benefits of mass production.

We produce the future

For example, the patented section in the TS 8 frame is **16-fold profiled** in a special technique. All 12 frame parts are linked together in a combined **seam and welding robot system.** Exceptionally smooth enclosure seams are achieved with the **powder plasma welding technique.** In order to achieve highly practical paint structures and enhanced corrosion protection, Rittal uses **electrophoretic dipcoat-priming** developed for the automotive industry, as an outstanding feature of Rittal surface quality! In addition, the techniques of **zinc phosphating** and **aluminization** ensure exceptional longevity and resistance. A state-of-the-art powder coating technique enables us to realise **customised colour changes in next to no time.** In this way, we produce a decisive, lasting added value for your application.

The Rittal corporate principle

We concentrate all our efforts on perfect, cost-effective production of our products, professional marketing, and reliable delivery!

RITTAL®

We offer forward-thinking information

Rittal offers product selection support from a number of information platforms which systematically complement one another: Our comprehensive Catalogue, the compact CD-ROM with useful links, and the Rittal website, which is always up-to-date. This enables you to compile your own individual system solution very easily, selectively and quickly.

Navigation through the Catalogue is now even easier, because it is structured into three parts:

– **Range overview (A)** with the relevant product group at a glance,

– **Order information (B)** containing full details, and

– **The technical part (C)** containing detailed dimensional drawings.

The CD-ROM features cross-references to take you, for example, straight to the matching system accessories at the click of a mouse, while Model Numbers offer direct links to the Internet for standardised CAD files, precise assembly instructions, and up-to-date approvals.

We call it the **Triple C:**

Complete,
Compact,
Comfortable.

All three information platforms from Rittal – Catalogue, CD-ROM and Internet – will guide you swiftly to the appropriate solution for your particular task. In this way, you benefit from forward-thinking information and navigation.

The Rittal corporate principle

We view our customers as partners who determine the success of our company:

- We must find solutions to our customers' requests and problems, because our customers are our livelihood and our safeguard for the future!
- Our products must offer clear benefits and advantages for the customer, particularly in terms of quality, technical execution, product selection and deliverability.

Dialogue with us offers exciting prospects

Your application demands solutions for specific tasks. As such, **dialogue with our customers** is always our primary source of information when devising new products and services. To this end, we utilise all the major platforms to forge long lasting relationships with our customers – national and international trade fairs, competence days, and the new media.
We continue this dialogue throughout every phase of the process, from the initial idea, to development of a solution, through to the use of our products.

Pre-sales service: Information, advice, planning aids, analyses.

Sales service: Online shops, project planning, prototype construction, tests, assembly, warehousing and delivery service.

After-sales service: Training, commissioning, maintenance, repair and spare parts service.

Constructive dialogue creates shared prospects for all of us.

RITTAL®

There is a demand for the **holistic solutions** of modern technology packaging **in all segments of industry.**

All areas of the system, such as enclosures, climate control, power distribution, racks and monitoring, are expertly coordinated with one another. Synergies are utilised to perfection. Rittal provides you with intelligent product packaging when technologies become merged, such as **communications technology** and **automation.**

The provision of cross-industry, complete solutions, e.g. for industrial automation, mechanical engineering, electronics, networks and servers, fixed network and mobile communications, transport technology and facility management, is our mission.

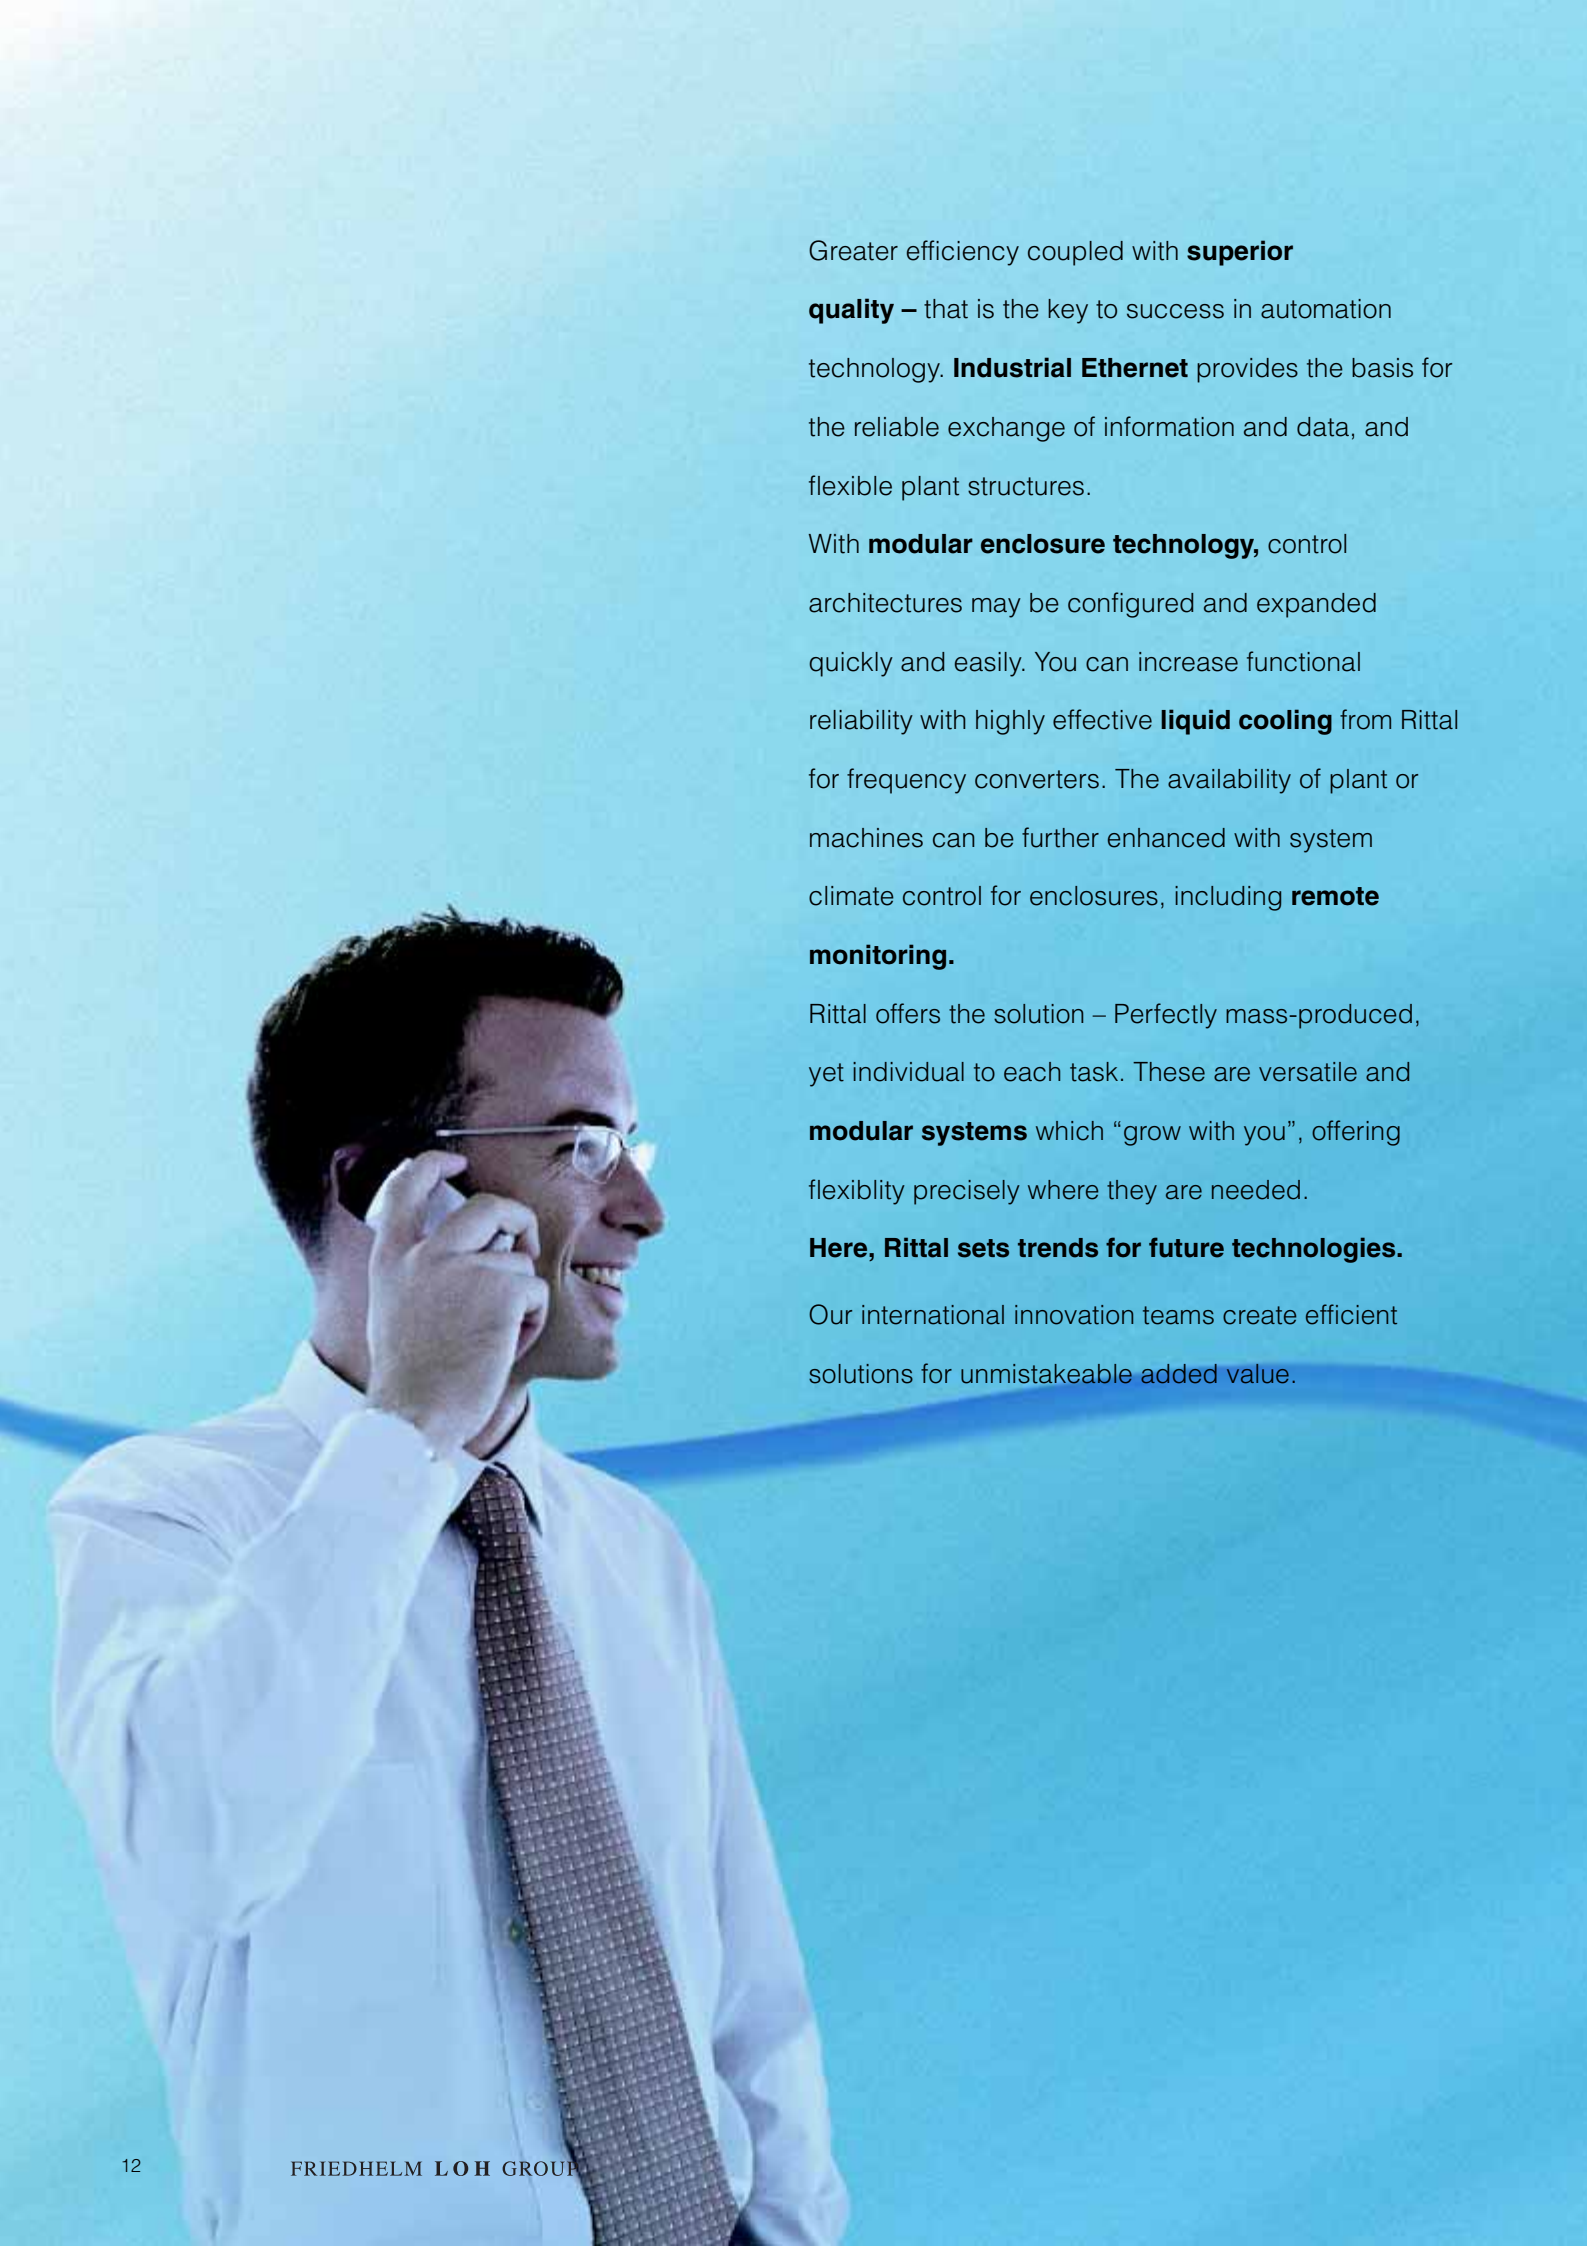
Thanks to perfect interplay between the many different facets, solutions become complete.

We say, “Complete is better!”

The Rittal corporate principle

Perfect mastery of our day-to-day business safeguards our existence and enables us to master the requirements of the future!

RITTAL®



Greater efficiency coupled with **superior quality –** that is the key to success in automation technology. **Industrial Ethernet** provides the basis for the reliable exchange of information and data, and flexible plant structures.

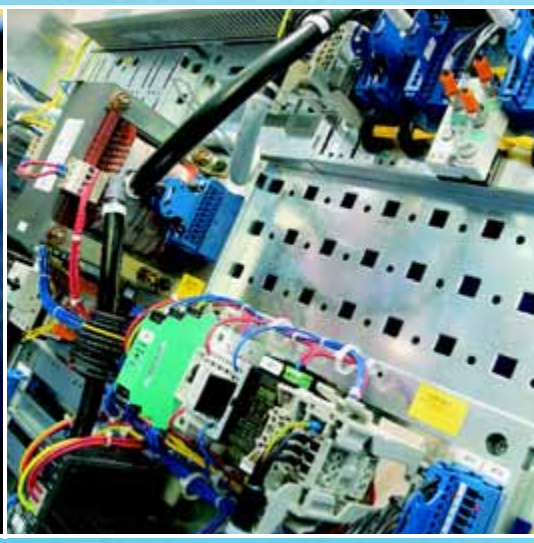
With **modular enclosure technology,** control architectures may be configured and expanded quickly and easily. You can increase functional reliability with highly effective **liquid cooling** from Rittal for frequency converters. The availability of plant or machines can be further enhanced with system climate control for enclosures, including **remote monitoring.**

Rittal offers the solution – Perfectly mass-produced, yet individual to each task. These are versatile and **modular systems** which “grow with you”, offering flexiblity precisely where they are needed.

Here, Rittal sets trends for future technologies.

Our international innovation teams create efficient solutions for unmistakeable added value.

We safeguard efficiency



The Rittal corporate principle
We need to be faster and better than the competition.
We must prove this competitive lead to our customers on a daily basis.

We open up new horizons full of opportunities

Innovative information technologies with an **extremely high data throughput** – in the mobile communications, network and server sectors, as well as in biotechnology and medical engineering – demand holistic enclosure solutions. Rittal offers enclosures with a modern layout, **integral power modules, effective cooling** and **super-fast backplanes.** AdvancedTCA Shelves from Rittal are one such example.

Our dynamic **Liquid Cooling technology** facilitates maximum blade server performance – with a flexible choice of several cooling systems. With Rittal, you can always be sure of getting the right solution, from a matching 482.6 mm (19″) rack, to an efficient IT rack, through to modular components for the modern IT infrastructure. Take advantage of **Rittal's expertise as a complete provider** for packaging tasks in information technology and automation – including a comprehensive service concept. We offer expert advice, planning support and test services in accredited Rittal laboratories, through to CFD analyses – take advantage of our know-how, and ensure maximum availability in all areas.

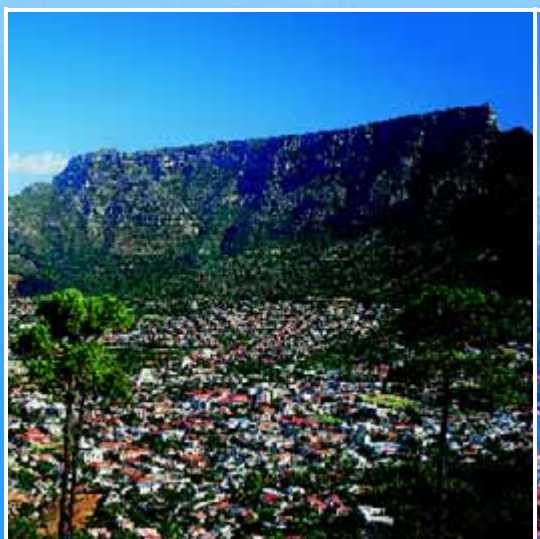
High technological demands reveal new opportunities, which are transformed into solutions with clear benefits.

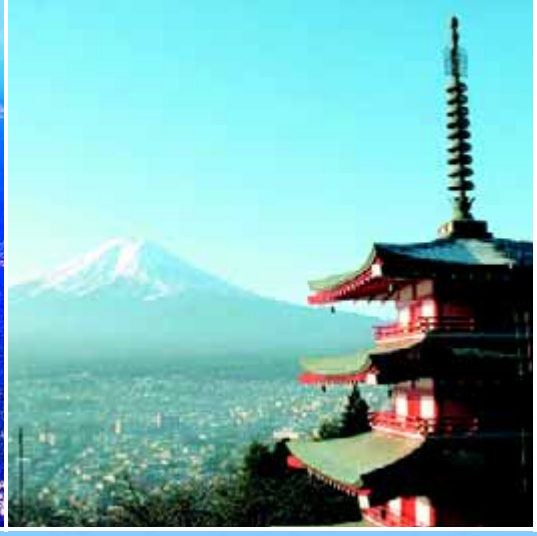
The Rittal corporate principle

We are aware of the correlation between qualification, motivation and company success; in other words, we encourage our employees to participate in training, and involve them in our overall success.

The Rittal corporate principle

Our aim is to establish long-term partnerships with our suppliers; the pre-requisite for this is to remain competitive in terms of quality, delivery service and price, and optimum problem-solving!





Worldwide, we are on your doorstep

Customer proximity is a key Rittal philosophy:

With global solutions, with local advisors, and with **100 % availability** of our products and services.

19 production sites, 50 subsidiaries, 70 agents and 150 distribution and logistic centres – around the globe – are testimony to our consistent customer orientation.

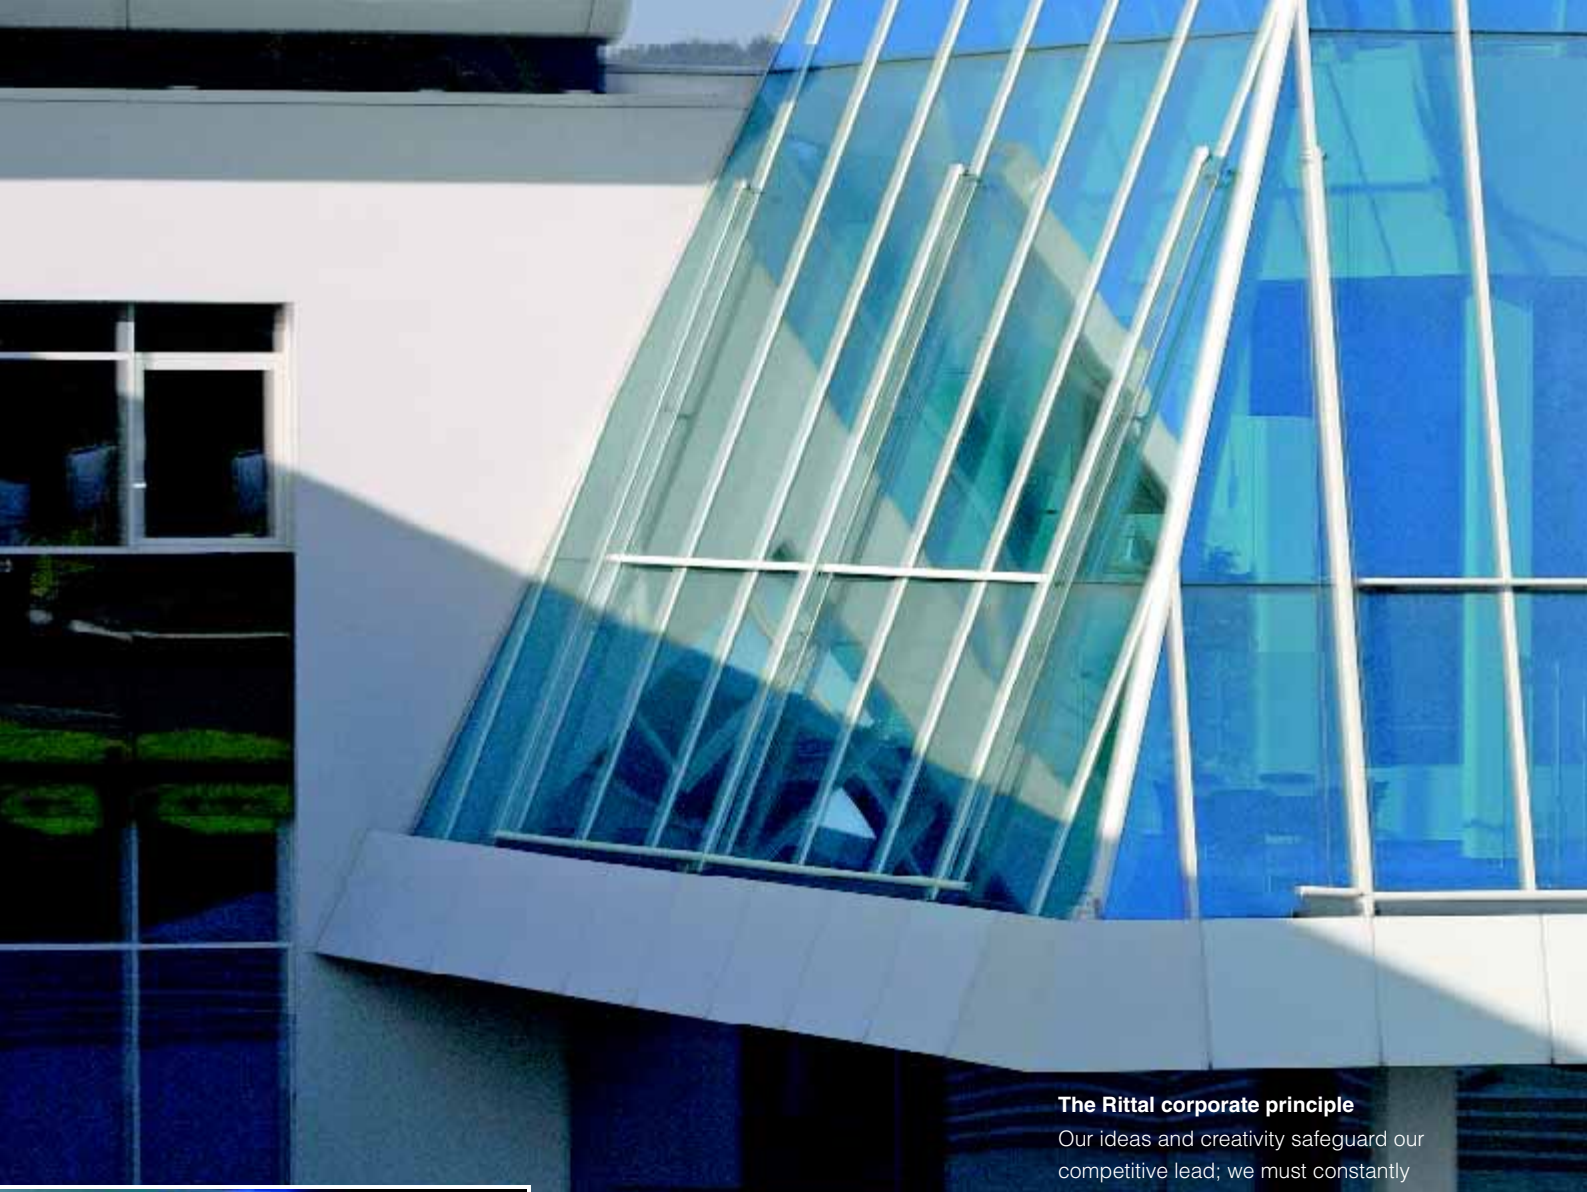
When it comes to technical applications, quality and reliability, Rittal is your first choice.

All our products meet the very latest technical findings, globally recognised quality standards with certifications, and **internationally valid approvals.**

Our comprehensive Total Quality Management system ensures consistently high product quality worldwide.

We meet all your requirements, globally and locally, in close partnership with our customers – our advantage, your value-added benefit.

RITTAL®



The Rittal corporate principle
Our ideas and creativity safeguard our competitive lead; we must constantly search for new inspiration and ideas, and implement these in a consistent and professional manner!

In the IT sector, transport technology, automation industry and beyond, **Rittal solves all tasks for a wide variety of application areas – always with an eye on the future.**

Over 8,000 employees worldwide are thinking and acting on your behalf, with precise knowledge of the industry, practical expertise, curiosity and far-sightedness.

Progress is possible – with Rittal, in all sectors and for all applications.

Over 8,000 employees committed to a fascinating future

For experts and beginners alike, the product overview facilitates **fast selection of individual product groups within the range.**

For example, the appropriate dimensions of an enclosure or the correct cooling output of a climate control component are easily ascertained.

For all Rittal components of technology packaging, power supply, climate control and monitoring technology, a comprehensive pre-selection is provided.

Industrial Enclosures

Industrial enclosures – reap the benefits of the extensive Rittal enclosure range:
Perfect, cost-effective solutions to suit every application. All in all, the wide range of sizes, the application-oriented choice of materials, the tailoring to specific application areas, the modular range of system accessories and compatibility with all other Rittal lines gives Rittal customers a competitive lead from a single source.

Holistic solutions to perfection:
- Small enclosures
- Compact enclosures
- Compact system enclosures
- Large enclosures
- Industrial workstations
- PC enclosure systems
- Console systems

Detailled information may be found on Catalogue pages 96 – 295 and on our website at www.rittal.com

Power distribution – the benefit lies in the system
Modern power distribution systems are becoming ever more powerful. For this reason, users demand the security of internationally recognised and approved power distribution components.
Rittal provides the switchgear designer with innovative systems which conform to the relevant regulations.
Type testing on short-circuit resistance, which is performed in accredited laboratories, provides an impressive testimony to the suitability of Rittal busbar systems.

Successful solutions for industrial power distribution
- SV busbar systems
- SV connection systems
- SV bus-mounting fuse bases
- NH bus-mounting on-load isolators
- NH fused isolators
- SV component adaptors
- SV-TS 8 and Maxi-PLS
- ISV distribution enclosures

Detailed information may be found on Catalogue pages 298 – 420 or refer to our website: www.rittal.com

The current status of approvals can be found on our website: www.rittal.com

Fully assembled, pre-wired and tested.
Rittal Electronic Systems offer "complete know-how" in the field of electronic packaging. From variable subrack systems, to a variety of enclosure solutions, operation and monitoring solutions, backplanes, power supplies, and climate control components, through to complete microcomputer systems for VMEbus, CompactPCI, ATCA or ATX.

The complete range for electronic packaging

- Microcomputer systems
- Industrial PC systems
- 19″ keyboard rack
- Power supplies
- Backplanes
- Subrack systems
- System enclosures/instrument cases

A full range of accessories and detailed information may be found on Catalogue pages 422 – 577 or refer to our website: www.rittal.com

[2] To order EMC version, please add extension .700 to the Model No.

System climate control creates the correct ambient conditions for every application, particularly for sensitive electronics.
A broad selection of cooling units, recooling systems, heat exchangers, fan-and-filter units and enclosure heaters protects against adverse physical and thermal influences.
This is supplemented by a versatile range of accessory components.

With a full advisory service and its PC software package Rittal Therm, Rittal will help you to select the correct climate control unit to suit your precise requirements.

Enhanced operational reliability and a longer service life for electronics

- Climate controlled enclosure systems
- Cooling units
- Recooling systems
- Heat exchangers
- Fan-and-filter units
- Roof-mounted fans
- Rack-mounted climate control
- Enclosure heaters
- Cooling

Detailed information may be found on catalogue pages 578 – 675 or refer to our website: www.rittal.com

IT solutions – the perfect, customised solution
With emerging technologies, network technology places ever increasing demands on the infrastructure at the "information hub", and hence on competent system suppliers.
Whether you are after a small floor distributor for a fibre-optic network or a combined distribution and component enclosure, the Rittal range has the optimum practical system solution to solve every problem, whatever the application.

- Networking
- Server racks
- Monitoring
- Terminals
- Telecom

Detailed information may be found on catalogue pages 676 – 811 or refer to our website: www.rittal.com The latest status of approvals may be found on the Internet at: www.rittal.com

Communication Systems – Perfect protection for all weathers
Rittal's expertise in the fields of enclosure technology, climate control, security management and system integration is combined in standard solutions and customised outdoor systems. The specific requirements of mobile communications, IT technology, environmental technology and power distribution are accommodated on a project-specific basis.
High-quality materials such as aluminium and zinc-plated sheet steel combine corrosion resistance and protection from vandalism with UV stability and a high level of RF attenuation.

Individual complete solutions using mass-produced modules:
- CS Toptec (twin-walled)
- CS wall-mounted enclosure (enclosure within an enclosure)
- CS compact enclosure (single-walled)
- CS basic enclosure (single-walled)
- CS modular enclosure (twin-walled)
- CS Indoor Racks
- CS Outdoor climate control

Detailed information may be found on catalogue pages 812 – 831 or refer to our website: www.rittal.com

Rittal has all the elements of **packaging technology for the factory of the future,** even in the toughest ambient conditions. Current examples include: Compact, secure technologies for **Industrial Ethernet,** enabling simple modifications to production procedures.

Modular enclosure technology is advantageous in terms of the rapid assembly and adaptation of controllers.

At the human/machine interface, your ergonomic requirements are precisely realised with the **Command Panel and Industrial Workstations**.

High-quality products + matching accessories + modular assembly

= perfect solutions at an inexpensive price.

Small enclosures

Features

This is application-oriented diversity:

6 enclosure types in 4 materials and more than 100 sizes.

With

- Fibreglass-reinforced polycarbonate
- Cast aluminium
- Sheet steel with high-quality coating
- Stainless steel

every aspect of your requirements is met.

It goes without saying that all this is achieved in Rittal's familiar high quality, and to suit every security requirement.

And for special requirements:

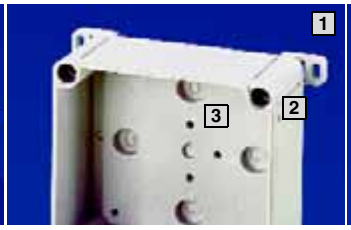
Stainless steel enclosures, see page 268 – 272.

Ex enclosures, see page 286 – 288.

EMC enclosures, see page 289 – 290.

Polycarbonate enclosures

Hinges available as accessories. Cover screw prepared for a lead seal.



3 attachment options:

1 Wall mounting brackets
2 Below the cover screws
3 Knockouts in the enclosure

Enclosures with knockouts for metric screw fastening and assembly are available on request.

Cast aluminium enclosures

Some holes tapped for the attachment of support rails, mounting plates or earthing systems.

Cover with captive screws.
Wall mounting optionally
- below the cover
- via wall mounting bracket (available as an accessory).

Hole drilling and assembly of the cable glands (see page 972) available on request.

Features

Terminal boxes KL with and without gland plate

NEW: Cover may be opened and securely locked in a flash, with the new quick-action screw. $^1/_4$ turn instead of thread ensures correct contact pressure of the seal.

Support rail TS 35/7.5 for better use of the depth, optionally attached at the bottom or via the profile strips on both sides with self-tapping screws.

Electrophoretic dipcoat priming and powder coating – reliable surface protection thanks to even coating in all the corners and edges.

E-Box

The “E-Box” supplied as standard with mounting plate, 180° hinge and double-bit lock system.

Lock insert exchangeable or prepared for a lead seal with lock cover as an accessory – see page 890.

The highly elastic foamed-in PU seal guarantees perfect sealing. High protection category IP 66 to EN 60 529/10.91.

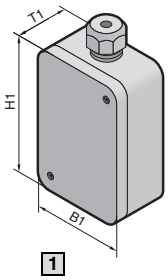
Bus enclosure

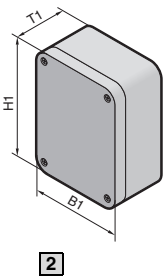
Door hinged at the bottom or side. Hinges with 180° opening angle, may be unscrewed from the inside.

Viewing window made from Macrolon with recess set flush into the metal.

Bus modules of virtually all makes may be attached via the built-in support rails. Upon request also with fitted cable glands, see page 972.

Polycarbonate enclosures PK





Material:
Grey enclosure and cover (version .000) from fibreglass-reinforced polycarbonate, transparent cover (version .100) from polycarbonate,
cover screws from polyamide,
insulating bungs from polyethylene.

Colour:
RAL 7035

Protection category:
IP 66 to EN 60 529/10.91

Supply includes:
Enclosure and cover,
cover screws,
insulating bung for wall mounting screws (not with 9530.000 and 9531.000),
all-round foamed-in PU seal.

Approvals,
see page 22.

Detailed drawing,
see page 1079.

Accessories

Mounting plate

For individual configuration of the enclosure interior, the mounting plate offers a stable, secure and flexible design option.

Design:
Melamine phenol-coated laminated paper, 2.5 mm thick.

Colour:
RAL 7035

Supply includes:
Self-tapping assembly screws.

To fit	Width mm	Height mm	Packs of	Model No. PK
PK 9500.000/PK 9501.000	45	45	12	**9540.000**[1)]

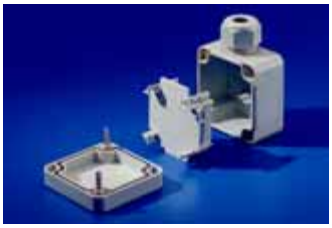
[1)] with spacers



Mounting plate

for polycarbonate enclosures
- PK 9530.000
- PK 9531.000

Via a 3-way depth-adjustable assembly component, the mounting plate may also be used as an inner cover for installed equipment.

Material:
Polycarbonate

For enclosure	Packs of	Model No. PK
9530.000	10	**9551.000**
9531.000	10	**9552.000**

Supply includes:
Assembly parts.

Turn-lock fastener

A quick, convenient screw fastening aid is obtained by clipping into the head of the lid screw.

Material:
Polyamide

Supply includes:
1 pack

	Packs of	Model No. PK
For all enclosures	100	**9582.000**

Hinges

For hinged attachment of lids.
The supplied drilling template ensures problem-free assembly.

Supply includes:
1 set =
2 hinges,
4 assembly screws,
3 polyethylene sealing bungs,
1 drilling template.

For enclosure	Material	Packs of	Model No. PK
PK 9500.000 – PK 9513.000	Polycarbonate	10 sets	**9580.000**
PK 9514.000 – PK 9524.000	Polystyrene	10 sets	**9581.000**

External mounting bracket

To fit enclosure
- PK 9530.000
- PK 9531.000

With moulded lug for cable tie.

Material:
Polyamide

Supply includes:
Assembly parts.

Packs of	Model No. PK
10	**9553.000**

Wall mounting brackets

The enclosure can be screwed to the wall using four wall mounting brackets. The bracket is securely attached to the enclosure by means of pins.

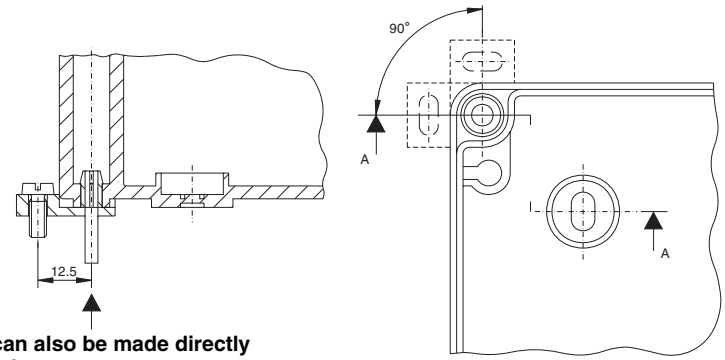
Material:
Polyamide, grey

Supply includes:
1 pack

	Packs of	Model No. PK
For all enclosures	40	**9583.000**

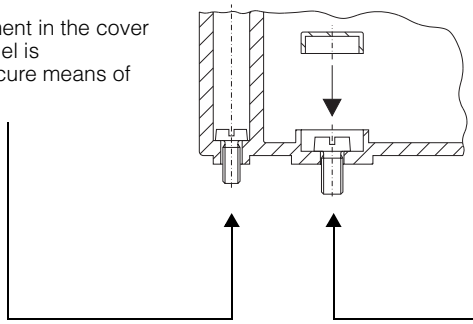
The assembly screw is located in the wall mounting bracket, making it accessible at all times.

The wall mounting bracket may be fitted to the side or top.



Wall attachment can also be made directly without the bracket:

Variant 1
Wall attachment in the cover screw channel is a simple, secure means of attachment.



Variant 2
By knocking out the hole in the enclosure base, mounting in the enclosure interior is also possible.
The screws must be concealed using the sealing bungs supplied with the enclosure. The spacing between the attachment holes is marked on the rear panel of the enclosure.

Support rail

The two support rail sections provide good flexibility for accommodating terminal blocks and installed components.

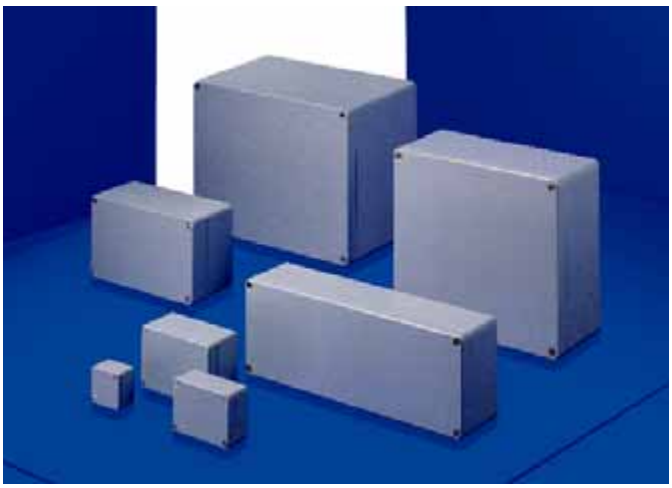
Design:
The support rails are designed in accordance with EN 50 045 (TS 15/5.5) or EN 50 022 (TS 35/7.5); the surface finish is zinc-plated.

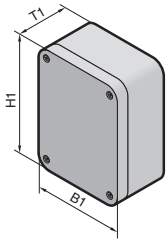
Supply includes:
Two self-tapping assembly screws.

Rail	Maximum number of terminals with the following terminal sizes			Bar length mm	Packs of	Model No. PK
	2.5 mm²	4 mm²	10 mm²			
TS 15/5.5	5	5	4	49.5	12	**9560.000**
	11	11	8	80	12	**9561.000**
	14	14	10	92	12	**9562.000**
	18	18	13	111	12	**9563.000**
TS 35/7.5	12	9	5	81	12	**9564.000**
	17	13	8	106	12	**9565.000**
	24	20	11	144	12	**9566.000**
	38	32	19	216	12	**9567.000**
	61	50	30	336	12	**9568.000**

Calculation of the maximum number of terminals is based on two end holders and a cover.

Cast aluminium enclosures GA





Material:
Enclosure and lid made from cast aluminium, lid with neoprene cord seal.

Surface finish:
Smooth spray finish similar to RAL 7001

Protection category:
IP 67 to EN 60 529/10.91, complies with NEMA 4.

Supply includes:
2 or 4 cover screws, captive mounted
2 or 4 screws for the attachment of support rails, mounting plates etc.
1 screw for connection of the PE conductor.

Rittal service:

Individual standard solutions for enclosures and covers
- Hole drilling
- Thread tapping
- Milling
- Screen printing
- Engraving
- Choice of RAL colours and other surface finishes available on request.

Detailed drawing,
see page 1080.

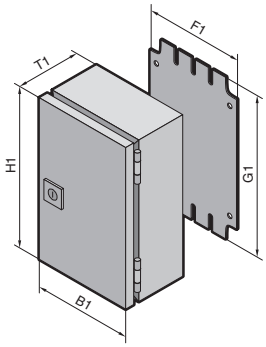
E-Box EB



Material:
Sheet steel
Enclosure: 1.25 mm
1.38 mm for
EB 1555.500, EB 1556.500,
EB 1577.500 to EB 1579.500

Surface finish:
Enclosure and door:
Dipcoat-primed,
powder-coated on the outside in
textured RAL 7035
Mounting plate: Zinc-plated

Protection category:
IP 66 to EN 60 529/10.91

Supply includes:
Enclosure with mounting plate, door including 180° hinges and cam lock with double-bit insert.

Approvals,
see page 23.

Detailed drawing,
see page 1082.

T = Depth

Compact enclosures

Features

The major success of Rittal compact enclosures is based on three key advantages:

1. Rittal mass-produced quality with triple surface treatment (phosphating, electrophoretic dipcoat-priming and powder coating).

2. Materials, sizes and variants are tailored to all major requirement profiles.

3. Superior value for money and virtually unlimited solution diversity thanks to Rittal system accessories.

Simply outstanding – everything fits for years to come: Rittal CM and Rittal CL compact system enclosures – compact-class enclosures which are fully compatible with the TS 8 range of system accessories.

For exceptional requirements:

Stainless steel compact enclosures, see page 273.

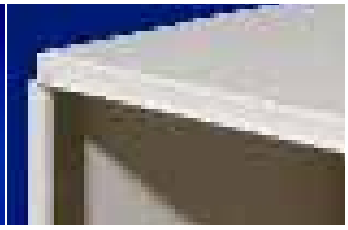
Ex enclosures, see page 286 – 288.

EMC enclosures, see page 289 – 290.

Compact enclosures AE

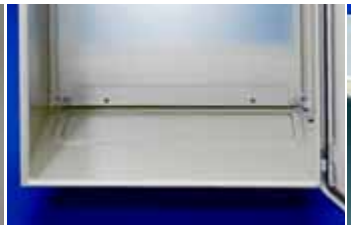
Perforated mounting strips in the door for fast attachment of support strips, cable conduit holders and covers.

Rear panel with holes, prepared for wall mounting bracket or direct wall mounting.



Multi-folded **enclosure protection channel** prevents the ingress of dirt and water when the door is opened.

PE conductor connection facilities on the enclosure, door and mounting plate. See system accessories.



Gland plates made from sheet steel for self-assembly may be exchanged for prepunched plates or plastic plates with membranes.

Triple surface treatment: Phosphating, electrophoretic dipcoat priming, powder coating.

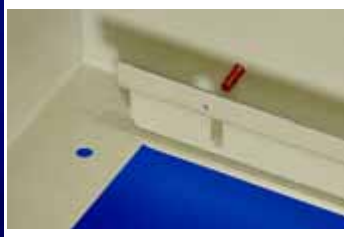
Compact enclosures AE IP 69K

Ideal for **mounting on vehicles:** Lock, hinges and mounting plate are all secured in a vibration-resistant manner.

Resistant to high-pressure cleaning
The silicone seal is protected from direct hosed water by the labyrinth seal of the door and enclosure return edge.

Secure, sealed **wall mounting** from the outside via press-fitted M8 nuts, either directly or using wall mounting brackets 1594.000 and 2433.000, see page 905.

Compact enclosures, Outdoor



Mounting plates
The enclosure is prepared for the installation of an MDF or sheet steel mounting plate. The MDF version is mounted via the mounting brackets.

Roof plate screw-fastened at the correct distance for permanent air circulation. The bonded insulating plate additionally helps to prevent the formation of drips.

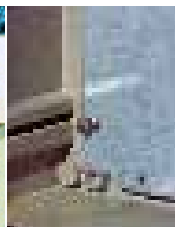
Plastic **handle**, prepared for the installation of semi-cylinders 40 or 45 mm to DIN 18 254.

Compact system enclosures Rittal CM and Rittal CL

Compact Medium Rittal CM
The alternative to large enclosures in the AE series, and a replacement for the AK series. See page 128 – 129.

Compact Large Rittal CL
The economical variant of free-standing enclosures ES 5000. See page 130 – 131.

Plastic enclosures KS



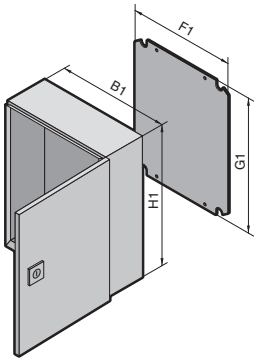
C-sections for infinitely variable mounting plate depth adjustment, and to create several mounting levels.

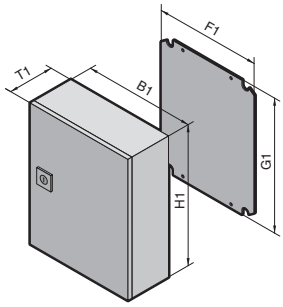
Twin seal on the top and bottom edges of the door in all enclosures, thanks to the integral rain protection strip.

Mounting inserts for threaded inserts in the door and in the rear panel of the enclosure, for simple installation.

Compact enclosures AE

Width: 200 – 600, height: 300 – 400





Material:
Sheet steel

Surface finish:
Enclosure and door:
Dipcoat-primed,
powder-coated on the outside in textured RAL 7035
Mounting plate: Zinc-plated

Protection category:
IP 66 to EN 60 529/10.91,
Complies with NEMA 12
(AE 1032.500, AE 1035.500),
Complies with NEMA 4
(AE 1030.500, AE 1031.500, AE 1380.500, AE 1039.500, AE 1339.500).

Supply includes:
Enclosure of all-round solid construction, single door,
1 gland plate in the enclosure base,
r/h door hinge, may be swapped to opposite side (except with AE 1032.500 and AE 1035.600),
with one cam lock,
foamed-in door seal, mounting plate.

Approvals,
see page 26.

Detailed drawing,
see page 1083.

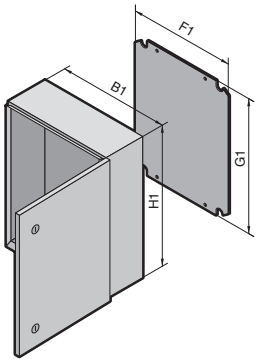
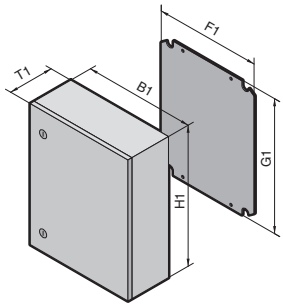
Protection category IP 69K





Perfect protection in a tough environment
The compact enclosure AE in IP 69K is the ideal solution when a high protection category and corrosion resistance are needed.

- Resistant to high-pressure cleaning (protection category IP 69K). The interior seal is protected against direct hosed water.
- Ideal for mounting on vehicles: Lock, hinges and mounting plate are all vibration resistant.
- The enclosure and door have an aluminium zinc coating for a high level of corrosion protection.
- Foamed-in silicone seal, water-impermeable, with high resistance to temperature and chemicals.
- Prepared to accommodate the door stay 1101.800 and the interior door.
- Wall mounting

Material:
Sheet steel

Surface finish:
Enclosure and door:
Aluminium zinc coating, powder-coated in textured RAL 7035
Mounting plate: Zinc-plated

Protection category:
IP 69K to DIN 40 050-9/5.93

Supply includes:
Enclosure of all-round solid construction, single door,
door hinge may be swapped to opposite side by rotating the enclosure,
cam lock with double-bit insert, other inserts available on request.

Rittal service:
Other sizes available on request. Cutouts and drilled holes to your specifications.

Detailed drawing,
see page 1086.

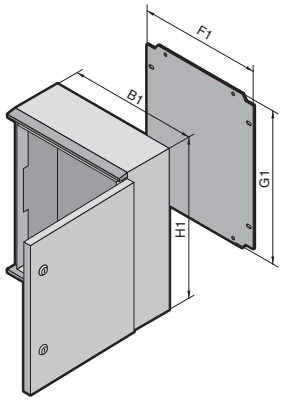
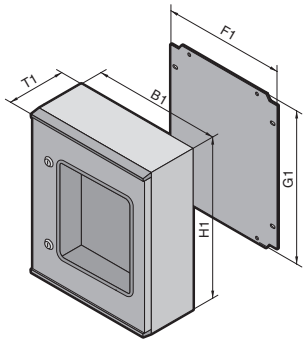
Cable gland
made from polyamide/brass, and multi-seal inserts,
Model No. see page 972/973.

Signal pillar LED compact,
Model No. see page 1041.

Accessories Page 832 **Console systems** Page 261

Width: 200 – 600, height: 300 – 600





Material:
Enclosure and door:
Fibreglass-reinforced unsaturated polyester
Mounting plate:
Sheet steel
For KS with viewing window:
Impact resistant glazed acrylic, 3.0 mm with all-round rubber cable clamp strip

Surface finish:
Enclosure and door:
No after-treatment,
dyed plastic,
similar to RAL 7032
Mounting plate: Zinc-plated

Protection category:
KS without viewing window:
IP 66 to EN 60 529/10.91, complies with NEMA 4x.
KS with viewing window:
IP 56 to EN 60 529/10.91, complies with NEMA 12.

Supply includes:
Enclosure of solid all-round construction,
r/h door hinge,
door hinge may be swapped to opposite site by rotating the enclosure,
mounting plate,
all-round foamed-in PU seal in the door,
twin seal on the top and bottom edges of the door (integral rain protection strip), press-fitted
C sections at the sides for infinitely variable mounting plate depth adjustment.

Note:
Under the influence of long-term UV radiation (sunlight) in conjunction with wind and rain, the surface finish may become visually impaired.
In other words, the fibreglass portions become visible on unprotected surfaces. This does not impair the protection of the installed electrical components in any way. All other surface finishes are likewise impaired by ultraviolet radiation.
If the enclosures cannot be protected from radiation, e.g. via a sun canopy, we recommend that they should be painted with a PUR paint. Older enclosures where the surface finish already reveals visible fibreglass portions can likewise be treated in this way after thorough cleaning.
Of course, all enclosures can also be supplied spray-finished in RAL colours. For outdoor siting, we recommend pale shades.

Approvals,
see page 27.

Detailed drawing,
see page 1087.

Compact system enclosures

Features

Rittal CM and Rittal CL – the new compact class for the configuration of compact enclosures with a diverse range of opportunities for interior installation and cable entry.

Rittal Compact Medium, the alternative to large enclosures in the AE series and the replacement for the AK series. **Rittal Compact Large,** the economic variant of free-standing enclosures ES 5000.

Compatibility with TS 8 mounting components and Rittal system accessories make these enclosures the “unbeatable heroes” of your applications.

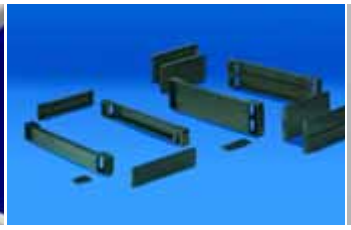
Key features of Rittal CM and Rittal CL

Solid sides with studs on the inside for the installation of adaptor rails for interior configuration with TS 8 accessories.

Automatic potential equalisation via earthing inserts on the attachments of the gland plates.

Earthing bolts with paint-free, corrosion-proof contact discs, on the hinge side of the enclosure at the bottom.

More space, greater stability, and more opportunities for cable entry, thanks to a large opening and a wide range of gland plate combinations,
see page 132.



Fewer parts, more opportunities, plus lower purchasing, storage and assembly costs – the formula for the new modular base/plinth system TS 8 – now also for Rittal CM and Rittal CL.

Enclosure slotted for interchangeable door hinge.

Roof with holes and bungs, prepared for the mounting of eyebolts.

The triple surface finish:
1. Phosphating,
2. Electrophoretic dipcoat priming,
3. Powder coating.

Corrosion protection and resistance to lubricants, machining products and cleaning agents.

Features

Compact Medium Rittal CM

Lock insert is protected from contamination by the inserted trim panel. There is space for your company logo behind the top plexiglass cover.

Enclosure top and bottom, with stud at front for installation of an adaptor rail for fast assembly of system light, door operated switch, door stay or covers.

Doors right and left with spot welded perforated mounting strips (25 mm pitch pattern) for universal interior installation.

Fast attachment: The mounting plate (folded over at the side) is inserted at the bottom, and secured at the top with clips.

Perfect seal, thanks to the twin edge of the enclosure and optimum compression of the foamed-in seal.

Fold rather than turn – this handle facilitates optimum use of the door space for internal and external mounting.

Compact Large Rittal CL

Mounting plate (identical to the TS 8) – with grid pattern print on the right and left for easy positioning of mounted equipment – depth-variable.

Enclosure perforated on a 25 mm pitch pattern at the front top for the installation of a system light, door operated switch, door stay etc.

Adjacent door with additional centre protection with a bar at the top, with interconnecting rods and handle at the bottom.

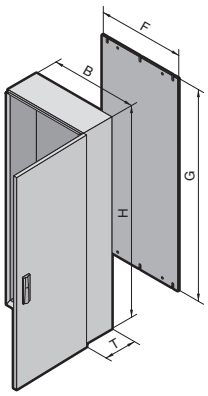
Doors (identical to TS 8) with square frame, perforations on a 25 mm pitch pattern.

The rods of the lock are locked from top to bottom. This is safe for transportation, and vibration-proof.

The welded rear panel facilitates direct screw fastening to a machine or wall.

Compact system enclosures Rittal CM

Width: 600 – 800, height: 800 – 1200



Material:
Sheet steel
Enclosure: 1.5 mm
Door: 2.0 mm
Mounting plate: 3.0 mm

Surface finish:
Enclosure and door:
Dipcoat-primed,
powder-coated on the outside in textured RAL 7035
Mounting plate: Zinc-plated

Protection category:
IP 55 with selection of the appropriate gland plates,
see page 132.

Supply includes:
Enclosure with one door, r/h door hinge, may be swapped to opposite side, mounting plate, open base for individual cable entry,
see page 132.

Available from October 2005.

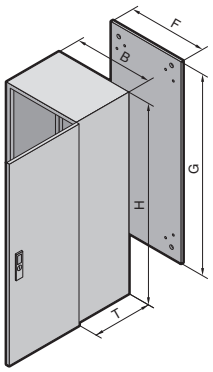
Compact system enclosures Rittal CL

Width: 600 – 1000, height: 1600 – 2000



Material:
Sheet steel
Enclosure: 1.5 mm
Door: 2.0 mm
Mounting plate: 3.0 mm

Surface finish:
Enclosure and door:
Dipcoat-primed, powder-coated in textured RAL 7035 on the outside
Mounting plate: Zinc-plated

Protection category:
IP 55 with selection of the appropriate gland plates,
see page 132.

Supply includes:
Enclosure with one door, r/h door hinge, may be swapped to opposite side,
mounting plate, open base for individual cable entry,
see page 132.

Available from the 2nd quarter 2006 on.

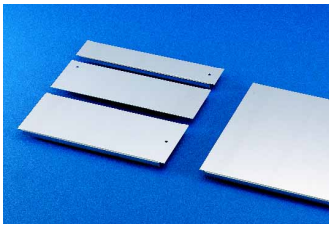
Cable duct, horizontal,
sized to the width of the mounting plate or in a fixed length of 2000 mm,
Model No. see page 978.

EMC gland plates,
suitable for integration into the modular gland plate concept,
see page 958.

Accessories Page 832

Accessories



Gland plates

Select suitable gland plates depending on the application. The following examples illustrate how individually cable entry may be organised. Potential equalisation is provided via assembly components and earthing points.

Design	For enclosure width mm			
	600	800	1000	1200
	Model No.			
1	5001.210	5001.211	5001.212	5001.213
2	5001.214	5001.215	5001.216	5001.217
3	5001.218	5001.219	5001.220	5001.221
4	5001.222	5001.223	5001.224	5001.225
6	5001.226[1)]	5001.227[1)]	5001.228[1)]	5001.229[1)]

[1)] Cable entry grommets, see Cat. 31, page 964 - 965
Packs of 1

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Note:
For greater stability and universal cable entry, the base opening is divided in the width for 1000 and 1200 mm wide enclosures, and can be populated differently.

Order example:
CM 5120.500 (W/H/D 1000 x 1200 x 400 mm)
– On left, gland plates divided into two with cable clamp strip
– On right, one-piece gland plate

Combination options:

	Depth 300 mm	Depth 400 mm
One-piece/ Cable glands		Divided/cable glands		Divided/ Cable clamp strip, centre		Divided/ Cable clamp strip, rear		Divided/ Cable clamp strip on centre and rear		Divided/ 1 grommet		Divided/ 2 grommets		EMC		

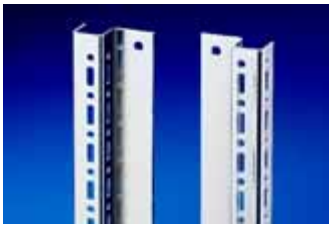
You will need:

- 5 2 sections for cable entry, centre, TS 8802.100, see Cat. 31, page 965 (Packs of 4)
- 1 1 gland plate, depth 50 mm, 5001.212
- 3 1 gland plate, depth 150 mm, 5001.220
- 4 1 gland plate, depth 250 mm, 5001.224

- 1 Gland plate, depth 50 mm
- 2 Gland plate, depth 100 mm
- 3 Gland plate, depth 150 mm
- 4 Gland plate, depth 250 mm
- 5 Section for cable entry, centre, see Catalogue 31, page 965.
- 6 Cable entry plates, 100 mm deep, see above, Grommets, see Catalogue 31, page 965.
- 7 EMC gland plate, see Catalogue 31, page 958.
- 8 Cable glands, see page 13.
- 9 Section for cable entry, rear, see page 9.



Rails for interior installation

For mounting in:
- Rittal CM
- Rittal CL

on the threaded bolts provided in the enclosure.

With TS system punchings for mounting:
- TS punched section with mounting flange, 17 x 73 mm
  – in the depth for outer mounting level,
  – in the width for inner mounting level
- TS punched rail 18 x 38 mm
- TS mounting bars for outer mounting level
- PS punched rail 23 x 23 mm, in conjunction with TS mounting bracket
- PS punched section without mounting flange, 23 x 73 mm, in conjunction with support bracket TS

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure height mm	Packs of	Model No. SZ
600	4	**5001.050**
800	4	**5001.051**
1000	4	**5001.052**
1200	4	**5001.053**
1400	4	**5001.054**
1600	4	**5001.055**
1800	4	**5001.056**
2000	4	**5001.057**

Available from the 2nd quarter 2006 on.

Accessories:

TS punched section with mounting flange, 17 x 73 mm, see page 921.
TS punched rail 18 x 38 mm, see page 923.
TS support strips, see page 924.
PS punched rail 23 x 23 mm, see page 925.
PS punched section without mounting flange, 23 x 73 mm, see page 925.
TS mounting bracket, see page 932.
TS support bracket, see page 933.

Folding lever handle

Because the handle does not take up any swing space, due to its folding mechanism, the door surface area may be maximised to install equipment.

Prepared for the installation of:
- Semi-cylinders with an overall length of 40 or 45 mm (to DIN 18 254)
- All lock inserts
- As well as SZ lock and push-button inserts

Available from the 2nd quarter 2006 on.

Version	Model No. CM
Dark grey with light handle	**5001.060**

Accessories:

Lock inserts, see page 881.
SZ lock and push-button inserts, see page 882.

With security lock insert E1.
Only for applications in the VW, Audi, SEAT, Skoda Auto sector.
Supplied without key.
Other locks available on request.

Version	Model No. CM
Dark grey with light handle	**5001.061**

Enclosure systems

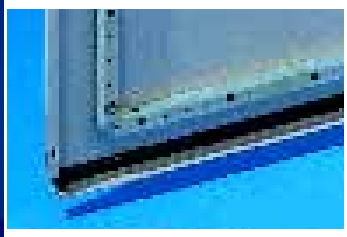
Features

ES, the free-standing enclosure with firmly linked side panels.

TS 8, the Top enclosure system, a system platform for individual tasks.

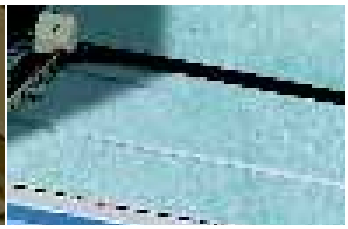
Every enclosure, with all-round accessibility, is a specialist – however particular the task in hand.

ES free-standing enclosures



Door frame with slots on a 25 mm pitch pattern for the mounting of ducts, utility lectern, cable harnesses, wiring plan pockets etc.

Enclosure, **with system slots** on a 25 mm pitch pattern all round, for interior installation with PS accessories.



Three-piece, interchangeable, movable **gland plates** for easier cable entry and machining.

Compact system enclosures

New:
Compact Large Rittal CL,
the cost-effective alternative.

Monobloc construction.

Doors, mounting plates and interior installation compatible with TS 8.

See page 130 – 131.

Baying systems TS 8

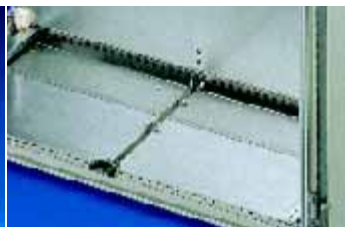
The system platform for

- Electronic enclosures, see page 148.
- Modular front design, see page 149.
- Isolator door locking, see page 150.
- Corner enclosures, see page 868.
- Climate controlled enclosures, see page 582 – 583.
- Ex pressurisation, see page 152.
- Higher protection categories, see page 151.
- Stainless steel enclosure systems, see page 284.
- EMC enclosures, see page 291.

Baying systems TS 8

Door frame with punchings on a 25 mm pitch pattern, for the attachment of ducts, utility lecterns, cable harnesses, wiring plan pockets etc.

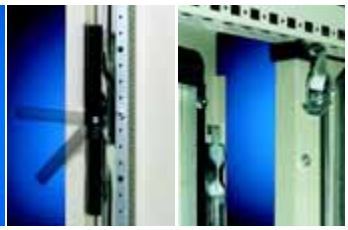
Mounting plate, zinc-plated, with C-fold at the side, **depth-variable** on a 25 mm pitch pattern. After installation, the slide rails may be used as mounting rails for the interior installation.



Maximum space for cable entry, thanks to multi-divided gland plates and accessory modules. With a square base area, cable entry may be installed rotated through 90°.

Universal interior installation: Frame sections, slotted on a 25 mm pitch pattern, with two mounting levels vertically with a TS hole pattern, and horizontally with a PS pitch pattern.

The roof plate is secured with **removable eyebolts.** The **all-round rain channel** prevents dirt and moisture from lying in contact with the seal.



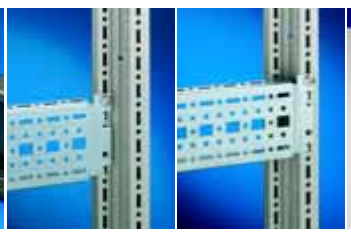
Adjacent door locked into position by bars top and bottom with interconnecting rods and handle.

It couldn't be any faster: With the gland plates, side panels, rear panel and cover, **potential equalisation occurs automatically via earthing points** during assembly.

Between bayed enclosures, the **cover** affords additional protection for the seal.
Cover see page 867.

Fastening of the rods on all lock pieces is **from top to bottom.** This means that the lock cannot be opened during transportation or as a result of vibrations.

Base/plinth components (front and rear) combined with **trim panels** (side) or used to link two base/plinths.

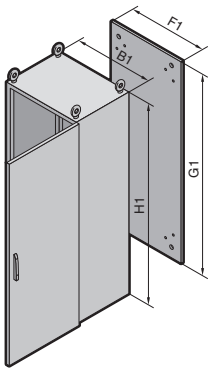


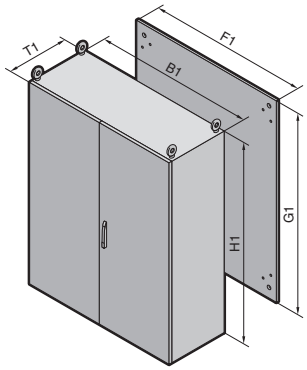
Two symmetrical levels for **maximum space utilisation** in the width and depth.

Potential equalisation is not necessary on the lock, because the lockable door latches onto the adjacent door outside of the sealing zone.

Free-standing enclosure ES 5000

Width: 600 – 1000





Material:
Sheet steel
Enclosure: 1.8 mm
Door: 2.0 mm
Rear panel and gland plates: 1.5 mm
Mounting plate: 3.0 mm

Surface finish:
Enclosure, door and rear panel: Dipcoat-primed, powder-coated in textured RAL 7035 on the outside
Mounting plate and gland plates: Zinc-plated

Protection category:
IP 56 to EN 60 529/10.91,
IP 55 to EN 60 529/10.91 for ES 5080.500,
Complies with NEMA 12.

Supply includes:
Enclosure with door(s), r/h door hinge, can be changed to opposite side (except 5080.500), mounting plate, gland plates and rear panel, detachable, 2 eyebolts, not fitted (ES 5080.500, ES 5084.500: 4 eyebolts, fitted).

Approvals,
see page 28.

Detailed drawing/ nominal dimensions,
see page 1089 – 1090.

Possible alternative:
Compact system enclosure Rittal CL, see page 130 – 131.

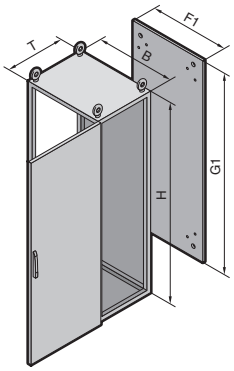
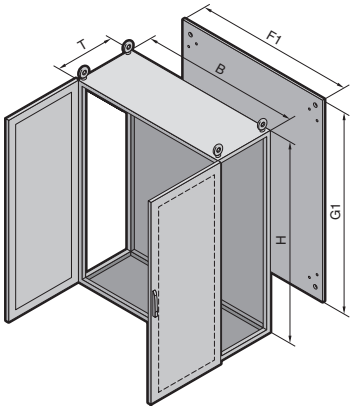
Height: 2000, depth: 600





Material:
Sheet steel
Enclosure frame, roof, rear panel and gland plates: 1.5 mm
Door: 2.0 mm
Mounting plate: 3.0 mm

Surface finish:
Enclosure frame:
Dipcoat-primed
Door, roof and rear panel:
Dipcoat-primed, powder-coated in textured RAL 7035 on the outside
Mounting plate and gland plates: Zinc-plated

Supply includes:
Enclosure frame with doors, mounting plate, gland plates, rear panel, roof plate and 2 support strips (TS 4696.000, see page 924), fitted in the enclosure depth.

Protection category:
IP 55 to EN 60 529,
Complies with NEMA 12 (apart from TS 8406.510).

Accessories:

Corner enclosures,
see page 868.
Climate controlled enclosure KTS single-door/two-door,
see page 582 – 583.

Approvals,
see page 29.

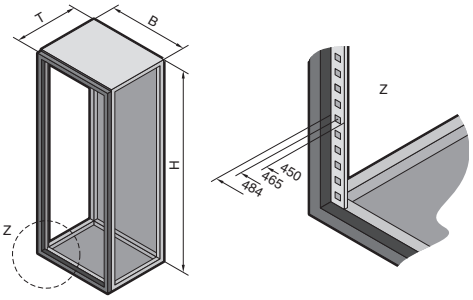
Electronic enclosure



Material:
Enclosure frame:
1.5 mm sheet steel
Front frame:
Extruded aluminium sections with die-cast corner pieces
Rear door: Sheet steel 2 mm
Roof and gland plates:
1.5 mm sheet steel
Adaptor sections: Aluminium

Surface finish:
Enclosure frame:
Dipcoat-primed
Front frame, rear door and roof:
Powder-coated in RAL 7035
Adaptor sections:
Conductive, corrosion-resistant coating
Gland plates: Zinc-plated

Supply includes:
Enclosure frame, front frame (r/h hinge, opening angle 130°, held via mechanical snap fasteners on left), rear door (r/h hinge, may be swapped to opposite side), roof, adaptor sections and gland plates.

Approvals,
see page 30.

Detailed drawing/nominal dimensions,
see page 1094.

Baying systems TS 8

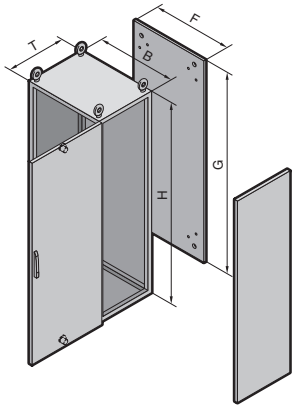
prepared for EX pressurisation



In conjunction with an EX overpressure control, e.g. from Stahl (not included with the supply), conventional operating equipment may be used in explosion hazard areas. To this end, a permanent overpressure is applied to the enclosure which prevents the ingress of potentially explosive atmospheres. Economical operation is guaranteed, thanks to a minimal leakage rate of less than 20 l/min, at 2 mbar test pressure.

Design:
- Base as for roof
- Door with additional cams top and bottom, r/h hinge (l/h hinge on request)
- Side panels fitted

Surface finish:
Sheet steel:
Enclosure frame:
Dipcoat-primed door, roof, base, side panels and rear panel:
Dipcoat-primed, powder-coated on the outside
Textured RAL 7035
Mounting plate: Zinc-plated

Stainless steel:
Enclosure frame: Bare
Door, side panels, roof, base/plinth, and rear panel:
Brushed, grain 240
Mounting plate: Zinc-plated

Protection category:
IP 65 to EN 60 529/10.91

Supply includes:
Enclosure frame with door (with additional cam top and bottom), roof/base plate, rear panel, side panels, mounting plate.

Note:
According to ATEX an EExp empty enclosure cannot be certified.

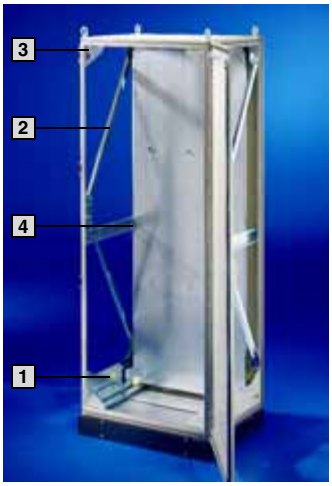
For areas at risk from earthquakes



TS 8 for earthquake zone 1, 2 and 3 to Bellcore
TS 8806.500:
W x H x D 800 x 2000 x 600 mm

With base/plinth (base/plinth components front and rear and base/plinth trim, side, see page 835), 100 mm high, with weight load of 125 kg distributed evenly over the mounting plate.

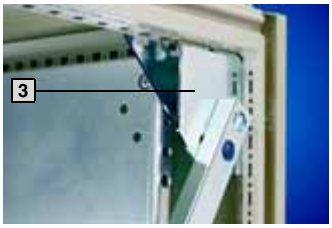
Note:
These versions have been tested and meet the requirements to Telcordia GR 63-CORE. They should be seen as a comparative variable to the customer's own plant, since the certification of empty enclosures is not possible.

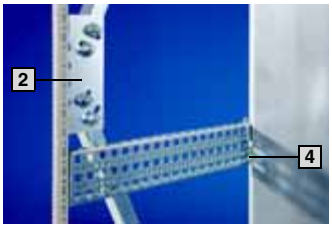
TS 8 for earthquake zone 4 to Bellcore
TS 8806.500:
W x H x D 800 x 2000 x 600 mm

Fitted with:
- Earthquake kit and
- Base/plinth, complete see page 153,

with weight load of 450 kg distributed evenly over the mounting plate.

Rittal service:
- Mounting on the enclosure available on request.





Earthquake kit

for TS 8806.500

Material:

Command Panel VIP 6000

Diversity: Frame and front design

The VIP 6000 offers exceptionally diverse opportunities.

Each of the three frames conveys its own design line with special functions.

Each enclosure is manufactured to order and covers every conceivable requirement. Every operator panel is assembled quickly and precisely.

Should you have any queries, please contact your specialist Rittal advisor.

As we have said, there's always a solution!

Approvals,
see page 31.

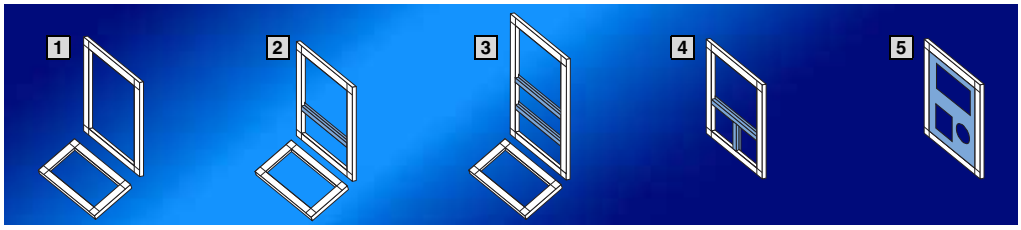
Three customised design lines

Wide frame
A frame and handle in one; the ideal choice where enclosures with fins all round are used for better heat dissipation.

Narrow frame
An eye-catching design with its stylish lines, particularly for small enclosures.

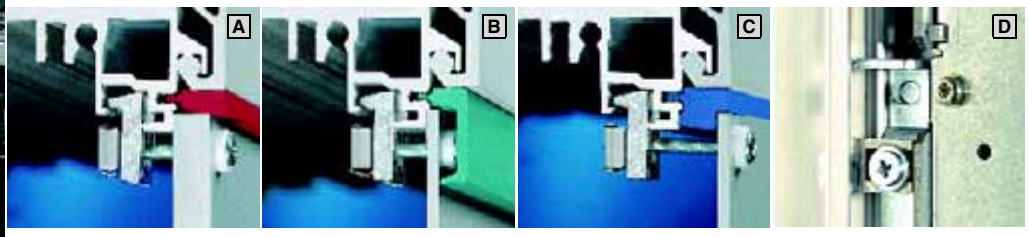
Combined handle
The soft-coated frame at the sides is particularly sympathetic to the touch. This is also suitable for use with enclosures with fins at the sides.

Individual front design



1 Without subdivision
2 With cross member or sealing bar
3 With two cross members or sealing bars, including combinations
4 Combined with horizontal/vertical cross member or sealing bar
5 Adaptor plate with individual cutouts

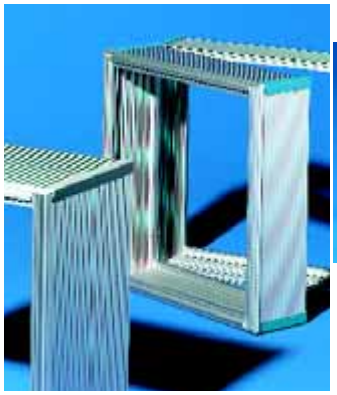
Attachment/trim



Each attachment point all round is achieved with sliding retaining claws.

The screw heads disappear stylishly beneath the cover trim (A).
Front panels with threaded bolts may also be combined with the end trim (B) or spacer trim (C).
Panels with screw clamp (D) are mounted with the end trim.

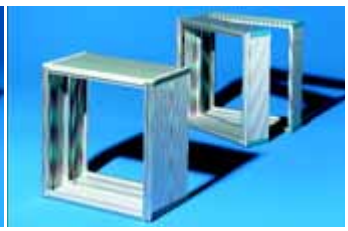
Diversity: Enclosures, rear panels, heat dissipation



Tailor-made operating housings

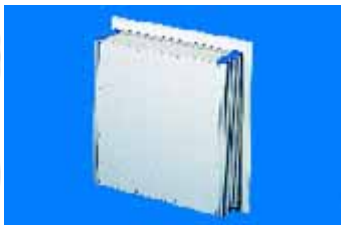
There is a choice of five installation depths (155, 185, 295, 328 and 438 mm) available. Either screw-fastened or hinged, depending on requirements.

They provide space e.g. for: industrial PCs, machine control panels, flat screens and monitors, keyboard drawers, drives, bus modules and every other conceivable application.



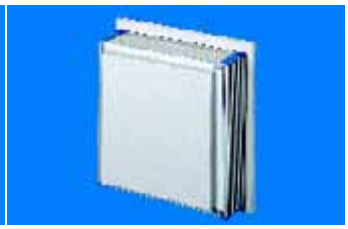
Versatile configuration is individual and easy, thanks to the internal screw channels.

Rear panels to order

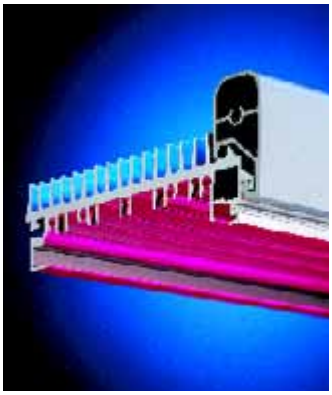


Screw-fastened/vertically or horizontally hinged –

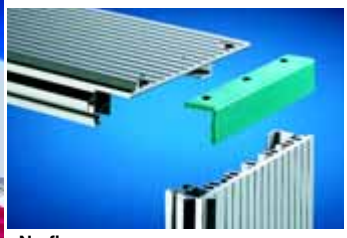
choose the rear panel according to your servicing requirements.



A depth extension of 45 or 245 mm can also be achieved using special rear panels.

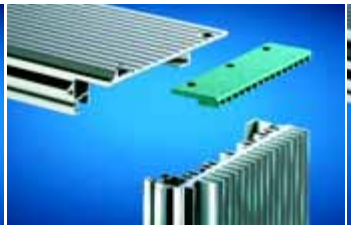


Effective heat dissipation



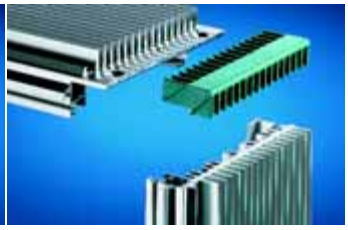
No fins

Because it is equipped with cooling fins, the VIP 6000 solution often eliminates the need for active cooling components. Even the VIP 6000 enclosure version without fins boasts excellent heat loss dissipation.



Fins at sides

For an installation depth of 155 mm, with all-round cooling fins the dissipatable heat loss is increased by approximately 30%. With air circulation inside the enclosure, the dissipatable heat loss is increased by up to



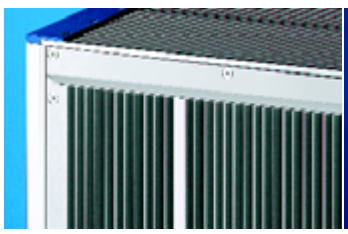
Fins all round

a further 15%. A further significant increase in heat dissipation can be achieved with the modular cooling rear panel.

Dissipatable heat loss[1)]				
Installation depth 155 mm	19″/ 7 U	Rear cooling panel, modular	19″/ 7 + 3.5 U	Rear cooling panel, modular
No fins	80 W	88 W	100 W	110 W
Fins at sides	95 W	105 W	115 W	127 W
Fins all round	110 W	121 W	130 W	148 W

[1)] P_v (W) at ΔT = 20 K

Enclosures with installation depth 185 mm and 328 mm are directly behind the front frame at a depth of 44 mm, without fins.



Cooling fins on the rear cooling panel considerably increase the dissipatable heat loss.

VIP SK small cooling unit
This cooling unit provides added peace of mind when cooling fins are not enough.

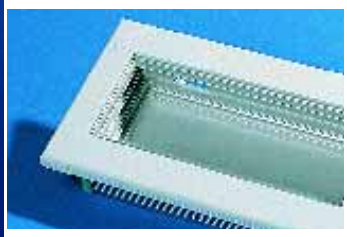
Command Panel VIP 6000

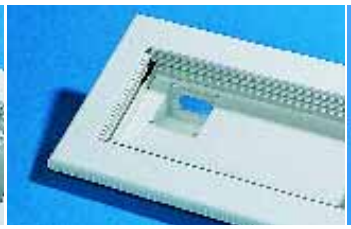
Diversity: Keyboard housing and ergonomics

Further diversity from the modular system:

Keyboard housing in three different depths.

The matching keyboard housing





For all three frame types, keyboard housings are available in the installation depths 105 and 44 mm. For the wide frame, a depth of 27 mm is additionally available in two variants. The width of the keyboard and operating housing is identical with the wide VIP 6000 frame. With narrow and combined VIP 6000 frames, different widths of keyboard and operating housings may also be used.

Keyboard housing connectors for wide frames and . . .

Wide frame

Combined frame

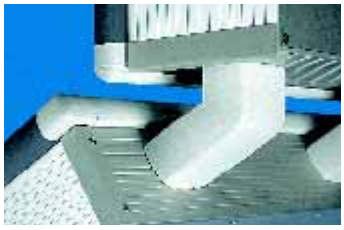
Narrow frame

Depending on the chosen VIP 6000 frame, rigid and adjustable connections between the operating housing and the keyboard housing are available.

Frame connector and cable tube, rigid
Tilting angle 120°.

Frame connector, adjustable and cable tube, flexible
Tilting angle adjustable from 75° – 120° in 7.5° increments.

. . . for narrow and combined frames



Enclosure duct connector
Tilting angle 120°, rigid, with integral cable tube, for enclosure installation depth 105 mm.

Enclosure bar connector
Tilting angle 120°, rigid, for enclosure installation depth 44 mm.

Hinged frame connector
Tilting angle 75° – 120° infinitely adjustable.

Diversity: Keyboard housing and ergonomics

Precisely the right position

Different viewing angles of the machine, whether the operating staff are tall or short, sitting or standing – with Rittal support arm systems, the command panel is always in the optimum position. Depending on the system configuration, jib length and enclosure weight, support arm systems CP-L or CP-XL are used. If you want to combine a high load capacity with a stylish look, system combinations provide the ideal solution.

Always within reach

Tailored precisely to the operator's requirements, various handle sets may be fitted in accordance with ergonomic requirements. "Steering" the enclosure becomes child's play.

Stationary or mobile

Floor-standing systems in a variety of designs – even height-adjustable – round off the application diversity of the VIP 6000 Command Panel.

Diversity: Configuration examples

Nothing's impossible . . .

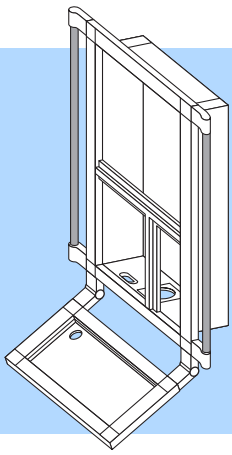
A kaleidoscope of incredible solution diversity. Configure your perfect enclosure.

Allow yourself to be inspired by these examples: e.g. by the front divisions, the handle arrangements, the enclosure depths, and much more besides.

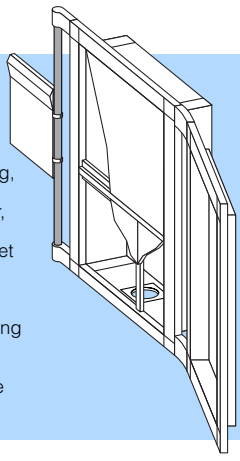
. . . with wide frame.

A small selection from the wide range of opportunities available.
For enclosures with cooling fins, the wide frame is important.

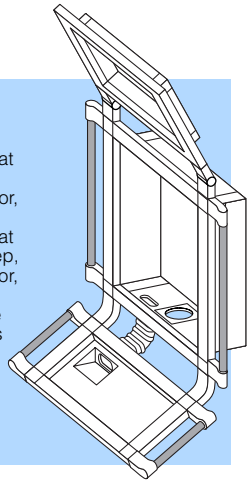
Example A
- Operating housing, 155 mm deep
- Keyboard housing, 27 mm deep, with cable entry grommet
- Frame connector, adjustable
- Vertical handle set
- With vertical and horizontal cross member
- Support arm connection at bottom



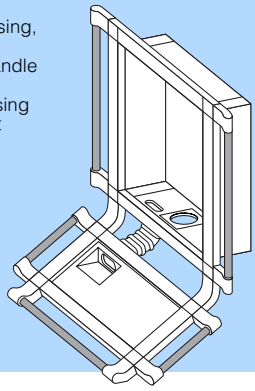
Example B
- Operating housing, 155 mm deep
- Side keyboard housing, 44 mm deep
- Frame connector, rigid
- Vertical handle set with clipboard
- With horizontal cross member and vertical sealing bar
- Support arm connection at the bottom



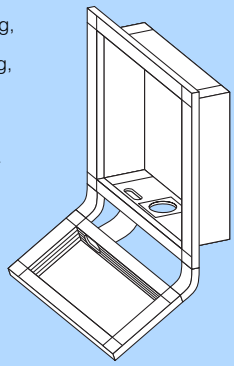
Example C
- Command panel, 155 mm deep
- Keyboard housing at top, 44 mm deep, with frame connector, adjustable
- Keyboard housing at bottom, 44 mm deep, with frame connector, rigid
- Cable tube, flexible
- Vertical handle sets
- Support arm connection bottom



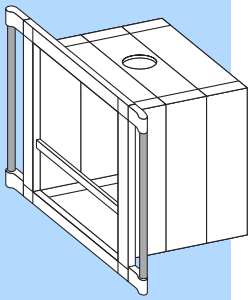
Example D
- Operating housing, 155 mm deep, with vertical handle set
- Keyboard housing with handle set horizontal and vertical
- Cable tube, flexible
- Support arm connection at bottom



Example E
- Operating housing, 155 mm deep
- Keyboard housing, 105 mm deep
- Frame connector and cable tube, rigid
- Support arm connection at bottom



Example F
- Operating housing, 438 mm deep, e.g. for colour screen
- With handle set vertical
- With horizontal sealing bar
- Support arm connection top

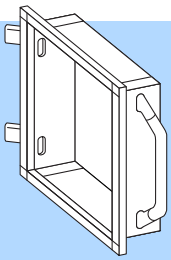


Diversity: Configuration examples

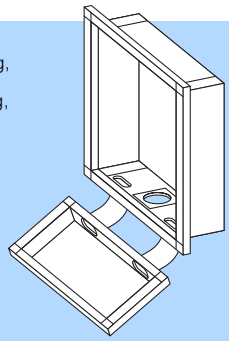
. . . with narrow frame.

Stylish lines for small enclosures and those without fins.

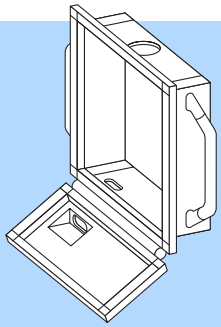
Example G
- Operating housing, 155 mm deep
- With U handle, vertical
- Enclosure connector, adjustable, on l/h side for vertically hinged wall mounting



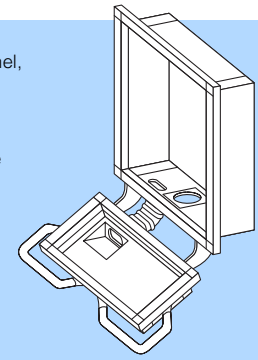
Example H
- Operating housing, 155 mm deep
- Keyboard housing, 105 mm deep
- Enclosure duct connector
- Support arm connection at the bottom



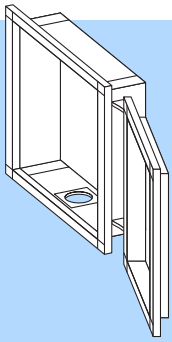
Example I
- Operating housing, 155 mm deep
- Keyboard housing, 44 mm deep
- Hinged frame connector
- U handles, vertical
- Cable tube, flexible
- Support arm connection, top



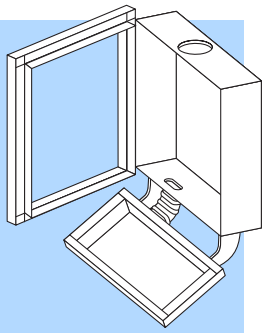
Example J
- Command panel, 155 mm deep
- Keyboard housing, 44 mm deep
- With enclosure bar connector
- With corner handles
- Cable tube, flexible
- Support arm connection at bottom



Example K
- Operating housing, 155 mm deep
- Keyboard housing, 44 mm deep
- Enclosure bar connector
- Support arm connection at bottom



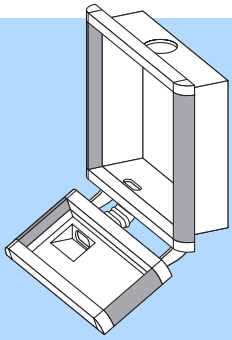
Example L
- Operating housing, 185 mm deep, hinged
- Keyboard housing, 44 mm deep
- Enclosure bar connector
- Cable tube, flexible
- Support arm connection top



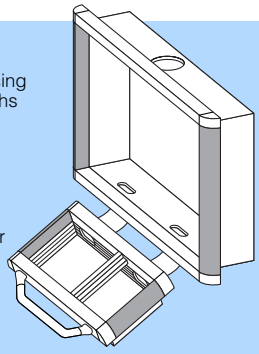
. . . with combined frame.

The soft-coated frame at the sides is particularly sympathetic to the touch.

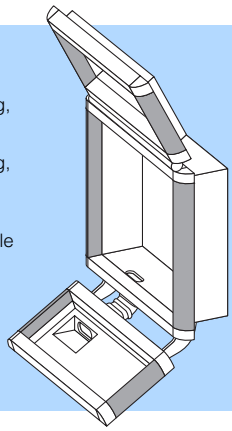
Example M
- Operating housing, 155 mm deep
- Keyboard housing, 44 mm deep
- Enclosure bar connector
- Cable tube, flexible
- Support arm connection top



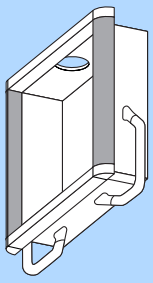
Example N
- Operating and keyboard housing in various widths
- Keyboard housing, 105 mm deep, with cross member
- Enclosure duct connector
- U handle horizontal
- Support arm connection top



Example O
- Command panel, 155 mm deep
- Keyboard housing, top, with hinged frame connector
- Keyboard housing, bottom, with enclosure bar connector
- Cable tube, flexible
- Support arm connection, top



Example P
- Operating housing, 155 mm deep
- Corner handles
- Support arm connection, top



Selection: Operating housing/keyboard housing

We need the following information in order to deal with your enquiry/order:
- Model No. front frame: CP 6392.X09
- The dimensions and number of panels/front panels to be installed in the operating/keyboard housing
- Design code number for the operating/keyboard housing

Protection category:
IP 65 (if the opening in the enclosure is covered or sealed in accordance with the protection category).

Order form, available on the Internet.

1. Front frame

Select the frame to match your requirements. It is used automatically for a keyboard housing as well.

Model No. CP Command panel

6	3	9	2	.		0	9

Model No. CP Keyboard housing

6	3	5	1	.		0	9

.009

Wide frame 0
Extruded aluminium section

Die-cast zinc corner pieces

Colour: RAL 7035[1]
finely textured

.109

Combined frame[2] 1
Extruded aluminium section

Soft-coated frame similar to RAL 7024 (sides), vertical

Die-cast zinc corner pieces

Note:
For visual reasons only enclosures without fins or with fins on the side should be mounted here.

.209

Narrow frame[2] 2
Extruded aluminium section

Die-cast zinc corner pieces

Note:
For visual reasons only enclosures without fins should be mounted here.

[1] Other RAL colours available on request.
[2] For keyboard housing depth 27 mm not possible (see selection 4.1).

2. Panel dimensions

2.1 For operating housings CP 6392.X09 and
2.2 For keyboard housings CP 6351.X09
On the order form, please state the width (B) x height (H) x depth (T) of the control components and the manufacturer/model, with due regard for the installation criteria (see below).

Checking the installation criteria

Please check whether your operator panel is installed directly into the VIP 6000. Otherwise, an adaptor panel is needed – cf. 3.2, design code number **6**, page 162.
The dimensions of the operating panel and keyboard housing are derived from the dimensions of your panel and the number of cross members.

1 **7 to 13 mm edge spacing** of the mounting hole or bolt.

2 **Front panel projection** on sides with mounting holes or bolts **at least 17 mm,** on sides without mounting holes at least 6 mm.

3 **Front panel thickness** depending on the type of trim section variable, see page 163, version 3.4.

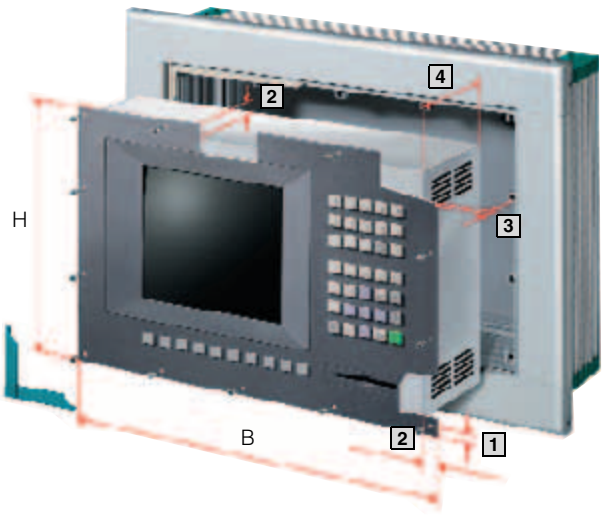
4 **Installation depths:**
Operating housing = 155 mm, 185 mm[1], 295 mm[1], 328 mm[1], 438 mm[1].
Command panel **with 45 mm deep rear panel**[2] = 200 mm, 230 mm[1], 340 mm[1], 373 mm[1], 483 mm[1].
Command panel **with 245 mm deep rear panel**[2] = 400 mm, 430 mm[1], 540 mm[1], 573 mm[1], 683 mm[1].

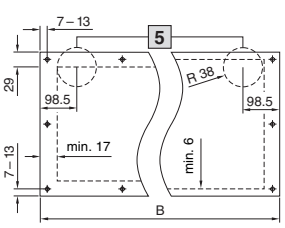
5 For versions with a hinged rear panel, the maximum installation depth is reduced by 27 mm in the vicinity of the lock.

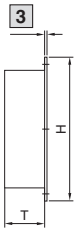
[1] Enclosure without fins with a 60 mm deeper rear section available on request.

[2] Other depths available on request.

Note:
Load information for installed equipment, see page 1186.







3.1 Installation depth

Material:
Enclosure:
Extruded aluminium section
Corner protectors:
Plastic, self-extinguishing

Surface finish:
Enclosure: Natural anodised

Note:
Support arm connection see 3.6.
Drawing view from above.
R/h hinge is also possible.

Detailed drawing,
see page 1095/1096.

[3)] Provided the admissible load capacity of the support arm system is adequate, see page 188.

Selection: Operating housings

3.2 Front design

Cross member
For horizontal and/or vertical division. With channel on both sides for mounting kits, see page 1037.

Material:
Extruded aluminium section, RAL 7035

Sealing bar
For horizontal and/or vertical division. The “slot-free” division produces a height gain of 28 mm.

Material:
Extruded aluminium section 8 x 20 mm, natural anodised

Adaptor plate

Material thickness:
3 mm aluminium, natural anodised.

Please specify the dimensions for the front panel and the desired holes and cutouts.

Spacing and built-in trim panel
For additional space for cable entry and for installing switches/ indicator lights, emergency off/ key switches, CD-ROM drives, interfaces etc. With channel on one side for mounting kits, see page 1037.

Material:
Extruded aluminium section, natural anodised.

Detailed drawing,
see page 1038.

Also required:
Mounting kit for the installation of front panels, operating panels and keyboards in command panels and keyboard housings, see page 1037.

With front panel hinged[4)] 3.2 9
If, for example, a disk drive built into the operator panel needs this free access.

Standard design
- Screw-fastened from the outside
- R/h hinge

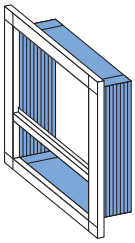
[1)] Not possible with spacer trim (cf. 3.4).

[2)] Unless otherwise specified: Sealing bar at the top, cross member at the bottom.

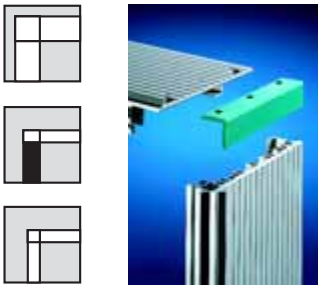
[3)] Only for use in conjunction with end trim.

[4)] Screw-fastened from the inside, with cam or l/h hinge on request.

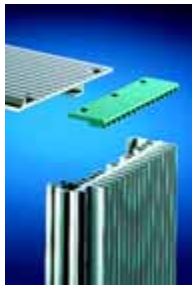
3.3 Cooling fins



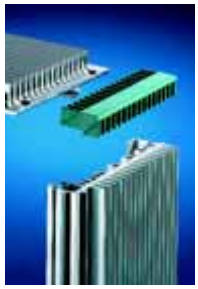
3.1	3.2	3.3	3.4	3.5	3.6	3.7	3.8
		■					



No fins 3.3 1



Fins at sides 3.3 2



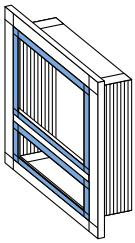
Fins all round 3.3 3

Fins are selected according to the heat loss to be dissipated, see page 155.

Enclosures in installation depth 185 mm and 328 mm are directly behind the front frame at a depth of 44 mm, without fins. The colour of the corner protectors matches the trim colour selected under 3.5.

3.4 Trim types

Detailed drawing, see page 1097.



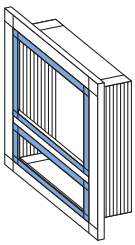
3.1	3.2	3.3	3.4	3.5	3.6	3.7	3.8
			■				

Cover trim 3.4 1
To conceal the front panel assembly screws. For front panel thickness up to 3.5 mm.

End trim 3.4 2
Attractively finishes off the space between the front panel and the frame section. For all front panel thicknesses.
Only this trim may be selected when installing drawers.

Spacer trim 3.4 3
For installed equipment flush with the frame section.
For front panel thickness approx. 3.5 mm.

3.5 Trim colours



3.1	3.2	3.3	3.4	3.5	3.6	3.7	3.8
				■			

Turqoise (similar to RAL 5018) 3.5 1

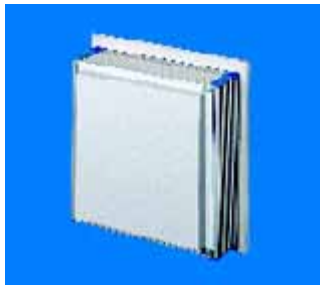
3.8 Rear panels

Screw-fastened 3.8 1

Material:
Aluminium,
natural anodised

Hinged[1] 3.8 2
For rapid
service access

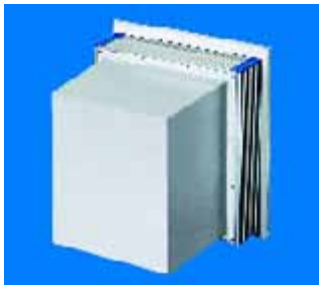
Material:
Aluminium,
natural anodised



Depth plus 45 mm 3.8 3
Hinged,
screw fastener

Material:
Sheet steel, RAL 7035

[1] On the longest side (right/bottom), cam with double-bit insert, may be exchanged for lock inserts 41 mm, type C, see page 888, plastic handles and T handles, type C, see page 886/887.



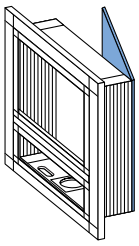
Depth plus 245 mm,
square[2], screw-fastened 3.8 4

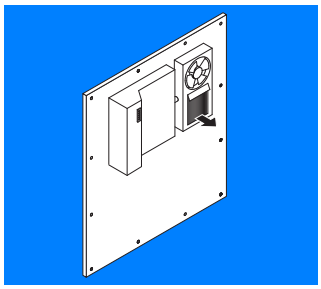
Material:
Sheet steel, RAL 7035

[2] For 482.6 mm (19″)/7 U concave

Hinged[1] 3.8 5
for heavy installed
equipment

Material:
Aluminium,
natural anodised

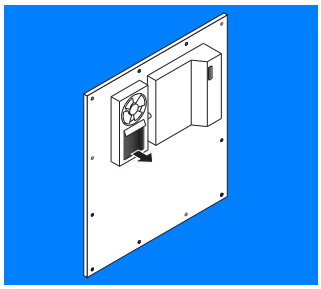




Screw-fastened with built-in VIP SK small cooling unit, condenser mounting top left 3.8 6
Recommendation for command panel design
(see 3.1 Installation depth, 3, 5, 7, 9)

Material:
Aluminium,
natural anodised

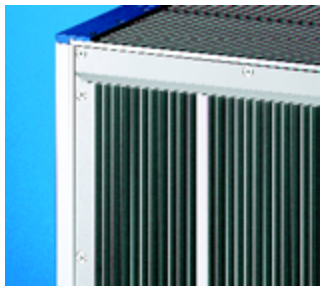
Detailed drawing,
see page 595.



Screw-fastened with built-in VIP SK small cooling unit, condenser mounting top right 3.8 7
Recommendation for command panel design
(see 3.1 Installation depth, 3, 5, 7, 9)

Material:
Aluminium,
natural anodised

Detailed drawing,
see page 595.



Rear cooling panel modular[3] 3.8 8
Significantly increases heat dissipation from the enclosure!

Material:
Extruded aluminium section, natural anodised

Detailed drawing and arrangement of the sections,
see page 1103.

3.1	3.2	3.3	3.4	3.5	3.6	3.7	3.8

[3] When installing the pull-out keyboard CP 6002.100 (see page 1048) in VIP 6000, design variant 3.1, no. 1, the 11 mm cooling fins protruding into the enclosure and screw channels in this area may be milled off.
Please state the installation position when ordering.

Selection: Keyboard housings

4.1 Keyboard housing

Without fins.

For installing or positioning keyboards on top (with a depth of 27 mm).

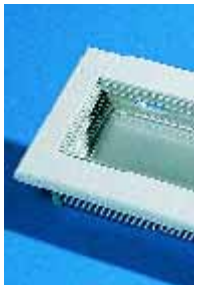
All keyboard housings are custom-produced to your dimensions. Where the wide front frame is selected, the width of the keyboard housing is dependent on the operating housing.

Material:
Extruded aluminium section

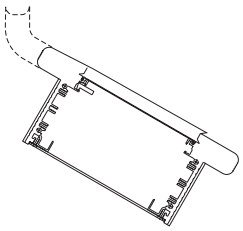
Detailed drawing,
see page 1098 – 1100.

Also required:

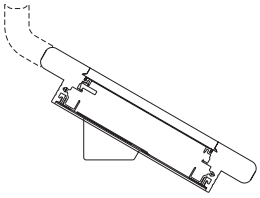
Mounting kit for installing front panels, operating panels and keyboards in command panels and keyboards housings,
see page 1037.

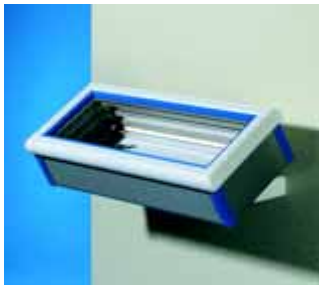


Installation depth 105 mm for built-in keyboards 4.1 1



Installation depth 44 mm for built-in keyboards 4.1 2



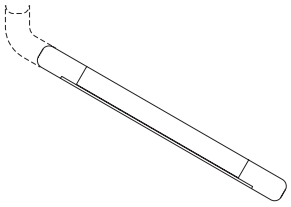


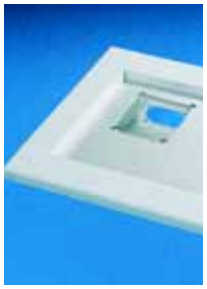
Example of the versatility of the keyboard housing: External mounting on doors
With all keyboard housings, on request the rear panel may be supplied prepared for external mounting on surfaces.

Also required:

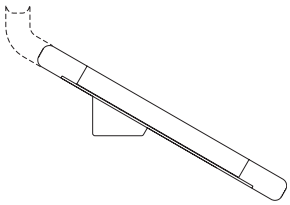
Enclosure duct connector CP 6006.000, see page 1035.
For mounting and cable entry.
Cross-brace for door TS 8800.960/TS 8800.980, see page 895,
when mounting on 600/800 mm wide doors TS, CM, CL, ES.

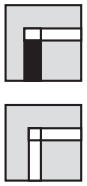
Depth 27 mm with cable entry grommet, for desktop enclosures 4.1 3



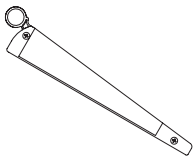


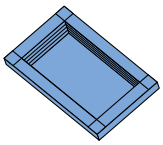
Depth 27 mm with cable tube, flexible, for desktop enclosures 4.1 4





Support for keyboards with cable entry grommet[1] 4.1 5





4.1	4.2	4.3	4.4	4.5

[1] Only for use in conjunction with hinged frame connector, see 4.4 design code number **5.**

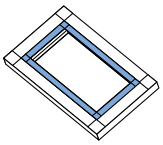
4.2 Trim types[1)]

Detailed drawing,
see page 1097.

Cover trim 4.2 1
To conceal the front panel assembly screws. For front panel thickness up to 3.5 mm.

End trim 4.2 2
Attractively finishes off the space between the front panel and the frame section. For all front panel thicknesses.

Spacer trim 4.2 3
For installed equipment flush with the frame section.
For front panel thickness approx. 3.5 mm.



4.1	4.2	4.3	4.4	4.5

[1)] Cannot be selected with keyboard housing depth 27 mm or support for keyboards. In such cases, please enter an **X.**

4.3 Trim colours[1)]

Note:
Enclosure corner protectors are likewise supplied in the chosen colour.
For larger orders, other colours are available on request.

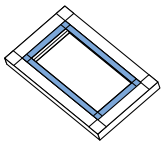
Turqoise (similar to RAL 5018) 4.3 1

Bright blue (similar to RAL 5005) 4.3 2

Bright red (similar to RAL 3001) 4.3 3

Pebble grey (similar to RAL 7030) 4.3 5

Graphite grey (similar to RAL 7024) 4.3 6



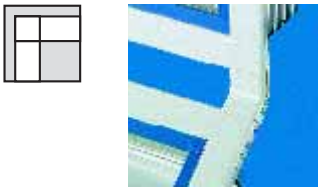
4.1	4.2	4.3	4.4	4.5

[1)] Cannot be selected with keyboard housing depth 27 mm or support for keyboards. In such cases, please enter an **X.**

Selection: Keyboard housings

4.4 Keyboard housing connector

With keyboard housing, supplied loose to connect operating and keyboard housings.



Frame connector (rigid) 4.4 1

Frame connector (adjustable) 4.4 2

Enclosure duct connector 4.4 3

	Frame connector (rigid)	Frame connector (adjustable)	Enclosure duct connector
Keyboard housing depth:	105	105	105
	44	44	–
	27	27	–
Tilt angle:	120°, rigid	75 – 120°, adjustable in 7.5° increments	120°, rigid
Cable tube:	See 4.5	See 4.5	Integral
	To fit operating and keyboard housings with a wide frame in the same width.	To fit operating and keyboard housings with a wide frame in the same width.	To fit operating housings with keyboard housings 105 mm deep, also available in different widths.
	Material: Die-cast zinc, RAL 7035	**Material:** Die-cast zinc, RAL 7035	**Material:** Aluminium, RAL 7035

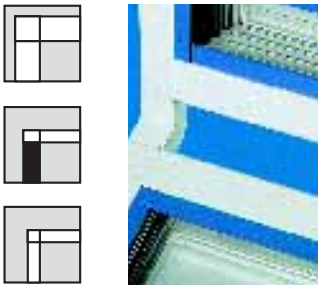
4.1	4.2	4.3	4.4	4.5

4.5 Cable tube



Without cable tube 4.5 0

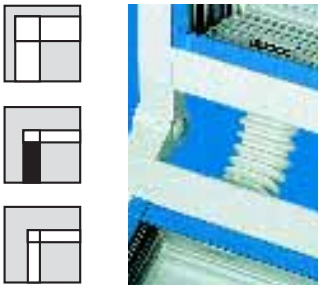
Cable tube, rigid 4.5 1

Suitable for cable entry when using the rigid frame connector (for wide frames) and keyboard housing with 105 mm installation depth.

Material:
Aluminium, RAL 7035

Note:
Not possible with:
3.1 Operating housing, design code numbers 3 and 7.

4.4 Keyboard housing connector, design code number 2.

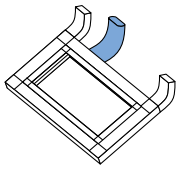


Cable tube, flexible 4.5 2

Suitable for cable entry when using the frame connector, adjustable, hinged frame connector or enclosure bar connector. Mounting on keyboard housings with 105, 44 or 27 mm deep.

Material:
Plastic, RAL 7035

Note:
Not possible with:
4.1 Keyboard housing, design code numbers 3 and 5.



4.1	4.2	4.3	4.4	4.5

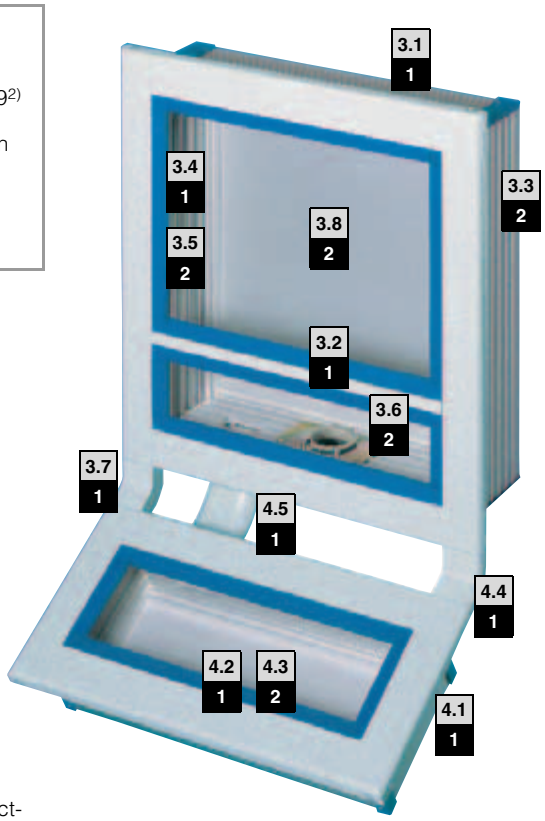
Examples

The picture opposite shows the solution we have chosen, together with its corresponding design code number.
The following key explains how the code number in our example is made up.

In order to deal with your enquiry/ order we will need the following information:

- Model No. front frame: CP 6392.X09[2)]
- The dimensions and number of panels/front panels to be installed in the operating/keyboard housing
- Design code number operating/keyboard housing

Order form, available on the Internet.



Operating housing

Model No.: CP 6392.009

Design code number:

3.1	3.2	3.3	3.4	3.5	3.6	3.7	3.8
1	1	2	1	2	2	1	2

- 3.1 1 Command panel, installation depth 155 mm
- 3.2 1 1 cross member
- 3.3 2 Cooling fins (sides)
- 3.4 1 Cover trim
- 3.5 2 Trim colour: bright blue
- 3.6 2 Support arm connection at the bottom
- 3.7 1 Connection with frame connector, rigid
- 3.8 2 Rear panel, hinged with double-bit fastener

Keyboard housing

Model No.: CP 6351.009

Design code number:

4.1	4.2	4.3	4.4	4.5
1	1	2	1	1

- 4.1 1 Keyboard housing, installation depth 105 mm
- 4.2 1 Cover trim
- 4.3 2 Trim colour: bright blue
- 4.4 1 Frame connector, rigid
- 4.5 1 Cable tube, rigid

[2)] Replace X with the number after selecting the front frame.

Note:
If the design code number does not cover your requirements, please enter an X here and enclose a written explanation.

Diversity: Enclosure, front design, attachment

The stylish, customised solution.

Three installation depths: 50 mm, 100 mm, 150 mm.

Hinged rear panels offer easy servicing.

Customised to order or in standard sizes

off the shelf.

Property rights:

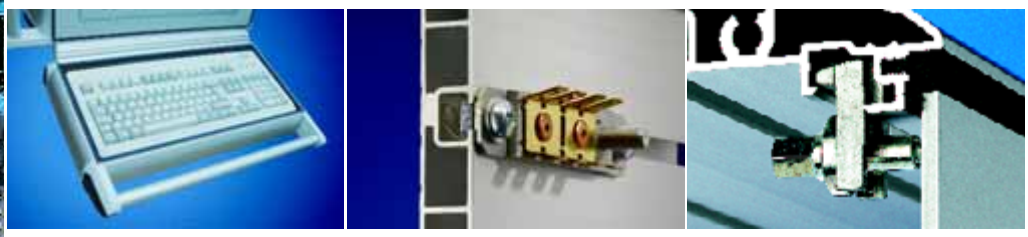
US Design Patent No. D 456,403

Always within reach



Tailored precisely to the operator's requirements, various handle sets may be fitted in accordance with ergonomic requirements. "Steering" the enclosure becomes child's play.

All-round spring groove channels for flexible interior installation and for mounting accessories.

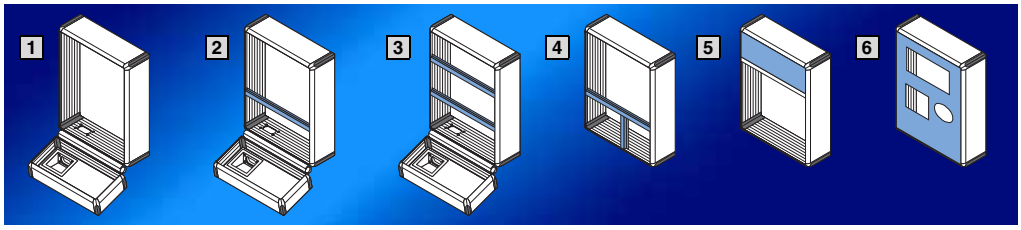
Superior seal helps to achieve protection category IP 65. For installations flush with the frame section with a front panel thickness of approx. 3.5 mm.

Individual front design

Subdivison of the operating level with Rittal standard modules covers every conceivable requirement. Individual cutouts may be achieved e.g. via the adaptor plate.

Should you have any queries, please contact your Rittal specialist advisor.

As we have said, there's always a solution!



1 Without subdivision
2 With cross member or sealing bar
3 With two cross members or sealing bars, including combinations
4 With combined horizontal/vertical cross member or sealing bar
5 With spacing panel and built-in trim panel. May be positioned at the top, bottom or side.
6 Adaptor plate with individual cutouts

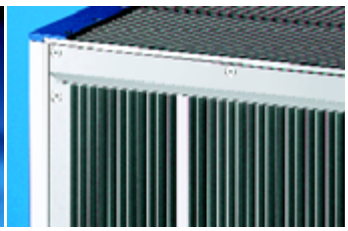
All-round attachment

Every attachment point is accessible on all sides!

Movable retaining claws create sufficient play to accommodate virtually all hole spacings (distance from the panel's outer edge 7 – 13 mm). Panels with screw fastening from the front, with studs or screw clamps, may be used.

Diversity: Rear panels, keyboard housings, ergonomics

Rear panels to order

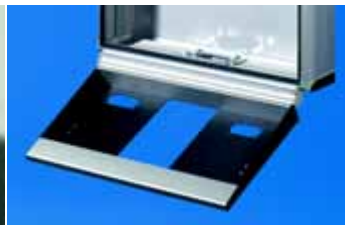


Choose the rear panel according to your servicing requirements:
- screw fastened
- hinged with cam fastener and double-bit insert
- hinged with quick-release fasteners

The modular rear cooling panel significantly increases dissipation of the heat loss from the enclosure!

This is achieved thanks to a combination of cooling fins on the outside and screw channels on the inside, which ensure optimum heat absorption and dissipation.

Keyboard housing



Select the most suitable keyboard housing, tailored to your requirements. Two installation depths are available. The keyboard housing with an installation depth of 50 or 100 mm and the keyboard support may be attached directly to the command panel or to the enclosure door.

Precisely the right position

Different viewing angles of the machine, whether the operating staff are tall or short, sitting or standing – with Rittal support arm systems, the Optipanel is always in the optimum position. All system components for rotating, tilting, swivelling, raising and lowering are combined with one another to create incredible diversity.
Depending on the system configuration, jib length and enclosure weight, support arm systems CP-S or CP-L are used.
If you want to combine a high load capacity with a stylish look, system combinations provide the ideal solution.

Stationary or mobile

Stand systems in a variety of designs – even height-adjustable – round off the application diversity of the Optipanel.

Selection: Operating housing/keyboard housing

It's so easy!

We need the following three pieces of information in order to deal with your enquiry/order:

- Model No.: CP 6382.009
- The dimensions and number of panels/front panels to be installed in the keyboard/operating housing
- Design code number

Order form,
available on the Internet.

Operating/keyboard housing

Model No. CP

6	3	8	2	.	0	0	9

Material:
Enclosure: Extruded aluminium section
Corner pieces: Die-cast zinc
Corner protectors:
Plastic, self-extinguishing
Sealing trim: Flexible plastic section

Surface finish:
Enclosure: Natural anodised
Corner pieces: Powder-coated in finely textured RAL 7035
Corner protectors and sealing trims:
Dyed similar to RAL 7024

For larger orders, other colours similar to RAL

- 5018 (turquoise)
- 5005 (bright blue)
- 3001 (bright red)
- 7030 (pebble grey)

are available.

Protection category:
IP 65 to EN 60 529
(if the openings in the enclosure are covered or sealed in accordance with the protection category).

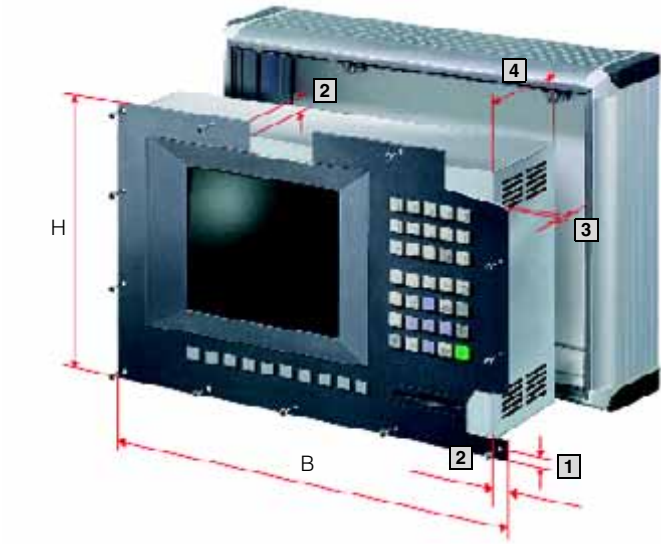
1. Panel dimensions

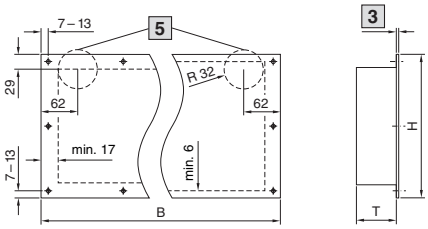
1.1 For operating housings and
1.2 For keyboard housings
On the order form, please state the width (B) x height (H) x depth (T) of the control components and the manufacturer/model.
(See installation criteria).

Checking the installation criteria

Please check whether your operator panel may be installed directly into the Optipanel. Otherwise, an adaptor panel is needed – cf. 2.2, design code number 2.
The dimensions of the operating and keyboard housing are derived from the dimensions of your panel and the number of cross members.

Note:
Different widths of operating and keyboard housings are possible (whereby only the keyboard housing may be wider than the operating housing).
For minimum size, refer to minimum front panel width under "Technical Details", page 1103.





1 **7 to 13 mm edge spacing** of the mounting hole or bolt.

2 **Front panel projection** on sides with mounting holes and bolts at least 17 mm, on sides without attachments at least 6 mm.

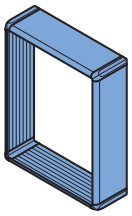
3 **Front panels up to 5 mm.** With a thickness of approximately 3.5 mm the front panel is flush with the sealing trim and the enclosure front.

4 **Installation depths:** Operating housing = 50 mm, 100 mm, 150 mm. Keyboard housing = 50 mm, 100 mm.

5 For versions with a hinged rear panel with cam fastener, the maximum installation depth is reduced by 25 mm in the vicinity of the lock.

2.1 Installation depth

Detailed drawing,
see page 1101.



2.1	2.2	2.3	2.4	2.5

50 mm 2.1 / 1

100 mm 2.1 / 2

150 mm 2.1 / 3

Note:
Installation depth > 150 mm over recessed rear panel on request (like VIP 6000, design variant 3.8, no. 3 and 4, see page 165).

2.2 Front design

Also required:

Mounting kit for installing front panels, operating panels and keyboards in command panels and keyboard housings,
see page 1037.

Detailed drawing,
see page 1101.

[1] Suitable quantity for sealing the individual separation points. Example: 3 front panels in operating housing = 2 separation points = 2 cross members/sealing bars included with the supply. Other combinations available on request.

[2] Screw-fastened from the inside, with cam or l/h hinge on request.

[3] **Detailed drawing,**
see page 1038.

Without cross member 2.2 0

With cross member[1] 2.2 1
For horizontal and/or vertical subdivision of the operating housing front.
With mounting channel on both sides to accommodate mounting kits,
see page 1037.

Material:
Extruded aluminium section, natural anodised

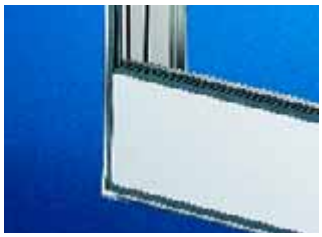
With an adaptor plate 2.2 2
(to specifications)

Material thickness:
3 mm aluminium, natural anodised.

Please specify the dimensions for the front panel and the desired holes and cutouts.

With spacing and built-in trim panel[3], top 2.2 3
For additional space for cable entry and for installing switches/indicator lights, emergency off/key switches, CD-ROM/disk drives, interfaces etc.

Material:
Extruded aluminium section, natural anodised



With spacing and built-in trim panel[3], bottom 2.2 4
For additional space for cable entry and for installing switches/indicator lights, emergency off/key switches, CD-ROM/disk drives, interfaces etc.

Material:
Extruded aluminium section, natural anodised

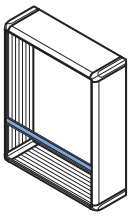
With sealing bar[1] 2.2 5
For horizontal and/or vertical subdivision of operating housings.
The “slot-free” division produces a height gain of 22 mm.

Material:
Extruded aluminium section 8 x 20 mm, natural anodised

With front panel, hinged[2] 2.2 6
For example, if a disk drive built into the operator panel needs this free access,
see page 1036.

Standard design:
- Screw-fastened from the outside
- R/h hinge

Material:
Front panel: 3 mm aluminium, natural anodised.
Extruded aluminium section: Natural anodised



2.1	2.2	2.3	2.4	2.5

2.3 Support arm wall and pedestal connection

Accessories:

Support arm components for connection of the Optipanel to the support arm system CP-S[1], CP-L see page 188 onwards. Pillars, see page 228 onwards.

Detailed drawing, see page 1102.

Without connection 2.3 0

Connection top 2.3 1

Connection bottom 2.3 2

Connection top and bottom[2)] 2.3 3

CP-L ▭ 120 x 65 mm for
Housing coupling CP 6525.1X0,
Enclosure attachment CP 6525.6X0,
Housing coupling CP-S, CP 6501.130
only applies to installation depth 100 and 150 mm

Connection top[1)] 2.3 4

Connection bottom[1)] 2.3 5

Connection top and bottom[1)2)] 2.3 6

CP-L, Ø 130 mm for
Housing coupling CP 6525.0X0,
Enclosure attachment CP 6525.5X0,
Angle coupling CP 6526.0X0
only applies to installation depth 150 mm

[1)] For support arm system CP-S, steel, for installation depth 50, 100 and 150 mm please add an **S** after the design code number.

[2)] Including a cover plate for sealing the unused section.

[3)] Unless otherwise specified, will be supplied in RAL 7024.

Note:
Wall mounting possible: hinged with CP 6016.200, see page 907.

Connection at rear, top[3)] 2.3 7

Connection at rear, bottom[3)] 2.3 8

CP-L ▭ 120 x 65 mm for
Housing coupling CP 6525.1X0,
Enclosure attachment CP 6525.6X0,

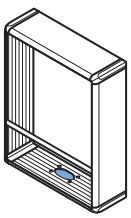
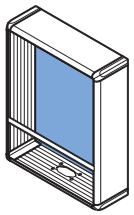
Housing coupling CP-S, CP 6501.130

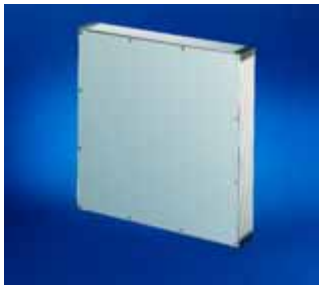


2.1	2.2	2.3	2.4	2.5

Selection: Operating housings

2.4 Rear panels





Rear panel screw-fastened

2.4 | 1

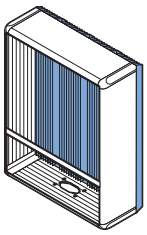
Rear panel hinged on longest side
Viewed from rear, hinged on the right or at the bottom[1) 2) 3) 4)].

2.4 | 2

Example of the versatility of the enclosure:
External mounting on doors
With all operating/keyboard housings, on request the rear panel may be supplied prepared for external mounting on flat surfaces.

! Also required:

Enclosure duct connector CP 6006.000, see page 1035. For mounting and cable entry.
Cross-brace for door TS 8800.960/TS 8800.980, see page 895, when mounting on 600/800 mm wide doors TS, CM, CL, ES.



Rear cooling panel, modular
Increases the dissipation of heat loss from the enclosure by approx. 10%.

2.4 | 3

Material:
Extruded aluminium section

Note:
When installing the pull-out keyboard CP 6002.100 (see page 1048) in an Optipanel, design variant 2.1, no. 3, the 11 mm cooling fins and screw channels protruding into the enclosure may be milled off in this area – please specify when ordering.

Detailed drawing,
see page 1103.

Rear panel hinged with quick-release fasteners[1)]

2.4 | 4

2.1	2.2	2.3	2.4	2.5

Note:
[1)] With a support arm connection at the rear, only possible on the side opposite the support arm connection.
[2)] Not for operating housings with an installation depth of 50 mm with keyboard housings.
[3)] Standard double-bit lock insert may be exchanged for 41 mm lock inserts, type C, see page 888, plastic handles and T handles, type C, see page 886/887.
[4)] With a hinged rear panel, the maximum installation depth in the vicinity of the lock is reduced by 25 mm (see page 173, drawing point **5**).

[1)]

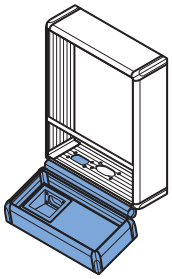
2.5 Keyboard housing

Width independent of operating housing.
The swivel bracket is infinitely adjustable from 80° to 155°.

Also required:

[1] Mounting kit for installing front panels, operating panels and keyboards in operating and keyboard housings, see page 1037.

Detailed drawing, see page 1102.



2.1	2.2	2.3	2.4	2.5

Without keyboard housing 2.5 0

With keyboard housing Installation depth 50 mm[1] 2.5 1

With keyboard housing Installation depth 100 mm[1] 2.5 2

With support for keyboards 2.5 3

Utility bars, vertically hinged with cable entry grommet[2] 2.5 4

[2] With a support bar connection at the bottom, from depth 150 mm, only in conjunction with: enclosure attachment CP-S (CP 6501.070), enclosure attachment CP-L for support arm connection ▭ 120 x 65 mm (CP 6525.6X0)

When mounting beneath surfaces, the bars may alternatively be pushed towards the rear.

Examples

The picture opposite shows the solution we have chosen, together with its corresponding design code number. The following key explains how the code number in our example is made up.

Operating/keyboard housing

Model No.: CP 6382.009

Design code number:

2.1	2.2	2.3	2.4	2.5
2	1	2	1	1

2.1 2 Command panel, installation depth 100 mm

2.2 1 With cross member

2.3 2 Support arm connection CP-L ▭ 120 x 65 mm, bottom

2.4 1 Rear panel, screw-fastened

2.5 1 With keyboard housing, installation depth 50 mm

We need the following three pieces of information in order to deal with your enquiry/order:

- Model No.: CP 6382.009
- The dimensions and number of panels/front panels to be installed in the keyboard/operating housing
- Design code number

Order form, available on the Internet.

Note:
If the design code number does not cover your requirements, please enter an X here and enclose a written explanation.

Operating housings

Features

Modern, flexible production technology demands solutions which precisely meet the required standards of ergonomics, user-friendliness, hygiene or corrosion protection at the operating interface. The Rittal operating housing range is tailored to these requirements. Supplemented by a support arm or pedestal system, system accessories or system climate control, an enclosure becomes a complete solution. All this is achieved quickly and practically on your behalf.

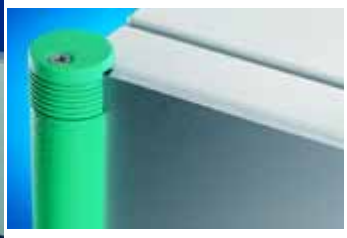
Compact Panel, aluminium

Front panels are inserted from the rear and secured with a screw clamp.

Rear door hinged optionally on the right or left by loosening the screws.

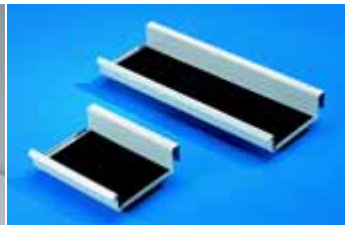
Mounting optionally on support arm system CP-S or directly with the wall attachment, vertically hinged, see page 908.

Command panel housing with door, with handle strips



For additional front panels of aluminium, the handle strips may be set forward by up to 5 mm.

Rear panel with welded nuts for the attachment of mounting plate or support rails.



Space for tools, measuring instruments or scanners with the utility shelf, screw connection, see page 1039.

Operating housing with handle strips

Interior installation of the enclosure via side mounting angles with system punchings.

Additional installation space is created by the perforated mounting strips on both sides in the rear door.

For external mounting of a terminal box as an additional keyboard housing, connectors CP 6005.100 may be used, see page 1034.

Operating housing with display panel front

For installation or servicing, the hinged display panel front may be opened from the inside by loosening the screws.

Interior installation of the enclosure via side mounting angles with system punchings.

For the support of keyboards. For programming and servicing work, the vertically hinged utility bars, CP 6514.200, may be externally mounted,
see page 1049.

Operating housing with wide VIP 6000 frame

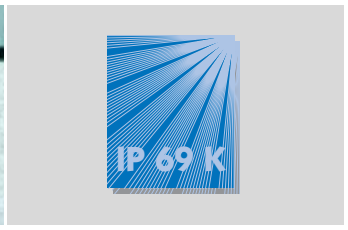
External mounting of VIP keyboard housings via frame connectors, rigid or adjustable,
see page 168.

Interior installation of the enclosure via side mounting angles with system punchings.

The interface flap SZ 2482.200 ensures secure accommodation of sockets, ports or drives,
see page 1059.

Premium Panel, stainless steel

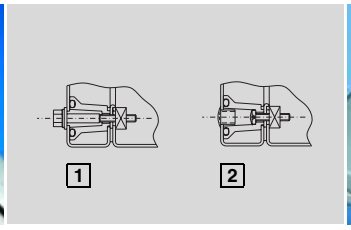
Exceptionally hygienic, thanks to easy-to-clean, external, highly resistant silicone seal.



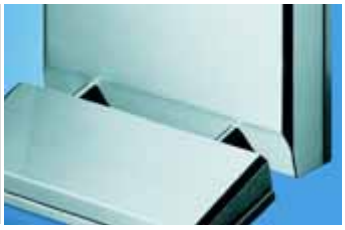
Pressure washer-resistant (protection category IP 69K) and high EMC shielding effect thanks to ideal shaping of the seal and all-round metallic contact between the enclosure and the rear panel.

Suitable for use in clean rooms to meet the most demanding requirements, certified by the Fraunhofer-Institut IPA.

Clear hygiene benefits compared with external hinges, rear panel bracket CP 6682.000,
see page 893.



Screw fastening of the rear panel optionally via external hex screws **1** or internal screws, concealed with plastic stoppers **2.**



Protected cable routing from the operating housing to the keyboard housing via a robust duct connector.

Features

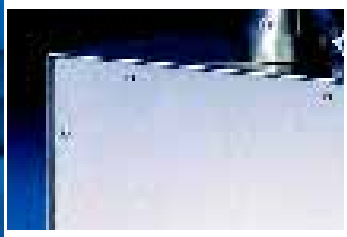
Command panel housing with door, stainless steel

Rear panel with welded studs for the attachment of mounting plate or support rails.

Simple mounting on the support arm system CP-S stainless steel by locating the pre-assembled screw in the cutout.

Safe handling when swivelling, thanks to side handle strips.

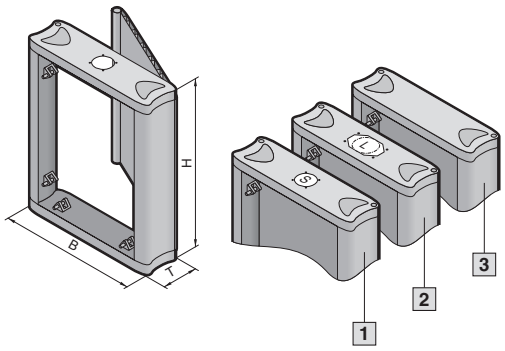
Operating housing, stainless steel



Perfect protection of keys or signal lamps thanks to internal front panel.

The operator panels and other command and indicator devices may also be fitted in the rotated enclosure.
In such cases, the front panel becomes a screw-fastened rear panel.

Simple mounting on the support arm system CP-S stainless steel by locating the pre-assembled screw in the cutout.



For small operating units built into front panels. The front panel is inserted from the rear and secured from the inside with screw clamps. Special front panels with a material thickness of between 2 and 6 mm are possible. Rear panel optionally hinged on the left or right.

Material:
Roof tray, base tray, rear panel:
Aluminium
Side parts:
Extruded aluminium section
Screw cover:
Plastic

Surface finish and colour:
Roof tray, base tray, side parts:
Powder-coated, RAL 7024
Rear panel: Natural anodised
Screw cover:
Similar to RAL 7024

Protection category:
IP 65 to EN 60 529

Supply includes:
Roof tray, base tray, rear panel, side parts, screw cover, including seal and screw clamp.

Rittal service:

- Other RAL colours
- Holes and cutouts in the roof and base tray

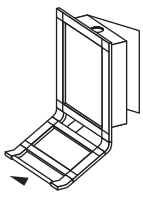
- **Cable tube connection at the bottom (1)**
- **Individual dimensions: W x H x D: 537 x 352 x 350 mm**



Additional mounting of a VIP 6000 keyboard housing is possible via the design code number (see page 166).
The front panel width refers to an enclosure width B – 54 mm and is achieved via a frame connector, which is included with the supply of the keyboard housing.

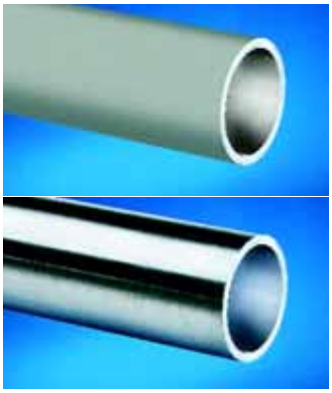
Accessories Page 832 **Stand systems** Page 228 **Support arm systems** Page 188 **VIP 6000 keyboard housing** Page 166

Support arm systems

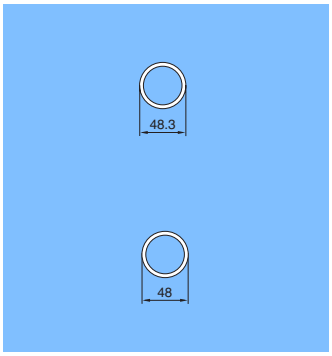
Features

Different viewing angles of the machine, tall or short operating staff, sitting or standing – with the support arm systems from Rittal, the interaction between monitoring and operating is achieved to perfection.

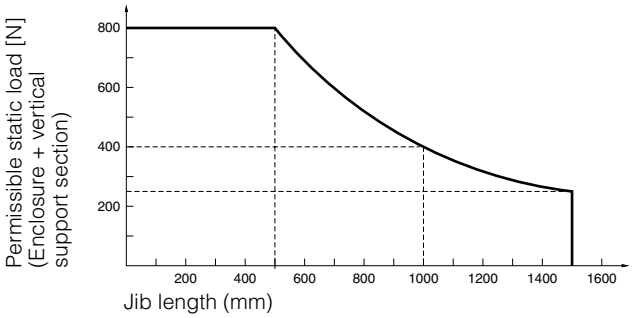
Three different systems are used, depending on the system configuration, jib length and enclosure weight.



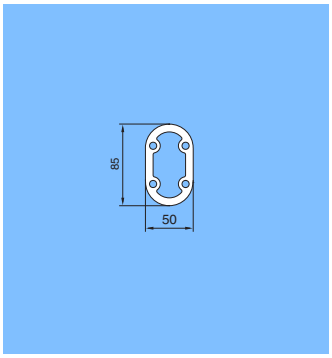
Load capacity CP-S steel/stainless steel



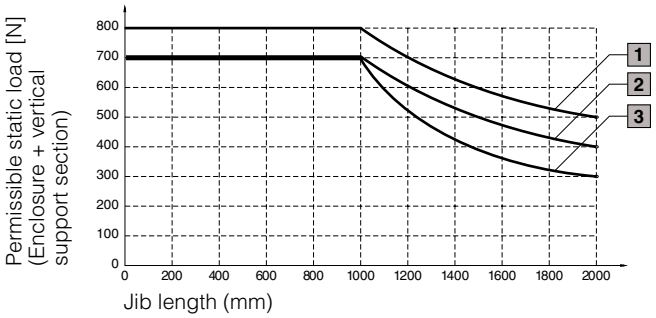
For use of CP-S in conjunction with CP-L (in the horizontal run of the system), the CP-L load diagram applies.



Load capacity CP-L

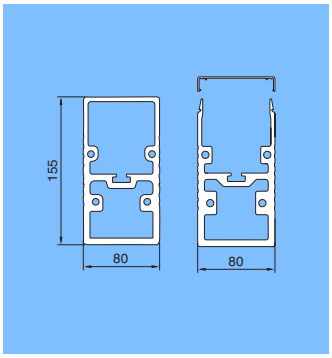


Permissible load depending on system assembly
Intermediate hinge CP 6523.0X0 should only be used once per system!

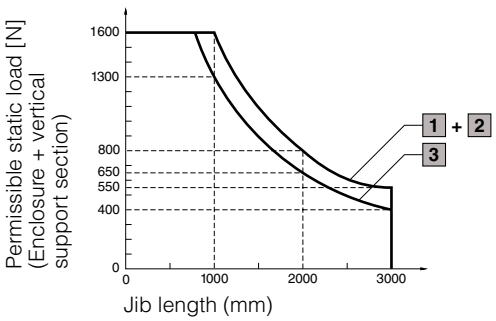


1 System assembly without joint
2 System assembly with one joint
3 System assembly with two joints

Load capacity CP-XL

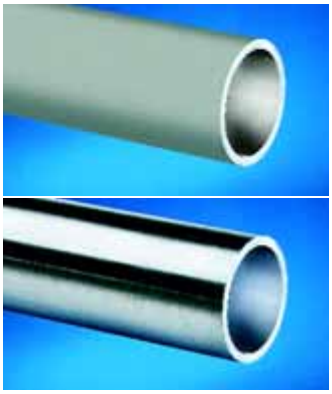


Permissible load depending on system assembly
Intermediate hinge CP 6120.000 should only be used once per system!

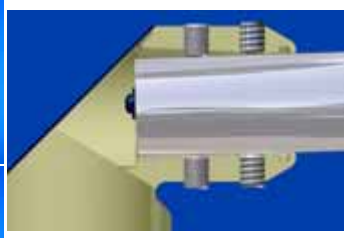


1 Open and solid support section
2 Solid support section with one joint
3 Open support section with one joint

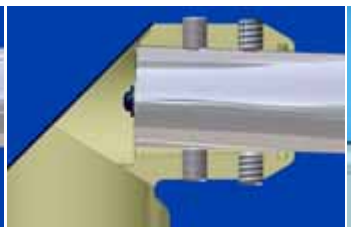
Features



CP-S steel and stainless steel



The angle coupling and angle piece, wall-mounted and top-mounted joint of the system from steel have an integral adjustment facility.



This means that deviations in the horizontal of ±2.5° may be balanced out in a flash.

The enclosures are easily located on the enclosure coupling of the stainless steel system with a pre-assembled screw.

Angle adaptor 90°
The ideal connection from a small to a medium-sized system.

Due to the differing requirements and slightly deviating attachment types, the support arm and enclosure should be made from the same material (steel or stainless steel).

CP-L aluminium

The alternative for the configuration of compact systems – the 90° support arm bracket.

Signal pillars may be mounted on many connecting elements of the systems using the mounting component,
see page 1045.

The height-adjustable support arm offers even better ergonomics.

Angle adaptor 90°
The ideal connection from a medium-sized to a large system.

CP-XL aluminium

With quadruple screw-fastening, the system offers a particularly high level of safety.

Two ducts allow the control cable and supply voltage to be separated.

A stable base point for the system – the custom-produced pillar,
see page 236.

Support arm systems

Getting from the enclosure to the matching support arm components

The diagrams show how the connection points of the Rittal enclosures may be continued with support arm systems, either directly or via adaptors.
There is a choice of four support arm systems, depending on your design, load and cabling requirements.

tiltable or rotatable components

system end

CP-S steel
For small and lightweight enclosures.

CP-S stainless steel
For use where there are special requirements in terms of corrosion and hygiene.

CP-L
The system for average command panel weights, stylish lines, and outstanding solution diversity.

CP-XL
The system for extreme loads. Also with open cable duct for super-easy cable entry.

	Enclosure	Continued with support arm system

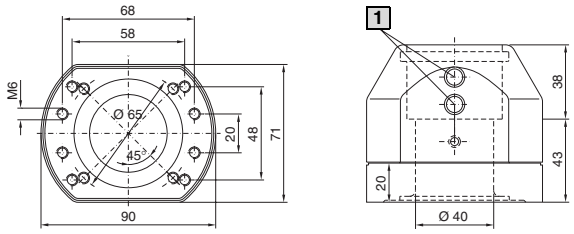
Rotation range:
Approx. 305°, lockable via clamping lever.
By inserting additional pins 4 x 16 mm to ISO 8752 the rotation range may be limited to ± 7°, 44°, 104°, 142°.

Colour RAL	Weight kg	Model No. CP
7024	1.1	**6501.050**

Material:
Die-cast zinc

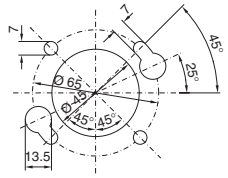
Supply includes:
Seal, 2 clamping screws for support section CP-S and clamping lever.



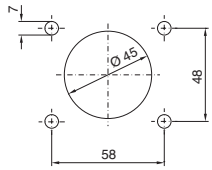
1 Clamping screw

Mounting cutouts

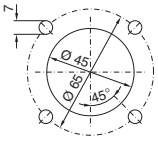
a)

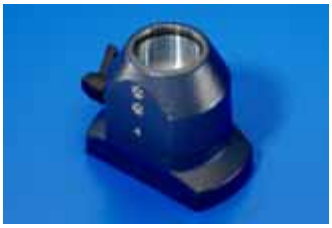


b)



Like cutout a), but without lock holes





Enclosure coupling CP-S

for support arm connection CP-L,
▭ 120 x 65 mm
For swivel mounting of the enclosure on the vertical section of the support arm system.

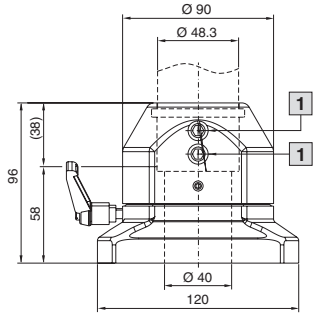
For mounting on:
- Optipanel to fit TFT monitors CP 6380.010 – .040 (see page 178)
- Optipanel W x H x D = 19″ x 7 U x 100 mm CP 6380.000 (see page 178)
- Optipanel installation depth 50 mm, with rear support arm connection.

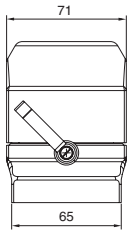
Rotation range:
Approx. 305°, lockable via clamping lever.
By inserting additional pins 4 x 16 mm to ISO 8752 the rotation range may be limited to ± 7°, 44°, 104°, 142°.

Colour RAL	Weight kg	Model No. CP
7024	1.5	**6501.130**

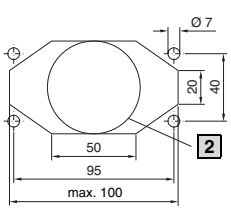
Material:
Die-cast zinc

Supply includes:
Seals, 2 locking screws.





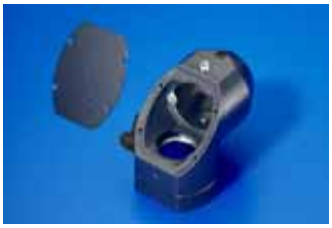
Mounting cutout, enclosure



1 Locking screw

2 alternative max. Ø 55 mm

Steel



Angle coupling 90° CP-S

For swivel fastening of the enclosure to the horizontal support arm system.

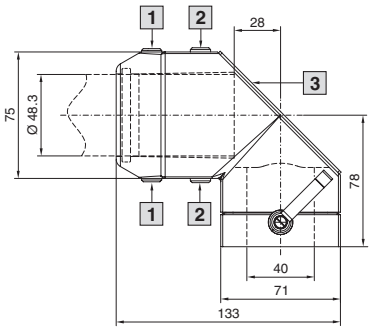
- Enclosure top-mounted or suspended
- Adjustment facility for the support arm system (see page 189)
- Removable panel for problem-free cable entry

Rotation range:
Approx. 305°, lockable via clamping lever.
By inserting additional pins 4 x 16 mm to ISO 8752 the rotation range may be limited to ± 7°, 44°, 104°, 142°.

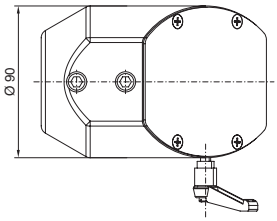
Colour RAL	Weight kg	Model No. CP
7024	1.6	**6501.120**

Material:
Cast aluminium/die-cast zinc

Supply includes:
Seals, 2 locking screws and 2 adjusting screws.

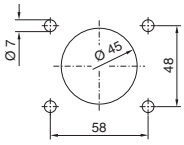


1 Locking screw
2 Adjusting screw
3 Removable plate

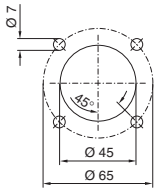


Possible mounting cutouts of enclosures

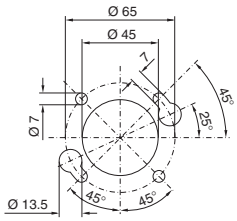
a)



b)



c)



Version c) for quick/one-man assembly

Angle adaptor 90° CP-L to CP-S

see page 214.

Angle piece 90° CP-S

For connecting horizontal and vertical support arm components.

- Adjustment facility for the support arm system (see page 189)
- Removable panel for problem-free cable entry

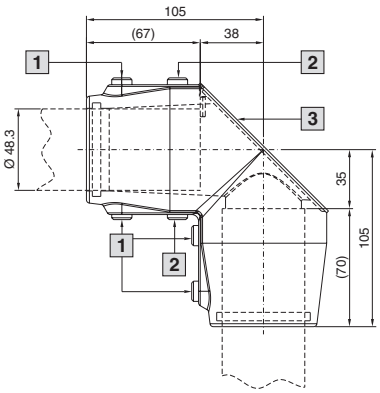
Material:
Cast aluminium

Supply includes:
Seals, 4 locking screws and 2 adjusting screws.

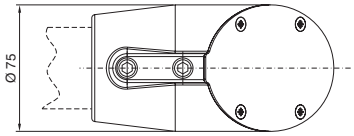
Colour RAL	Weight kg	Model No. CP
7024	1.1	**6501.140**

Accessories:

Mounting component for signal pillars (SZ 2375.030), see page 1045.



1 Locking screw
2 Adjusting screw
3 Removable plate



Mounting component CP-S

for signal pillars
For mounting a signal pillar with connection component for tube mounting on the angle piece 90° CP-S, see page 1045.

Support arm system CP-S

Steel

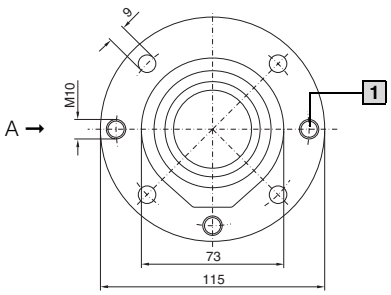
Wall/base mounting CP-S

For rigid attachment of the support section to surfaces. With flange for front mounting.

Material:
Cast aluminium

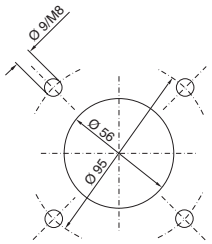
Supply includes:
Seal, 2 clamping screws for support section CP-S and 3 pre-fitted adjusting screws.

Colour RAL	Weight kg	Model No. CP
7024	0.7	**6501.110**

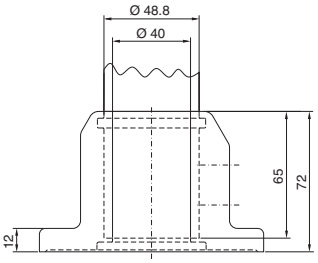


1 Adjusting screw

Mounting cutout



View A



Top mounted joint CP-S

For swivel mounting of the support arm system to horizontal surfaces.

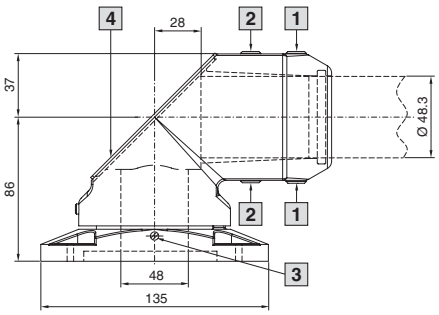
- Enclosure top-mounted or suspended
- Adjustment facility for the support arm system (see page 189)
- Removable panel for problem-free cable entry

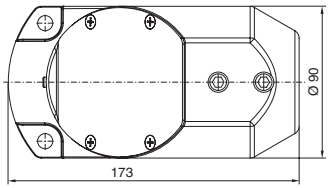
Rotation range:
Approx. 300°. By inserting additional pins 6 x 20 mm to ISO 8752 the rotation range may be limited to ± 6°, 51°, 96°. To lock the joint, the screw may be exchanged for standard clamping lever M6 x 25 mm.

Colour RAL	Weight kg	Model No. CP
7024	1.8	**6501.160**

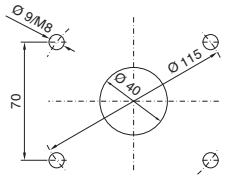
Material:
Cast aluminium

Supply includes:
Seals, 2 locking screws and 2 adjusting screws.





Mounting cutout



1 Locking screw
2 Adjusting screw
3 Screw for adjusting rotatability
4 Removable plate

Wall mounted hinge CP-S

For vertically hinged mounting of the support arm on vertical surfaces.

- Machined keyhole as mirror image for support arm outlet at the top or bottom for easy one-man assembly.
  – Pre-mount the screws on a vertical surface
  – Locate the wall-mounted hinge (support arm system pre-mounted)
  – Tighten the screws
- Adjustment facility for the support arm system (see page 189)
- Removable panel for problem-free cable entry

Rotation range:
Approx. 300°. By inserting additional pins 6 x 20 mm to ISO 8752 the rotation range may be limited to ± 6°, 51°, 96°. To lock the joint, the screw may be exchanged for standard clamping lever M6 x 25 mm.

Colour RAL	Weight kg	Model No. CP
7024	2.2	**6501.150**

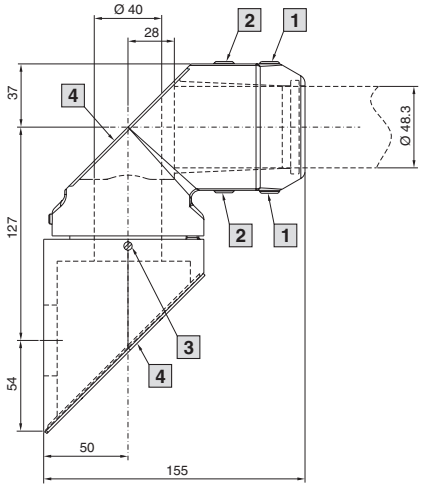
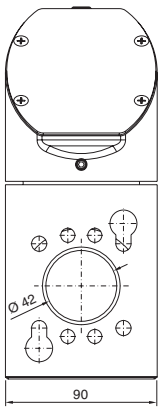
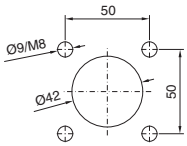
Cast aluminium

Supply includes:
Seals, 2 locking screws and 2 adjusting screws.





Mounting cutout 90°



1 Locking screw
2 Adjusting screw
3 Screw for adjusting rotatability
4 Removable plate

Support arm system CP-L

Fast selection

Make a simple sketch showing the basic form of the support arm.
Next, select the corresponding support arm components.
Start with **1** system start by selecting the appopriate enclosure situation.

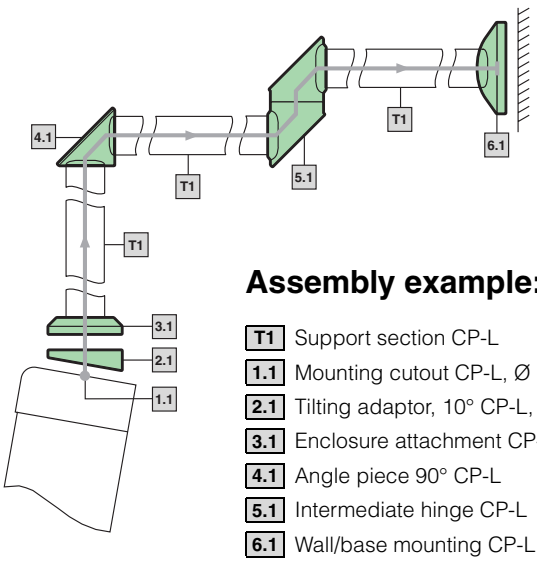
Continue with CP-L according to the item numbers.

System changes are indicated by the colour.
Violet = CP-S
Blue = CP-XL

System continuation/system end:
all directions
vertical
horizontal
angled
tiltable or
rotatable components

From position **3** enclosure attachments, a support section is required between each component (minimum length approx. 100 mm, for wall/floor mounting approx. 160 mm).
The cross-sections indicate the installation position(s).

X = 0 (RAL 7030)
X = 1 (RAL 7024)



Assembly example:

- **T1** Support section CP-L
- **1.1** Mounting cutout CP-L, Ø 130 mm
- **2.1** Tilting adaptor, 10° CP-L, Ø 130 mm
- **3.1** Enclosure attachment CP-L, Ø 130 mm
- **4.1** Angle piece 90° CP-L
- **5.1** Intermediate hinge CP-L
- **6.1** Wall/base mounting CP-L

Notes:

Re T2
Support arm, height adjustable should always be inserted as the first horizontal component after the enclosure.

Re 5.1 / 6.3 / 6.4
It is always expedient to use only one intermediate hinge or one wall mounted hinge. Two joints will restrict load capacity and make positioning the command panel more difficult.
Load diagram,
see page 188.

Re 4.1
Two angle pieces may also be used one after the other.

5 Intermediate hinge

5.1 Intermediate hinge CP-L

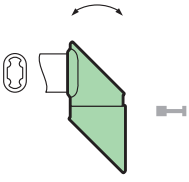
6.4 Wall mounted hinge CP-L

CP 6521.0X0, see page 217



Support arm, height adjustable

Support arm, height adjustable CP-L

Offers enhanced ergonomics thanks to:

- Adjustment range
  – for tall and short operators
  – for seated and standing work
  adjustable to up to 800 mm as required via an adjusting screw at the front of the support arm.
- Precise coordination of the compression spring to the enclosure weight via an adjusting screw at the rear of the support arm.
- Complete functional reliabilty – if the compression spring breaks, the arm will remain in position.
- Plastic casing clips off for access to the integral U-section cable tray.
- Tilting angle of the mounted enclosure is identical in every height position.

Material:
Steel

Supply includes:
Round tube with compression spring relief and U-section cable tray, 2 threaded connectors, plastic casing, including assembly parts.

Note:
Connection pieces for other support arms available on request.

Support arm system CP-L

Aluminium

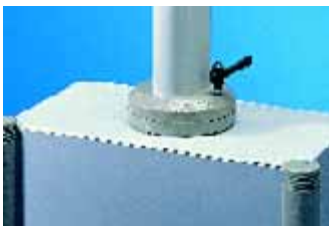
Optipanel support plate

For mounting on the enclosure section.
The rear panel or door are recessed in this area, thereby ensuring easy access in case of servicing.

Material:
Cast aluminium

Supply includes:
Seals and assembly parts.

Weight kg	Model No. CP
0.2	**6508.100**



Housing coupling CP-L

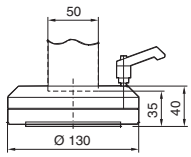
for support arm connection Ø 130 mm
For swivel mounting of the enclosure on the vertical section of the support arm system.

Rotation range:
Approx. 310°, lockable via clamping lever.
By inserting additional pins 5 x 18 mm to ISO 8752, the rotation range may be limited to ±5°, 65°, 95° and 155°.

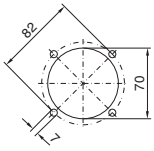
Material:
Die-cast zinc

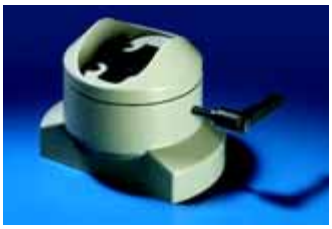
Supply includes:
Seals and self-tapping screws for CP-L support section attachment.

Colour RAL	Weight kg	Model No. CP
7030	1.7	**6525.000**
7024	1.7	**6525.010**



Mounting cutout
Enclosure CP-L, Ø 130 mm





Housing coupling CP-L

for support arm connection ▭ 120 x 65 mm
For swivel mounting of the enclosure on the vertical section of the support arm system.

Rotation range:
Approx. 350°, lockable via clamping lever.
By inserting additional pins 6 x 20 mm to ISO 8752, the rotation range may be limited to ±5° and ±100°.

Material:
Die-cast zinc

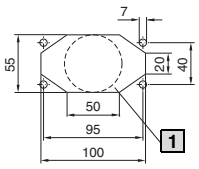
Supply includes:
Seals and self-tapping screws for CP-L support section attachment.

Colour RAL	Weight kg	Model No. CP
7030	1.4	**6525.100**
7024	1.4	**6525.110**

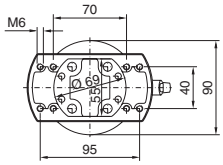
Accessories:

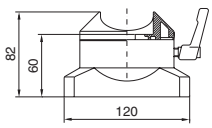
Connection console CP-L (CP 6508.0X0), see page 211.

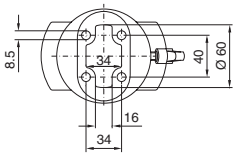
Mounting cutout
Enclosure CP-L, ▭ 120 x 65 mm

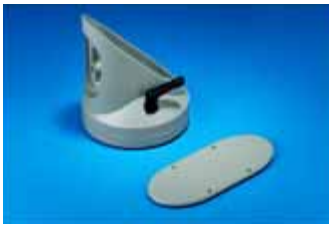


1 Alternative max. Ø 55 mm









Angle coupling 90° CP-L

for support arm connection Ø 130 mm
For swivel mounting of the enclosure on the horizontal part of the support arm system. Enclosure may be suspended or top-mounted.
The removable plate enables problem-free cable entry.

Rotation range:
Approx. 310°.
By inserting additional pins 5 x 18 mm to ISO 8752, the rotation range may be limited to ±5°, 65°, 95° and 155°.

Material:
Cast aluminium/die-cast zinc

Supply includes:
Seals, adjustment set and self-tapping screws for CP-L support section attachment.

Colour RAL	Weight kg	**Model No. CP**
7030	1.9	**6526.000**

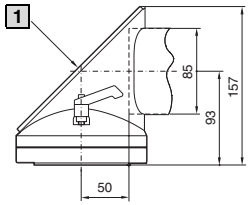
Mounting component for signal pillars (SZ 2375.000), see page 1045.



1 Removable plate
75 x 174 mm

Support arm system CP-L

Aluminium

Articulated joint 90° CP-L

The swivel connection between horizontal and vertical support sections.
With very slimline enclosures, there is no need for the deep housing coupling. With the shallow enclosure attachment (CP 6525.2X0), the support section may also be attached with its wide side.

Rotation range:
Approx. 325°.
Option of limiting the rotation range via the use of additional pins 5 x 18 mm to ISO 8752 to ±54° and ±98°.

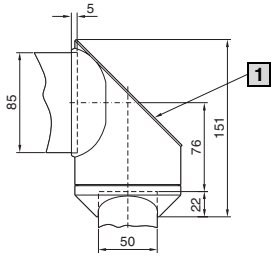
Material:
Cast aluminium/die-cast zinc

Supply includes:
Seals, self-tapping screws for support section attachment and adjustment set.

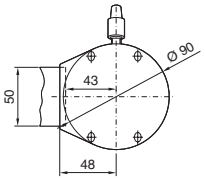
Colour RAL	Weight kg	**Model No. CP**
7030	1.2	**6524.200**
7024	1.2	**6524.210**

Also required:

Enclosure attachment, locatable CP-L for support arm connection ▭ 120 x 65 mm (CP 6525.2X0), see page 210,
or enclosure attachment CP-L for support arm connection ▭ 120 x 65 mm (CP 6525.6X0), see page 207.



1 Removable plate



Angle adaptor 90°

Connection component between:
- small and larger support arm systems.

Outlet optionally at the top or bottom if this configuration is chosen for static or visual reasons.
The removable cover ensures easier cable entry.

Material:
Cast aluminium

Supply includes:
Seal for support section attachment.

Note:
Mounting component for signal pillar available on request.

	Colour RAL	Weight kg	**Model No. CP**

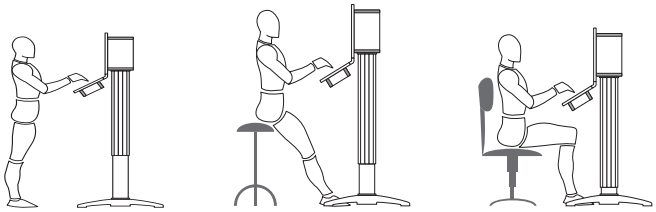
Stand systems

Features

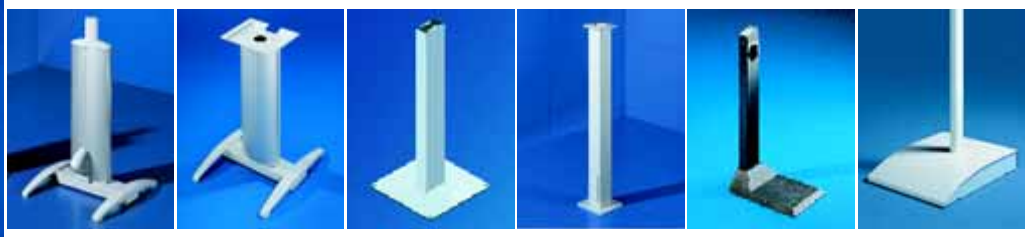
Bringing movement to Rittal stand systems, to meet all your ergonomic and technical requirements.

For every enclosure type, height variability, mobile use, and accommodation of cables.

Our extensive solution diversity meets every conceivable requirement.



Powerful pillars with numerous options – fixed …



Pedestal for Command Panel
with support section CP-L

Pedestal for IW worktops

Pillar, small
For compact assemblies

Pillar, large
The robust base point for heavy assemblies.

Pedestal for operating housing
Suitable for side mounting of operating housings.

Pedestal base plate, large

… and with variable height

Lifting pillar, electric
Height adjustment (from 670 to 1140 mm), spindle drive secured against unintentional dropping.

Support section, height-adjustable
Adjustment range from 732 to 1122 mm. Inner section for external mounting of operating housings.

Pedestal, modular, small
for the configuration of compact operating stations. Height of support section may be shortened by sawing to the required length.

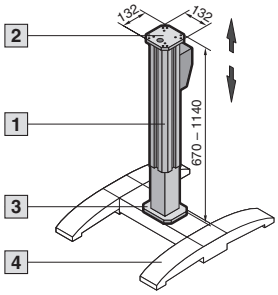
Pedestals in every variant – fixed or mobile

Pedestal base plate, large
Fitted with: Cutout for concealed mounting of cable conduit adaptors and PG segments.

Cross member with cast feet
Steel cross member with mounting holes for lifting pillar.

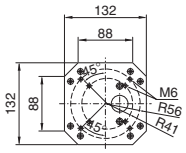
Pedestal, mobile
for changing locations.

Pedestal, height-adjustable

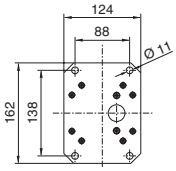


May be compiled from the following modules:	Model No. CP	Page
1 Lifting pillar, electric	**6142.000**	see below
Control unit for: – Manual operation – External mounting on surfaces/enclosures	**6142.010** **6142.020**	
4 Cross member with cast feet	**6142.100**	233

Mounting surface Head plate



Mounting surface Base plate



1 Lifting pillar, electric

Height adjustment 470 mm (from 670 to 1140 mm), spindle drive locked against unintentional dropping.
With electronic overload cutout to protect the drive.
Adjusting unit made from extruded aluminium section with groove on all sides for individual mounting using accessory attachment CP 6142.030.

2 Head plate

- For direct mounting of worktop attachment IW, enclosures with support arm connection
  – CP-L, Ø 130 mm
  – CP-XL
- For swivel mounting of enclosures, including those with keyboard support via wall/base mounting bracket, small CP-L CP 6520.510, in conjunction with support arm system CP-L, see page 200.

3 Base plate

For external mounting on the cross member or a sub-structure provided by the customer.

Weight kg	Packs of	Model No. CP

or enclosure coupling CP-S	**6501.050**	195

External mounting of operating housings or other devices:

A Direct screw-fastening

B With tilt adjuster 2

C With attachment 6501.070 or housing coupling 6501.050 CP-S, see page 194/195.

Support arm section

height-adjustable

Adjustment range from 732 to 1122 mm.
Inner section for external mounting of operating housings.
External section with:

- Clamping screws at the rear for external mounting on pedestal base plate CP 6146.100
- Clamping lever for height fixing
- Surface for external cable routing.

Material:
Extruded aluminium section, natural anodised

Supply includes:
Inner and outer section including locking lever and assembly parts for external mounting on the base plate and enclosure.

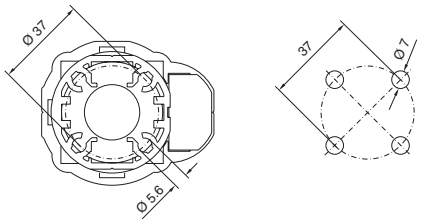
Weight kg	Packs of	Model No. CP
3.0	1	**6146.200**

Accessories:

Tilt adjustment CP 6146.300, see page 231.
Pedestal base plate CP 6146.100, see page 231.
Attachment CP-S CP 6501.070, see page 194.
Housing coupling CP-S CP 6501.050, see page 195.

Rittal service:

Other heights available on request.



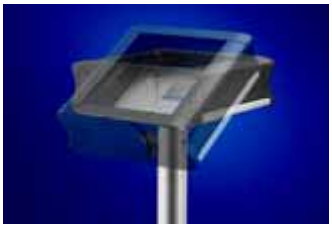
Gas pressurised spring

- For relief with height adjustment
- Optional installation
- Internal mounting
- Load capacity 15 kg
- Length 490/885 mm

Supply includes:
Assembly parts for installing in the support section, height-adjustable.

Packs of	Model No. CP
1	**6146.400**

Optipanel Page 170 **Compact Panel** Page 183



Tilt adjustment

For direct top-mounting on enclosures with mounting cutout:
- CP-S
- CP-L, ▭ 120 x 65 mm
- CP-L, Ø 130 mm

Cannot be combined with enclosure attachment or coupling.

Adjustment range:
± 30°

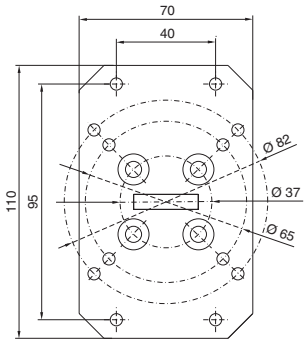
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Locking lever and assembly parts for height-adjustable mounting on the support section.

Packs of	Model No. CP
1	**6146.300**

Rittal service:

As tilt adjustment for support arm system CP-S on request.



Pedestal base plate

With large surface for stability and welded tube connectors (Ø 48.3 mm) to accommodate the external profile of the support section, height-adjustable.

Material:
Sheet steel, powder-coated

Colour RAL	Packs of	Model No. CP
7024	1	**6146.100**

Pedestal

One oval panel is permanently screw-fastened, whilst the other can be opened by "spreading" with a screwdriver for easy laying of cables.
In order to ensure opening of the front panels, we recommend that the adjustable frame connector or hinged frame connector be used with the Command Panel and VIP 6000 with keyboard housing (see page 907).

Material:
Feet: Cast aluminium
Cross member, vertical support tubes: Steel
Panels: Aluminium section

Supply includes:
for Command Panel:
2 cast aluminium feet,
1 cross member made of steel,
2 steel support tubes welded to cross member,
2 oval panels made from aluminium section,
1 top cover made from cast aluminium with support section CP-L,
partially pre-assembled.

for IW worktops:
2 cast aluminium feet,
1 cross member made of steel,
2 steel support tubes welded to cross member,
2 oval panels made from aluminium section,
1 worktop attachment of sheet steel.

	for Command Panel		for IW worktops

Pedestal base plate
small

- With one hole at the rear for commercially available cable conduit gland M20.
- With two holes at the top (including sealing bung) for floor attachment.
- Prepared on the inside for a cable clamp for strain relief.

Material:
Sheet steel, 2.5 mm

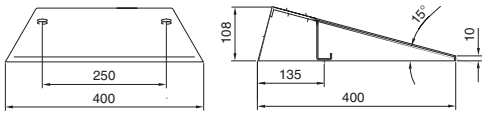
Supply includes:
Assembly parts.

Note:
Commercially available screws up to M8 may be used for floor attachment.

Weight kg	Colour RAL	Model No. CP
6.3	7035	**6143.200**

Accessories:

Cable clamp DK 7077.000 or DK 7078.000, see page 981.



Pedestal base plate
large

- Cutout for concealed mounting of cable conduit adaptor M50
- Cutout for PG segments (EL 2235.010 to EL 2235.080) or cable conduit adaptor up to Ø 70 mm
- Integral cable clamping bracket.

Material:
Sheet steel, powder-coated

Supply includes:
Integral reinforcement and mounting cutout for support section CP-L or CP-XL, including assembly parts for mounting the support section.

For support arm section	Colour RAL	Weight kg	Model No. CP
CP-L	7035	12.4	**6137.535**

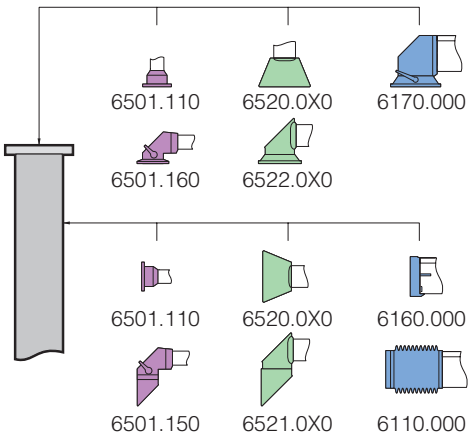
Pillars



Detailed drawing,
see page 1108.

Pillar

The stable base point for the support arm system. The attachment of additional enclosures, e.g. for security systems, is also possible.
There is a choice of 2 cross-sections:
- 140 x 140 mm
- 200 x 200 mm

Design:
Base plate 15 mm thick, with four mounting holes, cutout in the base plate according to the cross-section for cable entry from below. Pedestal tube (wall thickness 5 mm) welded to the base plate, with connection facilities for support arm systems as per the selection table.

Delivery time:
Extended delivery times

Material:
Steel, spray-finished

Colour:
RAL 7035

Supply includes:
Assembly parts for support arm system according to selection.

Note:
Customer-specific designs, such as:
- Other RAL colours
- Drilling patterns
- Heights
- Consoles for additional enclosures

available on request.

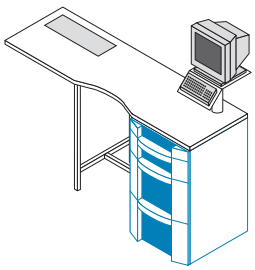
Industrial workstations

Features

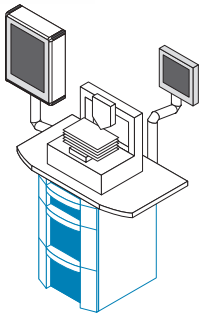
For Rittal, industrial workstations means the ability to create professional workstations for virtually any application from a comprehensive modular system.

In conjunction with operating housings, support arm systems, PC enclosures and the diverse range of system accessories, there are virtually no limits to your creativity.

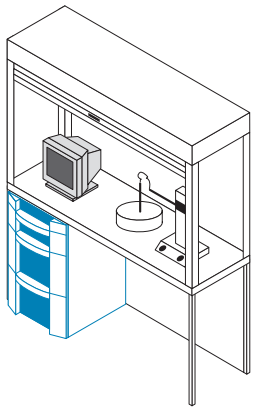
Here are few examples:



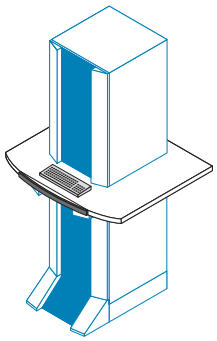
Workbench/assembly bench
consisting of:
- IW enclosure
- IW pedestal
- Individual worktop



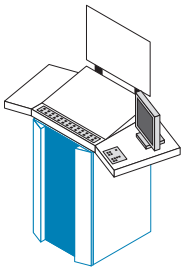
Laboratory equipment and **small machinery** consisting of:
- IW enclosure
- Worktop
- Support arm system
- Operating housings



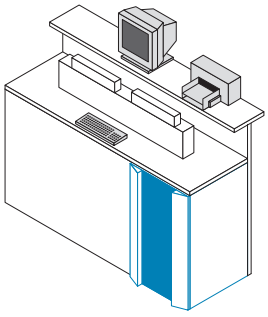
Protective cabinets:
with lockable roller blind on request.



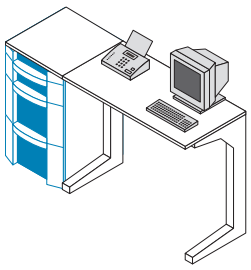
Measurement/control systems:
"More space" with the enclosure on top of the worktop.



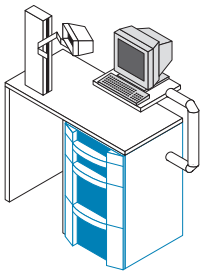
Control desks e.g. for printing presses consisting of:
- IW enclosure
- Individual worktop and assemblies



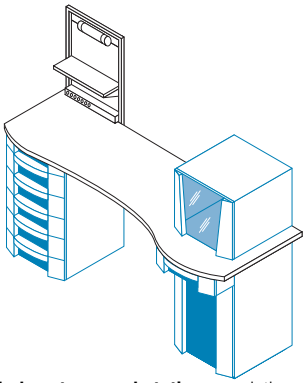
Workbench consisting of:
- IW enclosure for tools etc.
- Individual worktop with shelf for monitor, printer etc.



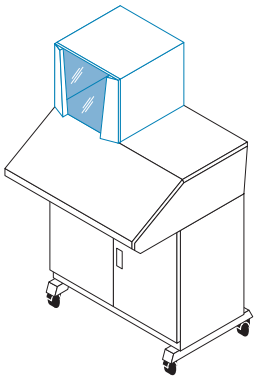
Calibration/measuring station
consisting of:
- IW enclosure
- IW pedestal
- Worktop



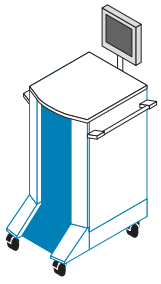
Programming station:
Ergonomically adaptable via the support arm system.



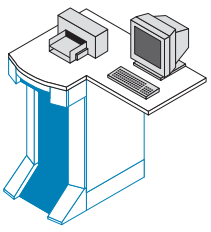
Laboratory workstation consisting of:
- IW enclosures
- Worktop
- Monitor housing
- Shelf system
- Socket strip, light



Process visualisation:
e.g. on production line via swivel-mounted IW monitor housing on AP console system.



Mobile workstation/workshop trolley consisting of:
- Base/plinth with castors
- IW enclosure
- Worktop
- Handle system
- Operating housing



Scanner/PC station consisting of:
- IW enclosure
- Individual worktop

Features

IW Quality Point

The integration of a TFT monitor creates space on the work surface.

The rotatable printer shelf and the paper tray are a perfect duo for the secure accommodation of printers in an industrial environment.

Optimum glare-free illumination of the workplace with the integral workstation light.

IW enclosure

In two standard heights, optionally with designer door or glazed door. Offers plenty of storage space.

With drawer front for an orderly filing system.
A pull-out lock which prevents the simultaneous opening of several drawers is integrated to increase operational safety.

If no enclosure is needed to accommodate documents or equipment, the IW pedestal may be used instead. By combining with a worktop, a large work surface is created.

IW monitor housing

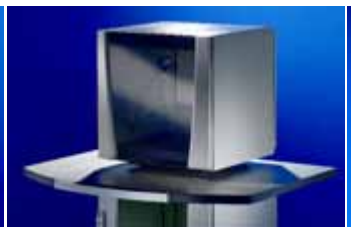
In two sizes for monitors up to 17″ and 21″ screen diagonal respectively. In conjunction with a turntable, the monitor can be viewed from all angles.

TFT monitors are increasingly being used in industrial environments. Thanks to the large number of standardised system components, TFTs may be easily integrated into the workstation.

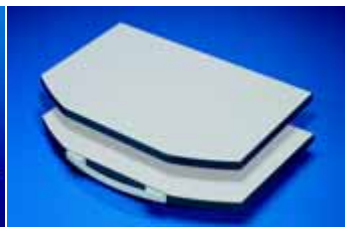
Mounting of a TFT monitor without reducing the work space. With the aid of the enclosure attachment, the angle of the display is ideally adapted to suit the user.

IW worktops

14 different worktops in 7 different sizes accommodate virtually all requirements.



Monitor housings may be mounted either rigidly or swivel-mounted on worktops prepared for a turntable.



Worktops with or without a handle – both variants are available off the shelf.

Fast selection

Choose the appropriate IW components according to your requirements.

► Continue with system assembly using the item numbers shown beneath the arrow.

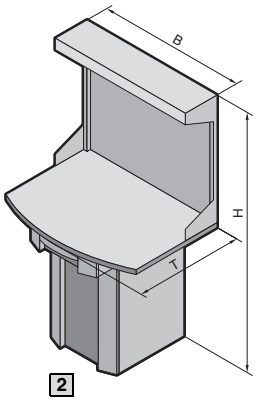
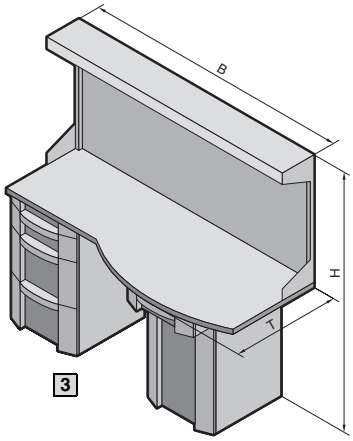
Quality Point L and XL





The complete system for use as a testing station in industrial environments (e.g. directly at the machine) where testing needs to be carried out and data processed electronically. An individual PC system is integrated to perfection.

Benefits:
- Plenty of space to accommodate test equipment
- Easy integration of PCs, monitors, printers etc.
- Integral lighting
- Theft protection

Colour:
RAL 7015/7035/9006

Supply includes Quality Point L:
Enclosure with keyboard drawer section IW 6900.410, see page 246, worktop W/H/D: 1000 x 38 x 895 mm, Quality Point attachment with side system punchings on a 25 mm pitch pattern for the attachment of system accessories (e.g. punched sections), workstation light IW, 2 x 36 W, 230 V, 50 Hz.

Supply includes Quality Point XL:
Enclosure with drawer front (left), IW 6900.600, see page 246, enclosure with keyboard drawer section (right) IW 6900.410, see page 246, worktop W/H/D: 2000 x 38 x 895 mm, Quality Point attachment with side system punchings on a 25 mm pitch pattern for the attachment of system accessories (e.g. punched sections), workstation light IW (quantity: 2), 2 x 36 W, 230 V, 50 Hz.

1 Assembly example
2 Quality Point L
3 Quality Point XL

Material:
Enclosure, see page 246, Quality Point attachment, see page 250, Worktop, see page 248.

Detailed drawing,
see page 1110.

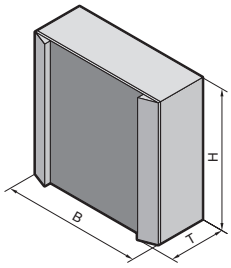
Standard double-bit lock insert may be exchanged for lock inserts, lock cylinder inserts type B or comfort handle, see from page 881, With the designer door at the front, only in conjunction with handle adaptor PC 8611.300, see page 869.			

Accessories Page 832 **Optipanel** Page 170 **TFT monitor** Page 1046

Enclosure for tower PC



Compact enclosure, ready to connect. Standard commercially available tower PCs, up to W/H/D: 250 x 530 x 600 mm (max. 20 kg) may be attached securely to the base screw fastened to the door using the retaining strap supplied loose. The rear interfaces of the PC are readily accessible with the door open. Because the socket strip and fan-and-filter unit are already pre-installed, the enclosure is ready for immediate use.

Roof prepared for mounting
- of worktop IW 6902.310/IW 6902.320
- beneath surfaces

Base prepared for mounting
- of cast feet IW 6902.920
- on surfaces

Material:
Enclosure:
Sheet steel, powder-coated in textured RAL 7035
Door:
Sheet steel, spray-finished in RAL 7015 with fitted design strips of aluminium in RAL 7035.

Protection category:
IP 54 to EN 60 529 (in conjunction with connector gland SZ 2400.300/.500 supplied loose)

Supply includes:
Enclosure of all-round solid construction,
door hinged on r/h side, with base screw-fastened to the inside of the tubular door frame to accommodate a tower PC, lock with fitted cam lock at the side.

Rear panel with two cutouts for use of the connector gland SZ 2400.300 and .500 supplied loose,
connector for power supply,
retaining strap for securing the tower PC to the base,
side panel, left, with fitted outlet filter SK 3322.200,

Side panel, right, fitted with:
- Fan-and-filter unit SK 3322.107, technical description see page 636, with door operated switch PS 4315.500
- Supply socket for 230 V power supply
- Socket strip with 3 sockets and overvoltage protection.

Material:
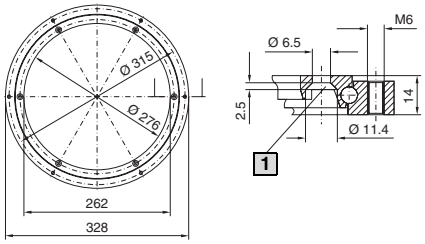
Cast aluminium, powder-coated

Colour:
Black

Supply includes:
Assembly parts for screw-fastening on both sides.

Packs of	Model No. IW
1	6902.620



1 For csk screw M6

Optipanel

A stylish enclosure of extruded aluminium section. In installation depths 50, 100 and 150 mm the width and height are sized to the panel supplied by the customer.

For TFT monitors 15″ and 17″ with safety glass or touch screen, see page 1046, standard sizes are available off the shelf.

Full details of the Optipanel from page 170.

Support arm system CP-L

Using support section CP-L, operating housings may be positioned in a rotatable and swivelling configuration depending on the respective ergonomic conditions, see from page 200.

Compact Panel

For slimlline and compact panels, or as a visually appealing switch housing.
Thanks to the tiltable enclosure attachment IW 6902.670, see page 193, may also be fitted via support arm system CP-L on worktops prepared for enclosure attachment CP-L, Ø 130 mm, see page 206.

Full details of the Compact Panel from page 183.

Vertical section

For subdividing the vertical surface of the Quality Point XL. By locating e.g. TS punched sections with mounting flanges (17 x 73 mm) into the TS punched profile, the simple mounting of system accessories (e.g. utility shelves CP) is supported.
Length: 950 mm

Material:
Sheet steel, 1.5 mm

Colour:
RAL 7035

Supply includes:
Assembly parts.

Packs of	Model No. IW
1	6903.010

Accessories:

TS punched section with mounting flange, 17 x 73 mm, see page 921,
Utility shelves CP, see page 1039.
Snap-on nuts, see page 931.

Accessories

Worktop mat

To protect against damage, and as an anti-slip mat.

Material:
Rubber

Colour:
Black

Drawer

for documents

Under-mounting

For mounting beneath
- Worktop
- Sufficiently large surfaces

For test equipment, pens, production documents etc. Lockable, lock cylinder insert, lock no. 3524 E.

Material:
Drawer housing: Sheet steel
Front: Plastic to UL 94-V0

Colour:
RAL 7035,
front surface RAL 7015,
handle strip RAL 9006.

Protection category:
IP 55 to EN 60 529/10.91
Complies with NEMA 12.

Packs of	Model No. IW
1	**6902.900**

Delivery times available on request.

Accessories:

Cross members for drawer tray,
see page 943.

Drawer

for keyboard and mouse

Bottom-mounting

For mounting beneath
- Worktop
- Sufficiently large surfaces

With mouspad support, pulls out on the left or right, and hinged cable support for secure, pinch-free cable routing.
Sealed cable entry for 3 cables (up to Ø 6 mm).

Material:
Drawer housing: Sheet steel
Front: Plastic to UL 94-V0

Colour:
RAL 7035,
front surface RAL 7015,
handle strip RAL 9006.

Protection category:

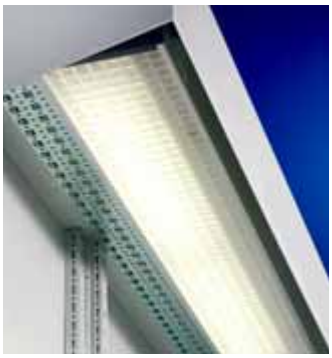
Accessories:

Mouse, mousepad IP 67,
see page 1054.



Workstation light

for IW

For mounting on the IW Quality Point attachment. The workstation light ensures optimum, glare-free illumination of the workstation.

Technical specifications:

2 compact fluorescent lamps (36 W, 230 V, 50 Hz) TC-L 36, cap 2 GL. With switch, sockets and connectors for power infeed and through-wiring.

Supply includes:

Assembly parts

Width mm	Height mm	Depth mm	**Model No. IW**

PC enclosure systems

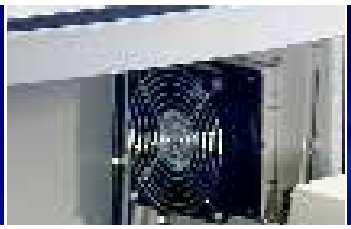
Features

Housing all your computer equipment, from the monitor, computer system, printer and keyboard to the mouse, becomes child's play with Rittal's PC enclosure systems.

The result is perfect protection from humidity and dirt, temperature fluctuations and unauthorised access. What is more, when it comes to ergonomics, design and accessory diversity, these systems will exceed your expectations.

IW enclosure for tower PC

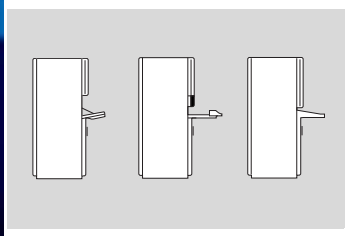
Enclosure ready for connection to accommodate a standard tower PC in the door.



The fan-and-filter unit integrated as standard ensures optimum climate control at protection category IP 54.

The cast feet with twin castors ensure optimum stability and mobility.

PC enclosure systems based on TS 8, bayable



Operated via:
- Folding keyboard
- Keyboard drawer
- Desk section

Monitored with:
- Mounting compartment, large, or
- Glazed door, large, or
- Combination of small glazed door and small mounting compartment

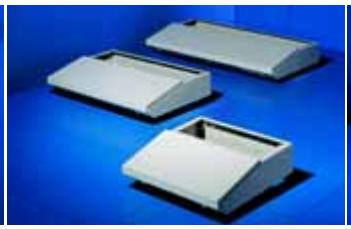
Features

Function and variability are key features of all Rittal console systems. Perfect designs offer added benefits in terms of assembly, security and operation.

The performance capability of a machine or plant is decided at the console and operating unit. Only optimum packaging of today's sensitive controls combined with optimum ergonomic conditions for operating staff can create the pre-requisites for cost-effective plant operation.

Console systems AP



Consoles
with mounting plate, in two heights and three depths for virtually any installation situation.

Desk units
in two depths with perforated strips in the base and cover for easy installation.

Pedestals
with mounting plate, in two depths, also suitable for use as consoles.

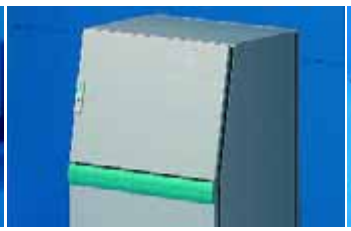
One-piece consoles AP

Cover
including perforated strips for cable routing. Safety lid stay may be unlatched with two-handed operation.

Door hinge
may be swapped from right to left by simply unscrewing the hinges.

Variable installation depth in the cover area
and cable entry from the rear via a mounting plate, height-adjustable by 2 x 40 mm.

Universal consoles AP



Optionally with short or tall door.
Short door offers free field for mounting desk section or keyboard drawer.

High stability and protection category
thanks to a body which is manufactured more or less from a single piece.

Universal interior installation
with partial mounting plates, component shelves, punched sections and rails.

Combination options for the modules

Easy selection of your required combination
The elements of the AP console system in depths 400 mm (blue) and 500 mm (green) may be combined in numerous user-specific variants, as shown in the diagram.
The table opposite allows you to find the order number for your selection immediately.

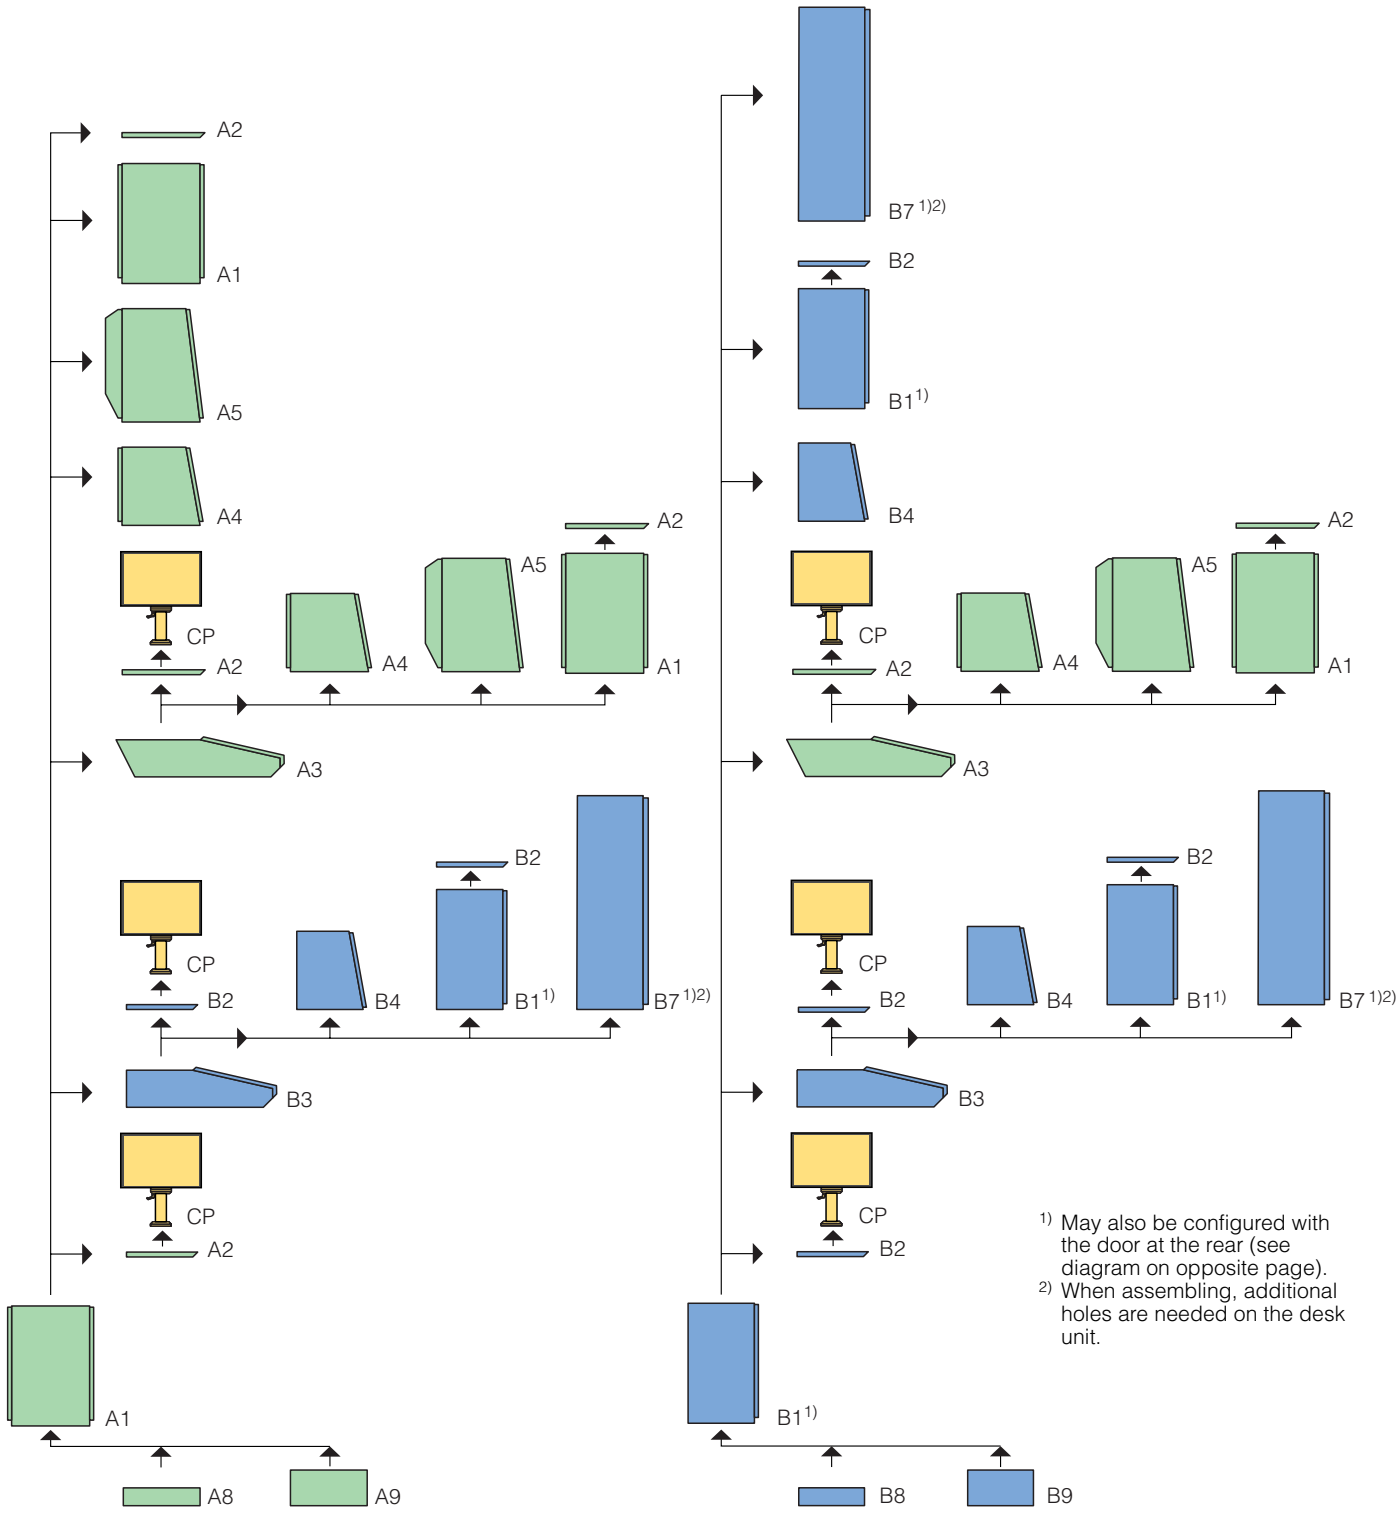
Modern, slimline HMI (human/machine interfaces) or displays may also be used.

Integrated into the stylish, tailor-made command panel systems VIP 6000, Optipanel and Compact Panel (yellow), this produces a wide range of modern extension options for the classic AP console systems.

- VIP 6000, see page 154.
- Optipanel, see page 170.
- Compact Panel, see page 183.
- Support arm systems, see page 188.

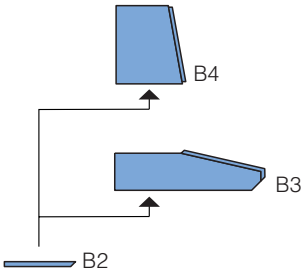
Trim plate (A2/B2) with reinforcement and cutout for support arm systems available on request.

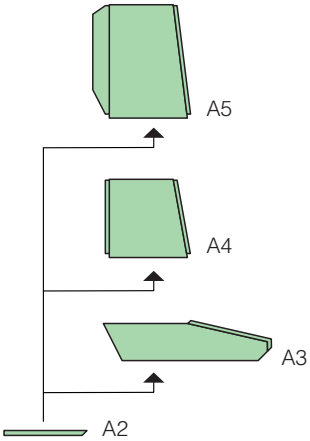
Please specify the dimensions for positioning on the end plate and the Model No. of the enclosure attachment.

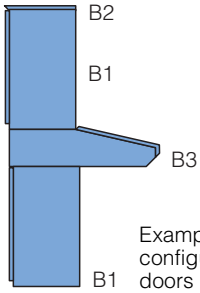


1) May also be configured with the door at the rear (see diagram on opposite page).
2) When assembling, additional holes are needed on the desk unit.

Combination options for the modules







Example of configuration with doors at rear

Further information,
see page 264 – 265.

Technical details,
see page 1116 – 1117.

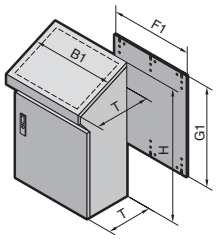
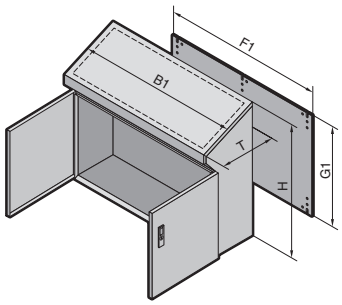
One-piece consoles AP

Sheet steel





Material:
Sheet steel
Enclosure: 1.5 mm
Door and console lid: 2.0 mm
Mounting plate: 3.0 mm

Surface finish:
Enclosure, door and console lid: Dipcoat-primed, powder-coated on the outside
Mounting plate and gland plates: Zinc-plated

Colour:
Textured RAL 7035

Protection category:
IP 55 to EN 60 529/10.91, complies with NEMA 12.

Supply includes:
Enclosure, closed back and sides,
door or double door at front,
console lid with lid stay,
two-piece gland plate,
mounting plate.

Detailed drawing,
see page 1118.

Approvals,
see page 36.

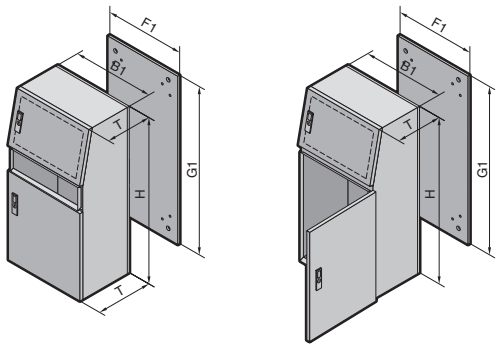
Sheet steel



Material:
Sheet steel
Enclosure, gland plates: 1.5 mm
doors: 2.0 mm
Mounting plate: 3.0 mm
Design strips (AP 2695.500):
Aluminium section

Surface finish:
Enclosure:
Dipcoat-primed, powder-coated on the outside
Mounting plate and gland plates: Zinc-plated

Colour:
Enclosure: textured RAL 7035.
Design strips (AP 2695.500):
RAL 5018

Protection category:
IP 55 to EN 60 529/10.91, complies with NEMA 12.
With a short door at the bottom (AP 2694.500), in order to preserve the protection category, a drawer or desk section (see page 1052/1039) should be fitted.

Supply includes:
Enclosure with doors,
mounting plate,
gland plates,
design strips (AP 2695.500).

Note:
Top door with studs left and right for installing vertical perforated mounting strips SZ 2310.038 and horizontal support strips SZ 2325.000 to be mounted on top (see page 896/895).
AP universal consoles are equivalent to free-standing enclosure ES 5000 in terms of interior installation – in other words, the accessory components will fit.

Detailed drawing,
see page 1118.

Approvals,
see page 36.

Stainless steel

Features

Be it automation, communications or power supply technology, Rittal offers the correct enclosures and cabinets to suit virtually all requirement profiles in modern industrial technology. Of course, these are also available in stainless steel for extremely high standards of hygiene and corrosion protection. Cleverly thought-out system platforms in conjunction with an extensive selection of system accessories provide the basis for the outstanding solution diversity of the Rittal stainless steel range. Why not arrange a consultation? We will tailor a solution to suit your specific requirements.

Resistant to high-pressure cleaning, suitable for use in clean rooms

The compact enclosures **Premium Line KL** and the command panels **Premium Panel** offer a high level of EMC shielding and are resistant to high-pressure cleaning and suitable for use in clean rooms.

Resistant to high-pressure cleaning
The new gap-free sealing concept facilitates the high protection category of IP 69K.

Suitable for clean room use
For the highest standards in the food and hygiene sector (certified by the Fraunhofer-Institut IPA).

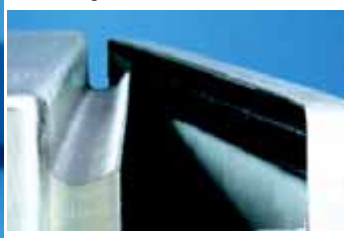
Compact enclosures

Terminal boxes with screw-fastened lid and profile strips with mounting holes on both sides for the installation of cross rails or mounting plate.

Bus enclosure with 180° hinges and built-in support rail.

Premium Line KL
Resistant to high-pressure cleaning, IP 69K and high level of EMC shielding thanks to the sealing system and metallic contact between the enclosure and rear panel.

Compact enclosures



Enclosure protection channel prevents the ingress of dirt and water when the door is opened.

To dismantle the door, the **hinge pin** is simply pulled out of the compact enclosures AE.

Rain canopies for AE offer additional protection.

Features

Command panel

Premium Panel
First-class in terms of sealing, protection, hygiene and design, with or without keyboard housing.

Operating housings
Front panel may optionally be used either for the installation of operating and display components, or as a rear panel.

Command panel housing with door
with handle strips and rear panel with welded studs for the attachment of a mounting plate or support rails.

Consoles

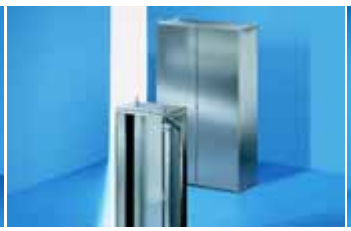
The lid stay of the one-piece consoles is locked against unintentional closure.

Maximum space for cable entry with divided gland plates.

The mounting plate is height-adjustable by 2 x 40 mm, e.g. with deep installed equipment in the lid or cable entry from the rear.

Enclosure systems

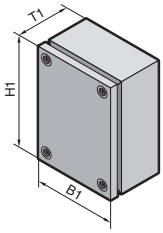
PC enclosure systems with keyboard drawer or with desk section.



Free-standing enclosures ES 5000 with profiled enclosure formed from a single piece (roof + side panel).

Baying systems TS 8 – infinite options for interior installation.

Terminal boxes KL



Material:
Stainless steel 1.4301
Enclosure: 1.25 mm
Cover: 1.25 mm

Surface finish:
Case and cover:
Brushed, grain 180

Protection category:
IP 66 to EN 60 529/10.91, complies with NEMA 4x.

Supply includes:
Enclosure, cover with all-round foamed-in PU seal and cover screws, including plastic bushes.

Approvals,
see page 23.

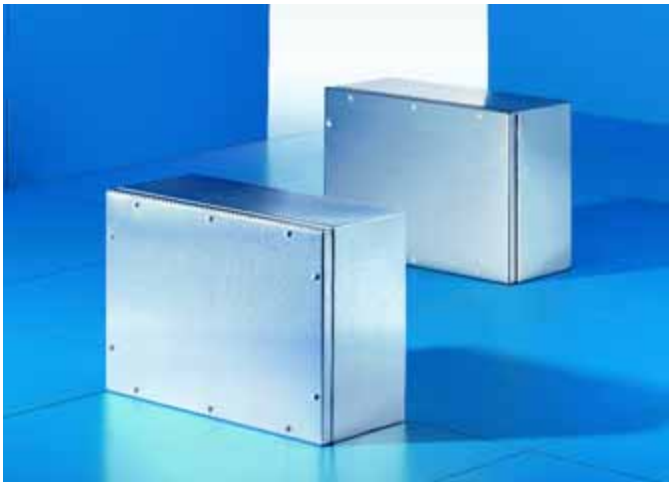
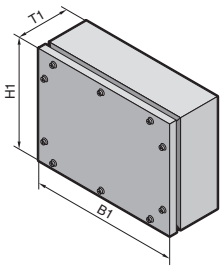
Wall mounting bracket
for secure attachment to the wall.
Model No. see page 905.

Housing coupling
for attaching the 120 mm deep KL to the support arm system.
Model No. see page 278.

Accessories Page 832 **Terminal boxes KL sheet steel** Page 107 **Terminal boxes KL Ex-proof** Page 287

Premium Line KL, protection category IP 69K





A new design, a new concept for the seal and lock

- **Resistant to high-pressure cleaning** (protection category IP 69K). The seal lies between two surfaces and is ideally compressed by the screw fastening (see detailed drawing, page 1119).
- **Suitable for clean room use.** Optional screw fastening to comply with high standards in the food and hygiene sectors: 1 external with hex screws, 2 internal with plastic stoppers.
- **Optimum EMC conditions.** The labyrinthine seal achieves a particularly high level of RF shielding of the enclosure.
- **Accessibility.** Internal rear panel bracket. This solution is clearly superior to external hinges from a hygiene point of view.
- Wall mounting can be implemented directly from the rear using M8 pull-in nuts, or from the front using wall mounting brackets.

Material:
Stainless steel 1.4301, 1.5 mm

Surface finish:
Brushed, grain 240

Protection category:
IP 69K to DIN 40 050-9/5.93

Rittal service:

Other sizes and other enclosures with this sealing concept are available on request. Cutouts and drilled holes to your specifications.

Detailed drawing,
see page 1119.

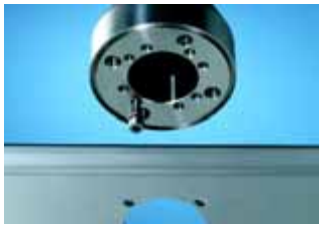
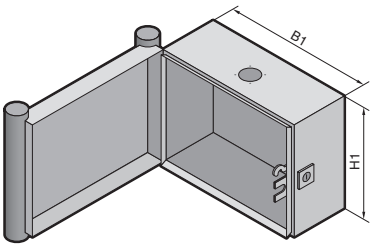
Handle strips
made from plastic approved for use with food, RAL 5002, on request.

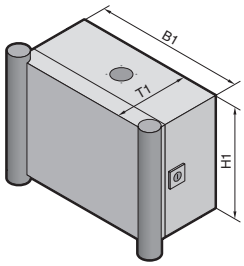


Enclosure attachment CP-S, stainless steel
with prefitted screw for location. Model No. see page 278.

Accessories Page 832 **Support arm system CP-S stainless steel** Page 277

Command panel housing with door





Material:
Enclosure and door:
Stainless steel 1.4301
Handle strips: Plastic approved for use with foodstuffs, similar to RAL 5002 (ultramarine blue).

Surface finish:
Brushed, grain 240

Protection category:
IP 66 to EN 60 529/10.91

Supply includes:
Enclosure of all-round solid construction, with cutout and reinforcement for support arm system,
fastener with guide plate.
Door with sealing frame and side handle strips.
The support arm connection and door hinge may be swapped over by rotating the enclosure.

Rittal service:
Separate keyboard housing, other sizes,
modified support arm cutout or door hinge,
holes and cutouts for switches and operator panels
available on request.

Approvals,
see page 32.

Detailed drawing,
see page 1122.

Accessories Page 832 **Support arm system CP-S stainless steel** Page 277

Support arm system CP-S, stainless steel

In conjunction with stainless steel command panels, terminal boxes 120 mm deep and compact enclosures AE from stainless steel, this support arm system is particularly well-suited for meeting high standards of corrosion protection and hygiene.
The tilting adaptor and enclosure coupling may optionally be mounted on the top or bottom of the enclosure. **They are not suitable for use as the base point of a system.** For this purpose, we recommend wall/base mountings, or with larger heights and widths, an additional pillar made of steel tubing or stainless steel (available on request).

Material:
Stainless steel 1.4305

Protection category:
IP 69K to DIN 40 050-9/5.93
(resistant to high-pressure cleaning)

Load information:
see page 188.

Support section CP-S, stainless steel

Attachment to the connecting components with 2 clamping screws.

Dimensions:
External diameter: 48.3 mm
Wall thickness: 3.6 mm

Material:
Stainless steel 1.4301

Surface finish:
Brushed, grain 240

Other sizes possible on request according to specifications.

Order example:
U-shaped = CP 6660.200
Dimension A = 300 mm
Dimension B = 800 mm
Dimension C = 240 mm

The minimum dimensions must be adhered to, because of the bending radius and insertion depth of the enclosure attachment, housing coupling and wall/base mountings.

Straight
$A_{min.}$ = 100 mm,
A_{max} = 2000 mm

A mm	Weight kg	Model No. CP

Support arm system CP-S

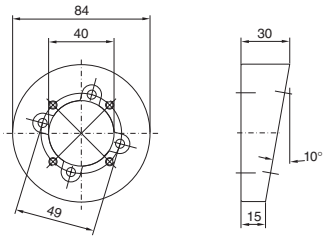
Tilting adaptor, 10° CP-S stainless steel

For mounting between the command panel and
- Enclosure attachment CP 6664.500
  or
- Housing coupling CP 6664.000

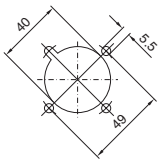
Material:
Stainless steel 1.4305

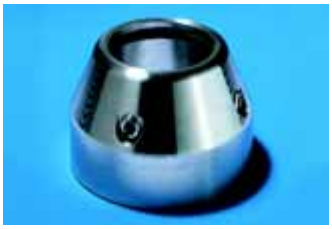
Weight kg	Model No. CP
0.7	**6664.100**

Supply includes:
Seal and assembly parts.



Mounting cutout
Enclosure





Enclosure attachment CP-S stainless steel

For rigid fastening of the enclosure to the support section.

Material:
Stainless steel 1.4305

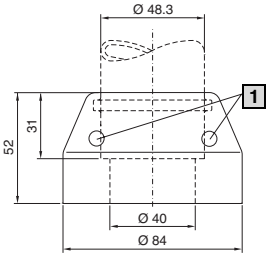
Supply includes:
Seals and 2 clamping screws for support section CP-S, stainless steel.

Note:
For assembly of a pedestal, modular, see page 281, 2 pieces are required.

Weight kg	Model No. CP
1.3	**6664.500**

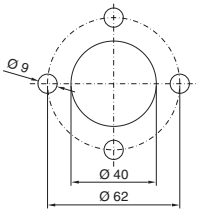
Accessories:

Enclosure reinforcement, see page 281.

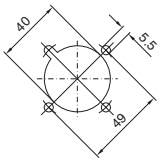


1 Clamping screw

Mounting cutout
for pedestal, bottom



Mounting cutout
enclosure



Housing coupling CP-S stainless steel

For mounting on the vertical part of the support arm system.

Rotation range:
Approx. 350°, lockable via knurled screw.

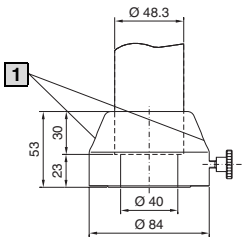
Material:
Stainless steel 1.4305

Supply includes:
Seals and 2 clamping screws for support section CP-S, stainless steel.

Weight kg	Model No. CP
1.1	**6664.000**

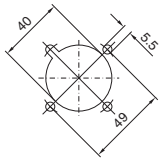
Accessories:

Enclosure reinforcement, see page 281.



1 Clamping screw

Mounting cutout
enclosure



Wall/base mounting, rigid, CP-S stainless steel

For attaching the support arm system to vertical or horizontal surfaces.

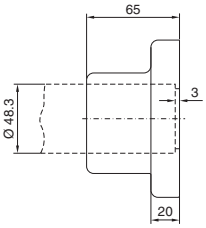
Material:
Stainless steel 1.4305

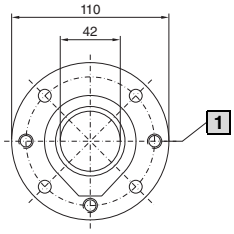
Supply includes:
Seals, 3 adjusting screws to compensate for any irregularities, and 2 clamping screws for support section CP-S, stainless steel.

Weight kg	Model No. CP
1.7	**6663.000**

Accessories:

Wall consoles,
see page 280.





1 Adjusting screw

Mounting cutout

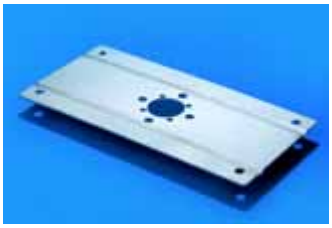
Pedestal, modular, CP-S stainless steel

For the configuration of compact operating stations.

May be compiled from the following modules:	Model No. CP	Page
1 Enclosure reinforcement	**6143.310**	281
2 2 enclosure attachments top/bottom	**6664.500**	278
3 Support section, straight (may be shortened to required length by sawing)		
500 mm	**6660.050**	277
1000 mm	**6660.010**	277
2000 mm	**6660.020**	277
4 Pedestal base plate, small	**6143.300**	281

Detailed drawing,
see page 1123.



Enclosure reinforcement CP-S stainless steel

For external or internal reinforcement of stainless steel enclosures of a corresponding size. Smaller enclosures may also be mounted directly without a flange.

For use with
- Enclosure attachment CP 6664.500
- Housing coupling CP 6664.000

Material:
Stainless steel 1.4301

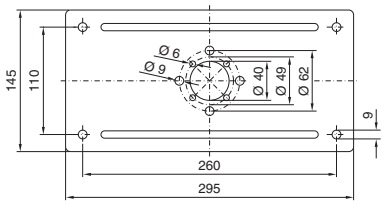
Surface finish:
Brushed

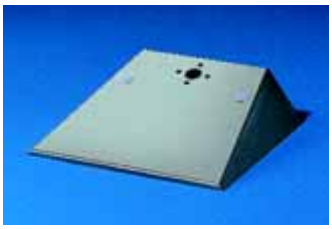
Supply includes:
Assembly parts for the enclosure and support section plus 2 seals.

Packs of	Model No. CP
1	**6143.310**

Accessories:

Enclosure attachment CP 6664.500,
see page 278.
Housing coupling CP 6664.000,
see page 278.





Pedestal base plate, small

With reinforcement bracket for assembling a support section via an enclosure attachment.

- With one hole at the rear for commercially available cable conduit gland M20.
- With two holes at the top (including sealing bung) for lower base attachment cross member.
- Prepared on the inside for a cable clamp DK 7077.000 or DK 7078.000 for strain relief.

Material:
Stainless steel 1.4301

Surface finish:
Brushed

Packs of	Model No. CP
1	**6143.300**

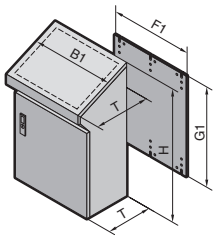
Supply includes:
Assembly parts for enclosure attachment plus seal.

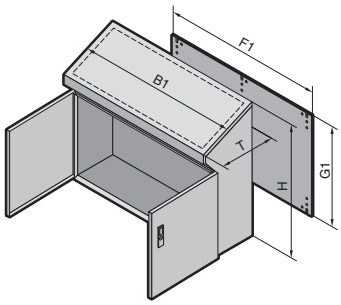
Note:
Commercially available screws up to M8 may be used for floor attachment.

Accessories:

Cable clamp DK 7077.000 or DK 7078.000,
see page 981.

One-piece consoles AP





Material:
Stainless steel 1.4301
Enclosure: 1.5 mm
Door or double door and console lid: 2.0 mm
Mounting plate:
3.0 mm sheet steel

Surface finish:
Enclosure, door and console lid:
Brushed, grain 120
Mounting plate: Zinc-plated

Protection category:
IP 55 to EN 60 529/10.91, complies with NEMA 12.

Supply includes:
Enclosure, solid rear and sides, door or double door at front, with locking rod,
console lid with lid stay and stainless steel cam latched in the enclosure,
two-piece gland plate,
mounting plate, zinc-plated, passivated.

Approvals,
see page 36.

Detailed drawing,
see page 1118.

Ex enclosures

Features

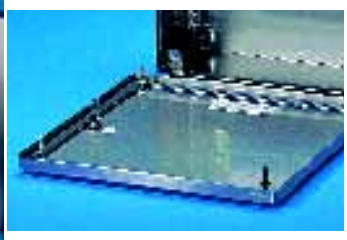
Under ATEX, the requirements placed on Ex enclosures for use in explosion hazard atmospheres are high. For this reason, Rittal refuses to compromise in this area. Enclosure concepts proven a million times over are tailored to the specific Ex requirements. The results is a series of empty enclosures providing ideal conditions for applications in the chemicals and petrochemicals industries, in the offshore sector and in the foods industry.

Baying systems TS 8 prepared for Ex pressurisation,

see page 152.

Rittal Ex enclosures — Individual Ex equipment — Signing-off by a test institute

Ex enclosures, stainless steel



Based on KL
with screw-fastened cover and profile strips with mounting holes on both sides of the enclosure for the attachment of support rails or mounting plate.

Based on AE
with hinged door, cam lock and mounting plate made from sheet steel, zinc-plated.

Blind threaded bushes M8 in the rear panel for wall mounting and side panel for **external connection of a PE conductor.**

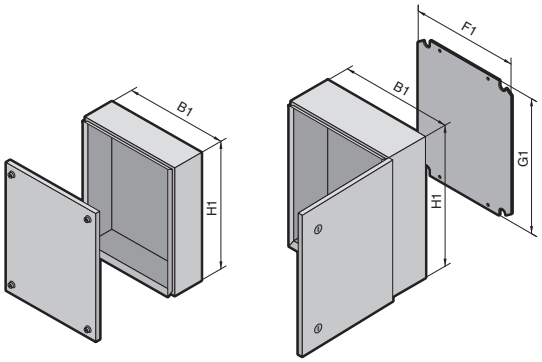
Ex enclosures, plastic

Double seal on top and/or bottom edges of the door thanks to additional, integral rain protection strip.

Attachment from the outside with **wall mounting bracket** 9266.000 into the threaded inserts M8 x 15.

Moulded **bosses** in the door for the attachment of cable routing.

Stainless steel



With screw-fastened lid

Material:
Stainless steel 1.4301

Surface finish:
Brushed, grain 240

Protection category:
IP 66 to EN 60 529/10.91

Supply includes:
Enclosure, lid with all-round foamed-in PU seal.

Certificates:
PTB 03 ATEX 1013U

With hinged door

Material:
Stainless steel 1.4301
Mounting plate: Sheet steel

Surface finish:
Brushed, grain 240
Mounting plate: Zinc-plated

Protection category:
IP 66 to EN 60 529/10.91

Supply includes:
Enclosure, door with all-round foamed-in PU seal, mounting plate.

Certificates:
PTB 02 ATEX 1082U

Approvals,
see page 38.

Detailed drawing,
see page 1119 – 1120.

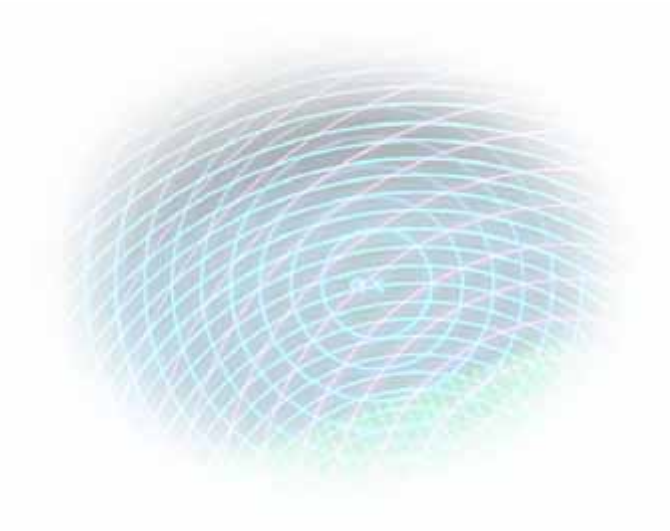
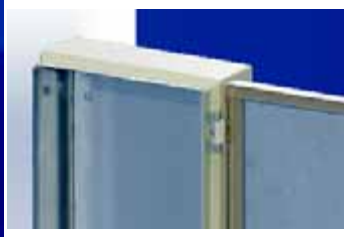
Features



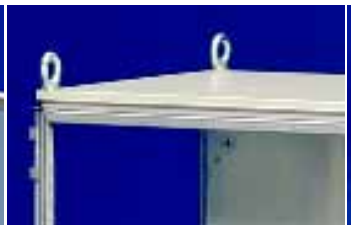
Forward-thinking EMC planning is crucial for the permanent functioning of sensitive electronics.

Electromagnetic compatibility is required of your product. For this reason, our EMC specialists will support you with expert assistance and advice. We can help you to effectively prevent both the inlet and outlet of interference fields into and from enclosures.

EMC enclosures and cases



EMC enclosures: Gland plates are deliberately omitted in order to achieve a high shielding effect.

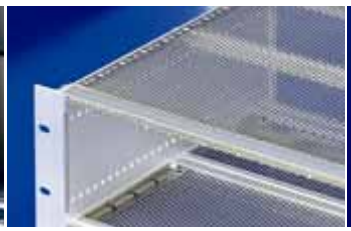


EMC baying system: Frame made from sheet steel with an aluminium zinc surface finish. EMC/IP combination seals ensure slot-free all-round contact.

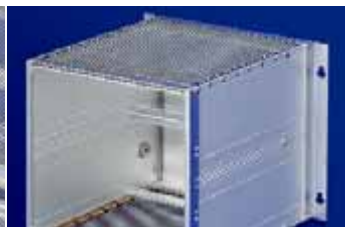
EMC free-standing enclosures: Solid top and sides. EMC/IP seals are attached to the door, rear panel and gland plate.

EMC subracks and systems

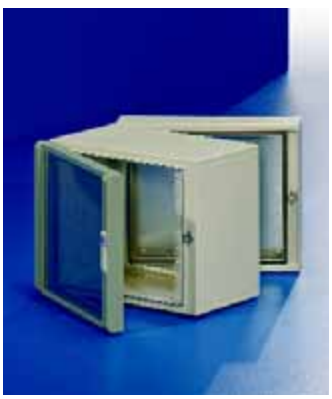
Ripac rack-mounted systems for CPCI and VMEbus, complete with power supply, backplane, climate control, EMC and ESD protection.



Ripac Vario EMC: Vibration and shock-tested subracks equipped for EMC-compatible installation.



Ripac Compact and Ripac Vario Mobil: The EMC specialists for mounting on top-hat rails, mounting plates, or for use in rail vehicles.



EMC electronic enlcosures

Electronic Kombi systems EL: Front door with EMC safety glass, hinged centre part, solid wall unit.

Low-resistance connection between the glazed door and conductive sealing edge ensures a high shielding effect.

Instrument case Vario-Case iS: The plastic base and cover tray are aluminium-coated.

The Rittal EMC concept

Rittal offers excellent pre-requisites for EMC enclosure configurations in the form of its standard sheet steel enclosures, EMC-shielded enclosures, and a practical range of EMC accessories.
Even the standard enclosures offer a good shielding effect against electrical fields which is sufficient for many applications.

Be it closely intermeshed potential equalisation in a standard enclosure to prevent line-bound interference, or extra shielding to protect against high-frequency electromagnetic fields – everything is possible, to suit the individual application.
The large enclosures in the TS 8 series offer "good" shielding, even in the standard version.

For Rittal EMC enclosures with a high level of shielding, excellent attenuation levels and attractive value-for-money products are achieved on the basis of zinc-plated metal surfaces in conjunction with low-resistance EMC shields.
According to EMC legislation, CE labelling is only compulsory for (active) equipment and systems.
Empty enclosures are not subject to the EMC Directive because these are passive components which cannot be furnished with a declaration of conformity with regard to EMC standards.

EMC terminal boxes KL

Material/surface finish:
Sheet steel with aluminium zinc coating, powder-coated on the outside in RAL 7035, interior surfaces conductive.

Protection category:
IP 55 to EN 60 529/10.91.
The EMC version ("high RF attenuation") has been certified by the VDE.

Supply includes:
Enclosure, cover with special seal and cover screws.

Width mm	Height mm	Depth mm	Model No. KL
300	300	120	**1507.750**

Other sizes available on request.

Approvals,
see page 39.

EMC diagram,
see page 293.

EMC E-Box EB

Material/surface finish:
Sheet steel with aluminium zinc coating, powder-coated on the outside in RAL 7035, interior surfaces conductive.

Protection category:
IP 55 to EN 60 529/10.91.
The EMC version ("high RF attenuation") has been certified by the VDE.

Supply includes:
Enclosure with mounting plate, door with special seal including 180° hinge and cam lock with double-bit insert.

Note:
All sizes available on request.

EMC diagram,
see page 293.

EMC compact enclosures AE

Material/surface finish:
Sheet steel with aluminium zinc coating, powder-coated on the outside in RAL 7035, interior surfaces conductive.

Protection category:
IP 55 to EN 60 529/10.91.
The EMC version ("high RF attenuation") has been certified by the VDE.

Supply includes:
Enclosure with mounting plate, door with special seal (130° hinge) including cam lock with double-bit insert.

Width mm	Height mm	Depth mm	Model No. AE
380	380	210	**1380.750**
600	380	210	**1039.750**
600	600	210	**1060.750**
800	1000	300	**1180.750**

Other sizes available on request.

Approvals,
see page 39.

EMC diagram,
see page 293.

EMC baying systems TS 8

Material:
Sheet steel with aluminium zinc coating
Door: 2.0 mm
Rear panel: 1.5 mm
Mounting plate: 3.0 mm

Surface finish:
Framework, door, rear panel and roof plate of sheet steel with an aluminium zinc coating, spray-finished on the outside in RAL 7035 and unpainted on the inside.

Protection category:
IP 55 to EN 60 529/10.91.
The EMC version ("high RF attenuation") has been certified by the VDE.

Supply includes:
Enclosure frame with door,
rear panel and roof plate removable,
r/h door hinge, may be swapped to opposite side,
4 eyebolts, fitted,
mounting plate,
three-piece gland plates.

Note:
All sizes and side panels available on request.

Property rights:
European patent no. 0 857 406
with validity for
CH, ES, FR, GB, IT, NL, SE
US patent no. 6,384,323
Japanese patent no. P 3 193 059

Also required:
EMC baying seal TS 8800.690,
see page 959, with bayed enclosure suites.

Approvals,
see page 293.

EMC diagram,
see page 293.

EMC free-standing enclosure ES 5000

Material:
Sheet steel with aluminium zinc coating
Enclosure body: 10-fold profiled
Door: 2.0 mm
Rear panel: 1.5 mm
Mounting plate: 3.0 mm

Surface finish:
Enclosure body, door and rear panel of sheet steel with aluminium zinc coating,
painted in RAL 7035 on the outside and unpainted on the inside.

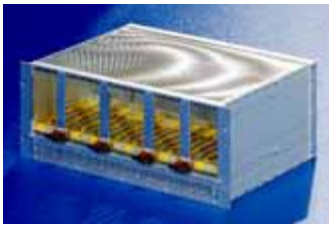
Protection category:
IP 55 to EN 60 529/10.91.
The EMC version ("high RF attenuation") has been certified by the VDE.

Supply includes:
Enclosure, solid top and sides, removable rear panel,
r/h door hinge, may be swapped to opposite side,
2 eyebolts, not fitted,
mounting plate,
three-piece gland plates.

Note:
All sizes available on request.

Approvals,
see page 293.

EMC diagram,
see page 293.



EMC subracks Ripac Vario

The Ripac Vario EMC subrack system was developed with consideration for EMC aspects. The subracks are equipped with a conductive surface finish and may be supplemented with additional EMC components such as springs and extrusions. This allows individual EMC requirements to be met, depending on the specific application in question.

Technical specifications:
Overall depth:
245, 285, 305, 345, 405, 465, 525, 585 mm
Installation width: 84 HP
Height: 3 U, 4 U, 6 U, 7 U, 9 U

Testing:
Vibration and shock-tested to:
IEC 600-68-2-6 test Fc
IEC 600-68-2-27 test Ea

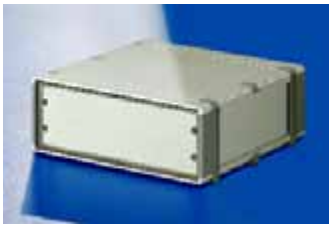
Standards:
Ripac Vario subracks are based on the system dimensions to IEC 60 297-3/-5.

Material:
Side panels: 2.5 mm aluminium
Gland plates and horizontal rails:
Extruded aluminium section
Cover plates: Aluminium

Surface finish:
Clear-chromated

Note:
For further information,
see page 491.

EMC diagram,
see page 293.



EMC instrument case Vario-Case iS

Instrument case for slide-in equipment, 482.6 mm (19″) and modular assemblies.
Width: 534 mm

Material:
Side panels:
Extruded aluminium section, chromated on the inside, painted on the outside
Cover trays:
Plastic to UL 94-V0 (self-extinguishing), with a conductive coating on the inside
Rear panel: 2 mm aluminium, clear-chromated
Front panel: 2 mm aluminium, clear-chromated

Surface finish:
Clear-chromated/spray-finished, RAL 7030/7035

Supply includes:
2 plastic cover trays,
8 enclosure feet (12 with 400 mm depth),
2 side panels,
1 rear panel,
1 front panel,
4 mounting flanges, 482.6 mm (19″),
4 tapped strips,
4 untapped strips,
assembly parts.

EMC diagram,
see page 293.

EMC electronic Kombi system EL, 3-part

Material:
Wall unit and centre part:
1.5 mm sheet steel, yellow-passivated on the inside
Mounting plate:
2.75 mm sheet steel
Front door:
Extruded aluminium section, die-cast aluminium corner connectors, 4 mm safety glass, with EMC mesh.

Surface finish:
Textured stove enamel,
enclosure RAL 7035,
interior surfaces zinc-plated and passivated,
door frame RAL 7033.

Protection category:
IP 55 to EN 60 529/10.91

Supply includes:
1 wall unit, solid,
2 gland plates, solid,
1 centre part, vertically hinged,
2 mounting angles, 482.6 mm (19″), fitted,
1 mounting plate, zinc-plated,
1 front door with EMC safety glass.

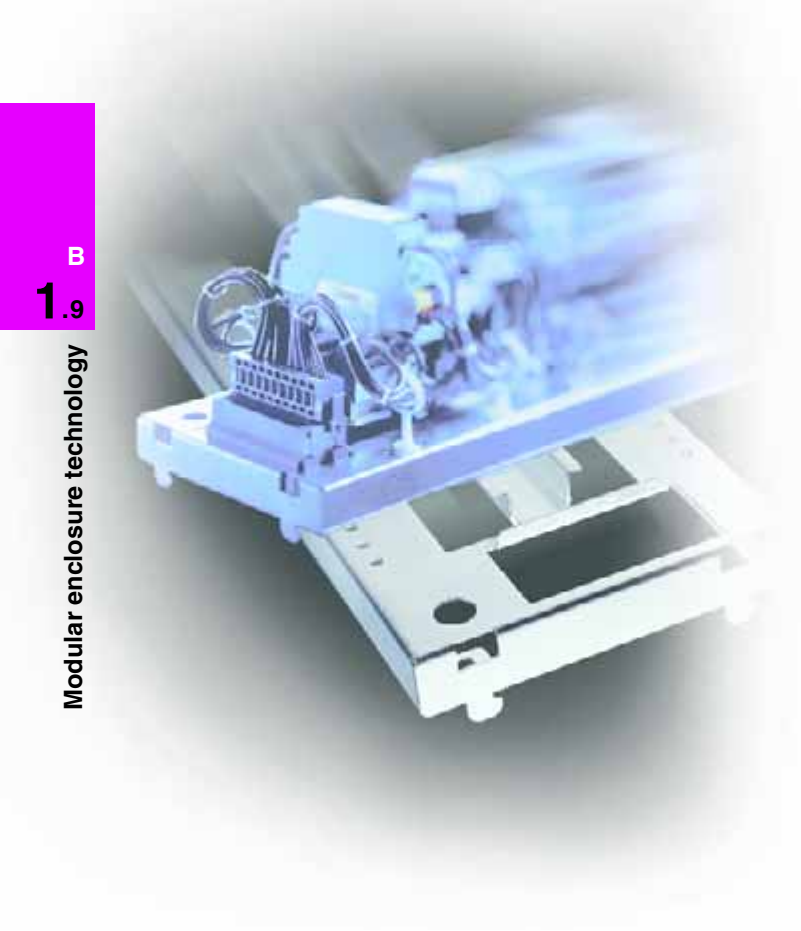
Modular enclosure technology

Features



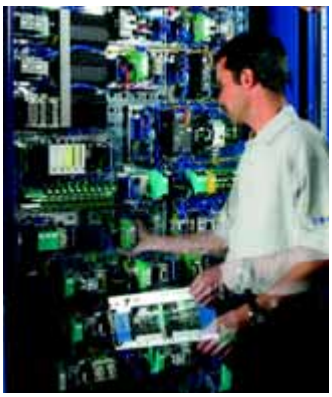
Trumpf, Phönix, Siemens and Rittal are collaborating on a new concept for mechanical and plant engineering.

Rittal supplies cases and enclosures with mounting plates that are specially perforated for module technology.

This helps to significantly reduce design, assembly and throughput times. The full range of modules is available from our partners. In addition, function modules for power supply and for the monitoring of climate control units are currently under development.

More rational, simpler and more secure is the outcome of this new, multi-functional modular system.

Please contact us for further information.

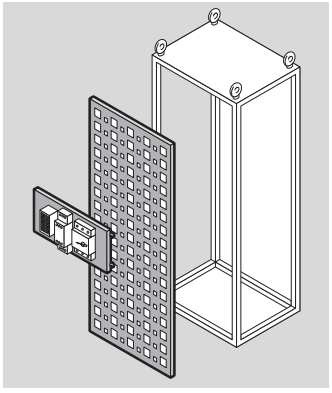


Modules

Function module, machine-neutral, standardised unit, pre-assembled on a module plate. In case of malfunctions, quickly replaced by the user.

A standardised mechnical interface is provided by the module plate. It is simply located into the modular pitch pattern of holes of the mounting plate.

Standardised electrical interfaces are pre-configured, multi-pole bus cables. No need for time-consuming point-to-point wiring and cable ducts.



Enclosures and cases

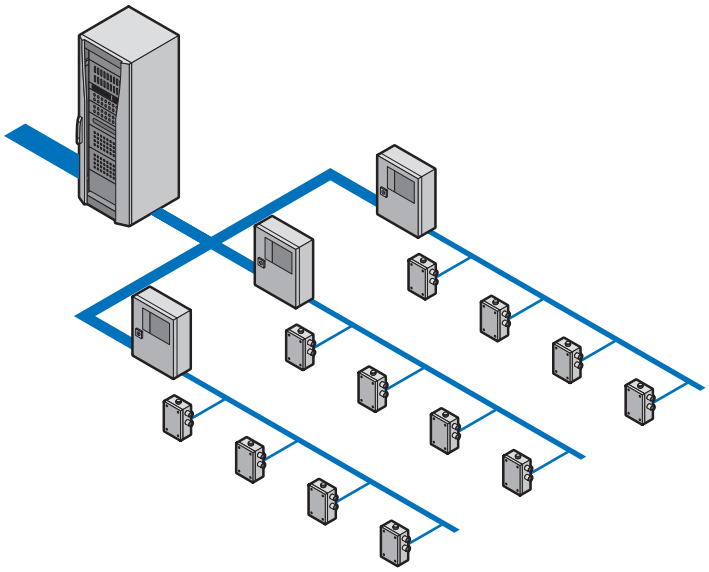
Ethernet infrastructure for production buildings

Building cabling to standard EN 50 173, based on the office sector model, is moving into the production halls. This standardisation of the Ethernet infrastructure simplifies plant modifications, integrates terminal workstations and employee information systems via a plug-in connection, connects machinery and plant to a central monitoring system, and much more besides . . . The successful concept: **Improved efficiency and superior reliability** through information exchange, process coordination and safety monitoring.

Fascinating future!

Ethernet goes factory! Cabling of industrial buildings to standard EN 50 173 (ISO/IEC 11801).

Ethernet infrastructure for production buildings



A concept with innovative enclosures and a comprehensive range of system accessories for outstanding implementation of industrial networks.

For the main distributor: Our extensive rack expertise from the office sector comes into play here.

For sub-distribution: Modified enclosures from the AE and KL series with a protection category tailored to industrial use, equipped with or without patch panel, cable routing supports and cable entry.

Terminal connection boxes: Made from die-cast aluminium in protection category IP 67.

When it comes to future-oriented solutions for modern low-voltage power distribution, you are most definitely on the right track with **Rittal busbar systems.**

Take this example showing the cross-section of a power circuit-breaker panel with main busbar system, cable connection system and connection kits. Achieved with Rittal Maxi-PLS, the modular system for optimum fast assembly.

Power distribution

Busbar systems up to 250 A (40 mm)

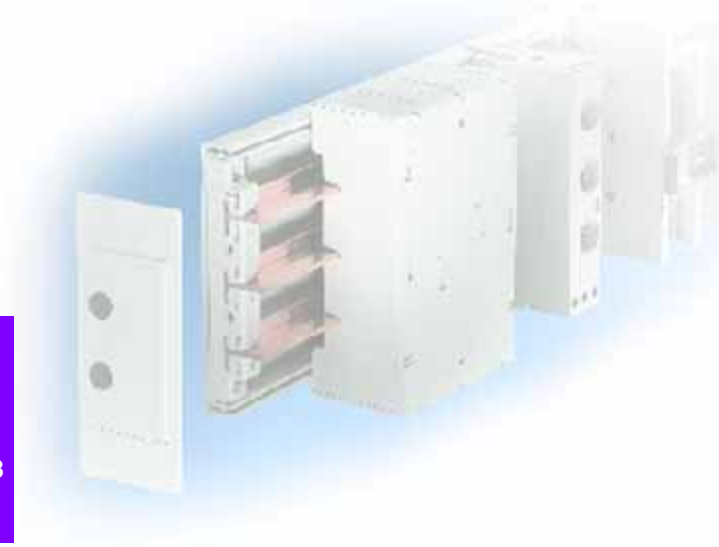
Overview of Rittal Mini-PLS



The Rittal Mini-PLS busbar system with 40 mm bar centre distance is sure to impress, with its unique use of space and fast assembly.

- High static and thermal load capacity thanks to the T-support form of the special rail
- The components are simply plugged in from the front
- Busbar support suitable for top mounting
- Contact hazard protection thanks to all-round accommodation (end cover, base tray and cover section)

Compact

- The special busbars are simply pushed into the one-piece support and locked into position.
- Unrestricted top mounting of the busbar supports and busbar connector sets with top-mounting components.
- Precise-fit installation, because the build height (160 mm) matches the installation space requirement exactly.
- Simple component assembly via plug and lock action from the front.

System components

Mini-PLS end cover
Mini-PLS base tray section

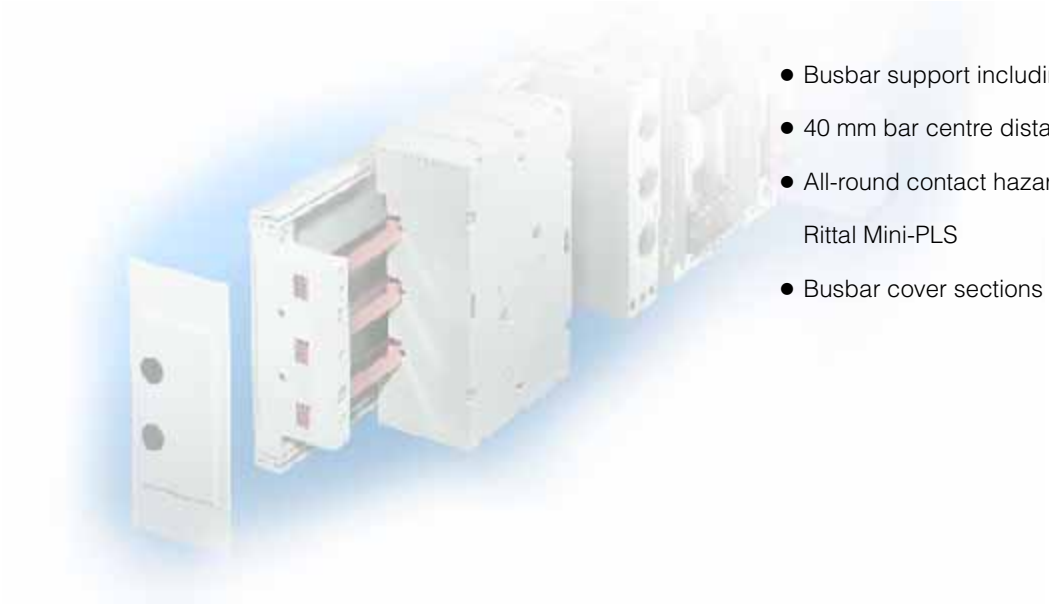
Mini-PLS component adaptor 12/25/40/100 A
Mini-PLS quick-fit component adaptor 25 A (32 A)

NH on-load isolators, size 000

Overview

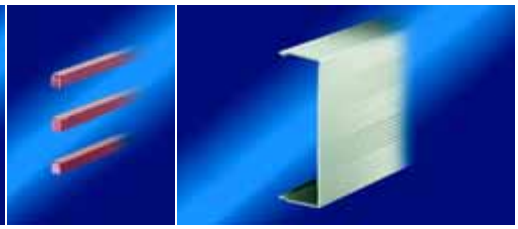


- Busbar support including inserts for flat copper rails
- 40 mm bar centre distance
- All-round contact hazard protection identical to the Rittal Mini-PLS
- Busbar cover sections may be used as an alternative.

System components

End cover
Base tray sections

Busbar support
up to 360 A, 3-pole
Busbars of E-Cu



Busbar cover sections

Cost-effective

- The inserts pre-integrated into the busbar support facilitate the bar accommodation of 12 x 5, 12 x 10 and 15 x 5 mm. Without these inserts, the maximum bar cross-section of 15 x 10 mm is used.
- Simple component assembly via insertion and/or snap-mounting.
- End cover, base tray section and cover section are identical to the Mini-PLS contact hazard protection.

1 Mini-PLS bus-mounting fuse base D 02-E 18

Material:
Polyamide (PA 6.6), 30 % fibreglass-reinforced.
Continuous operating temperature: max. 140°C.
Fire protection corresponding to UL 94-V0.

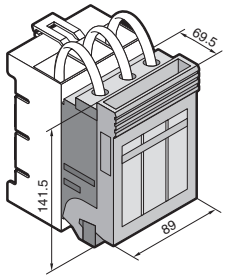
Supply includes:
Cover.

Rated current	63 A
Rated operating voltage	400 V~
Connection of round conductors[1)]	1.5 – 16 mm²
Tightening torque ● Terminal	2.5 Nm
Packs of	1
Model No. SV	**9630.000**

[1)] When using fine wire conductors, wire end ferrules should be used.

Accessories:

Identification labels SV 9320.080,
see page 363.



2 NH on-load isolators size 000

Material:
Isolator lid, contact hazard protection,
isolator chassis:
Fibreglass-reinforced polyamide
Contact tracks:
Silver-plated hard copper

Technical information,
see page 1132.

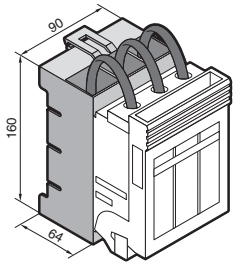
Size	000
Rated current	100 A
Rated operating voltage	690 V~
Cable outlet	top/bottom
Type of connection	Terminal up to 50 mm²
Tightening torque	3 Nm
Packs of	1
Model No. SV	**3431.000**

Also required:

Mini-PLS busbar adaptor,
see page 307.

Accessories:

Micro-switch SV 3071.000,
see page 363.



3 Mini-PLS busbar adaptor

For mounting SV 3431.000 on Rittal Mini-PLS.

Material:
Polyamide (PA 6.6), 30 % fibreglass-reinforced.
Continuous operating temperature: max. 140°C.
Fire protection corresponding to UL 94-V0.

Supply includes:
35 mm² connection cables fitted as standard.

Packs of	Model No. SV
1	**9629.100**

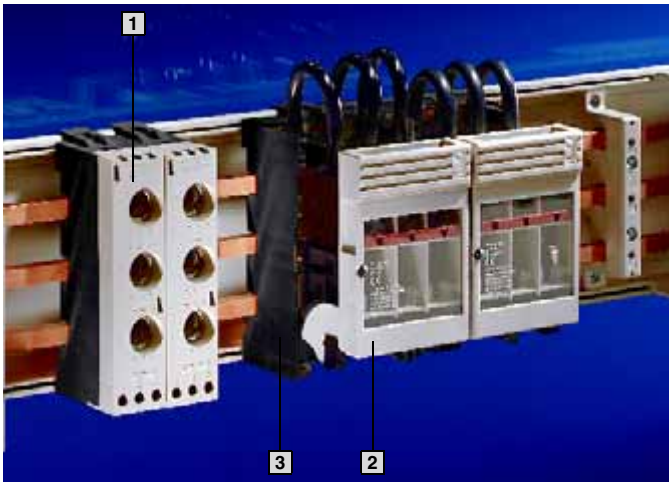
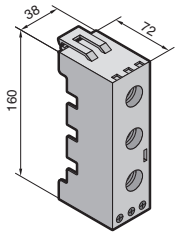
Bus-mounting fuse base/NH on-load isolator





1 Bus-mounting fuse base D 02-E 18

Material:
Polyamide (PA 6.6), 30 % fibreglass-reinforced.
Continuous operating temperature: max. 140°C.
Fire protection corresponding to UL 94-V0.

Supply includes:
Cover.

Accessories:

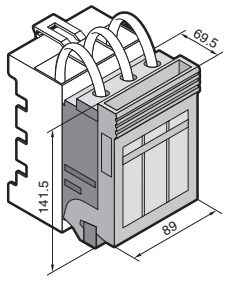
Identification labels SV 9320.080,
see page 363.

Rated current	63 A
Rated operating voltage	400 V~
Connection of round conductors[1)]	1.5 – 16 mm²
Tightening torque ● Terminal	2.5 Nm
Packs of	1
For busbars 12 x 5/10 mm **Model No. SV**	**9350.050**
For busbars 15 x 5/10 mm **Model No. SV**	**9350.500**

[1)] When using fine wire conductors, wire end ferrules should be used.

Also required:

Base tray section,
see page 309.



2 NH on-load isolators size 000

Material:
Isolator lid, contact hazard protection,
isolator chassis:
Fibreglass-reinforced polyamide
Contact tracks:
Silver-plated hard copper

Technical information,
see page 1132.

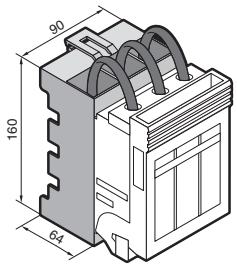
Accessories:

Micro-switch SV 3071.000,
see page 363.

Size	000
Rated current	100 A
Rated operating voltage	690 V~
Cable outlet	top/bottom
Type of connection	Terminal up to 50 mm²
Tightening torque	3 Nm
Packs of	1
Model No. SV	**3431.000**

Also required:

Busbar adaptor,
see page 311.



3 Busbar adaptor

For mounting SV 3431.000 on 40 mm busbar systems.

Material:
Polyamide (PA 6.6), 30 % fibreglass-reinforced.
Continuous operating temperature: max. 140°C.
Fire protection corresponding to UL 94-V0.

Supply includes:
35 mm² connection cables fitted as standard.

For busbars mm	Packs of	Model No. SV
12 x 5/10	1	**9350.400**
15 x 5/10	1	**9350.410**

Busbar systems up to 800 A (60 mm)

Overview

- Busbar supports 1-pole, 2-pole, 3-pole, 4-pole and 5-pole (combination of 2-pole and 3-pole)
- 60 mm bar centre distance
- By using inserts, the maximum bar accommodation is reduced from 30 x 10 mm to 12 x 5 mm

Overview of Rittal PLS

The outstanding features of Rittal PLS include its consistent space utilisation, impressive safety back-up and contact hazard protection.

- Busbar support suitable for top mounting
- High static and thermal load capacity, thanks to the special styling of the profile
- Optimum heat dissipation, thanks to the large surface area of the special copper bars
- Contact hazard protection thanks to all-round encapsulation (end cover, base tray and cover section)

Performance in a confined space
Rittal PLS has two positive spatial advantages over flat copper bars:

- 60 mm bar centre distance with a load of up to 1600 A.
- The special busbars are simply pushed into the one-piece supports and locked into position.
- Unrestricted top-mounting of the PLS busbar support with power distribution components. In other words, free positioning of the support means easier planning, greater stability where required, and more effective space utilisation.

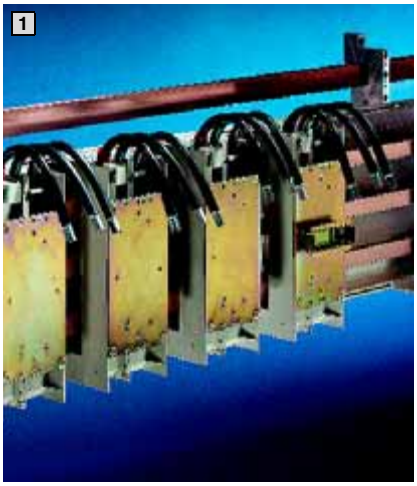
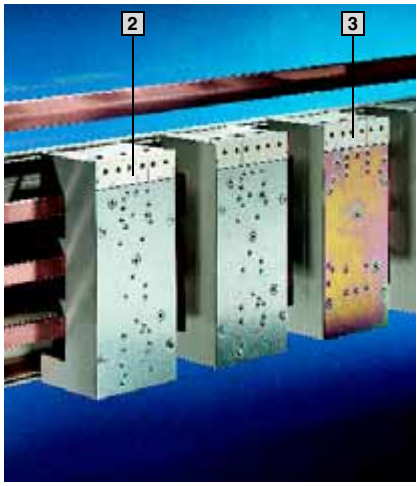
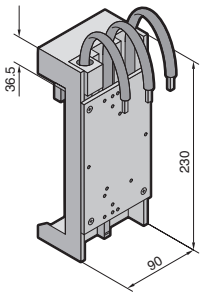
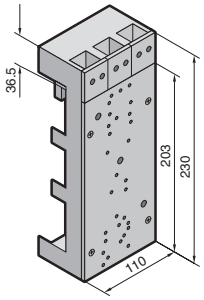
Component adaptor 100 A/160 A







1



2 + 3

Material:
Fibreglass-reinforced, thermoplastic polyester (PBT).
Continuous operating temperature: max. 140°C.
Fire protection corresponding to UL 94-V0.

Note:
The current carrying capacity of the supply cables fitted as standard can be found on page 1128.

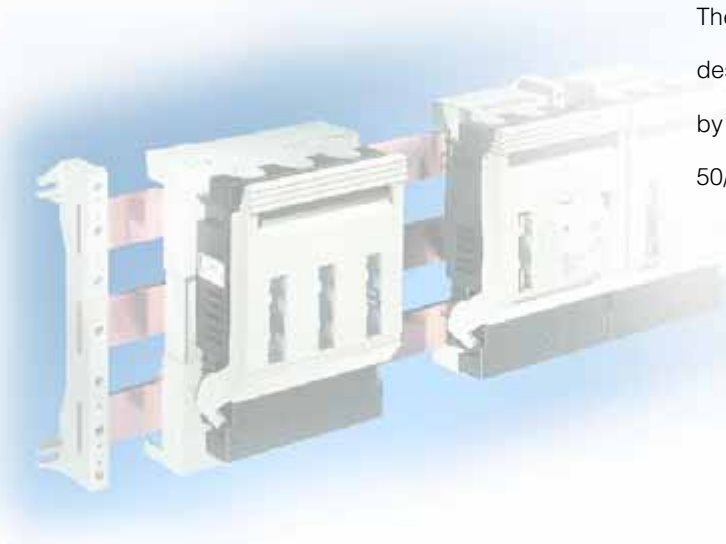
Busbar systems up to 1250 A (100 mm)

Overview



The busbar support with 100 mm bar centre distance is designed for the accommodation of bars 60 x 10 mm; by using inserts the cross-section may be reduced to 50/40/30 x 10 mm.

System components

End cover
